Review and Rebalance

Understanding the 4% Withdrawal Rule

If an investor withdraws a fixed percentage of their assets annually for retirement expenses, what is the likelihood that they will outlive their savings?

Withdrawal Rate	100/0	75/25	50/50	25/75	0/100
3%	100%	100%	100%	100%	84%
4%	98%	100%	96%	80%	35%

Have you heard....

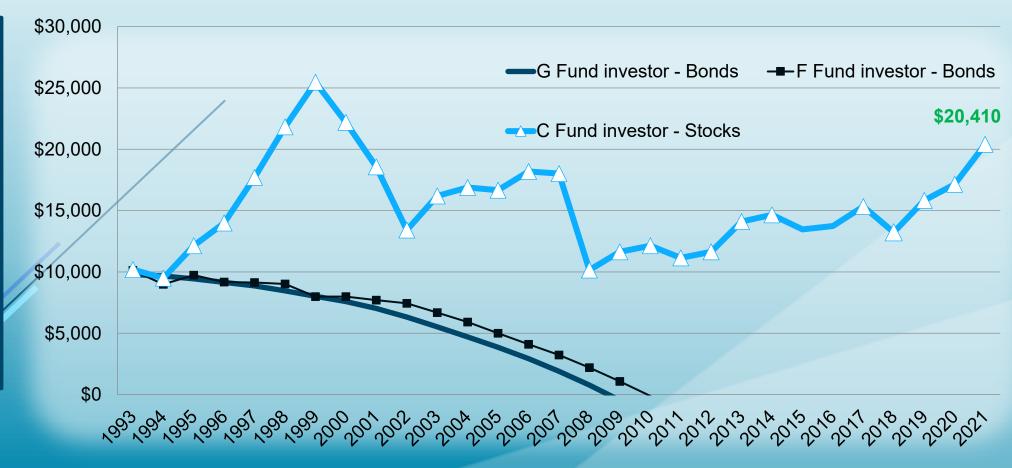

The CLOSER you get to retirement... The MORE conservative you get

Loss of Purchasing Power: What Happens When You Start Spending?

Example:

At the beginning of 1993, retirees Bill, Jack and Mary each have \$10,000 in the TSP. They each invest in one fund: Bill in G, Jack in F and Mary in C.

They annually withdraw enough to buy 2000 first class stamps (after paying taxes of 30%).

Note: This is for illustration purposes only. Past performance is no guarantee of future performance.

All investments involve the risk of loss. The data assumes reinvestment of all income.

Problem: Sequence of Return Risk

What Type of Fed Are You?

Do It Yourselfer

You love coming to financial seminars.

You can't wait to be your own full-time advisor in retirement.

Not Sure

You can handle the finances but not sure you want to.

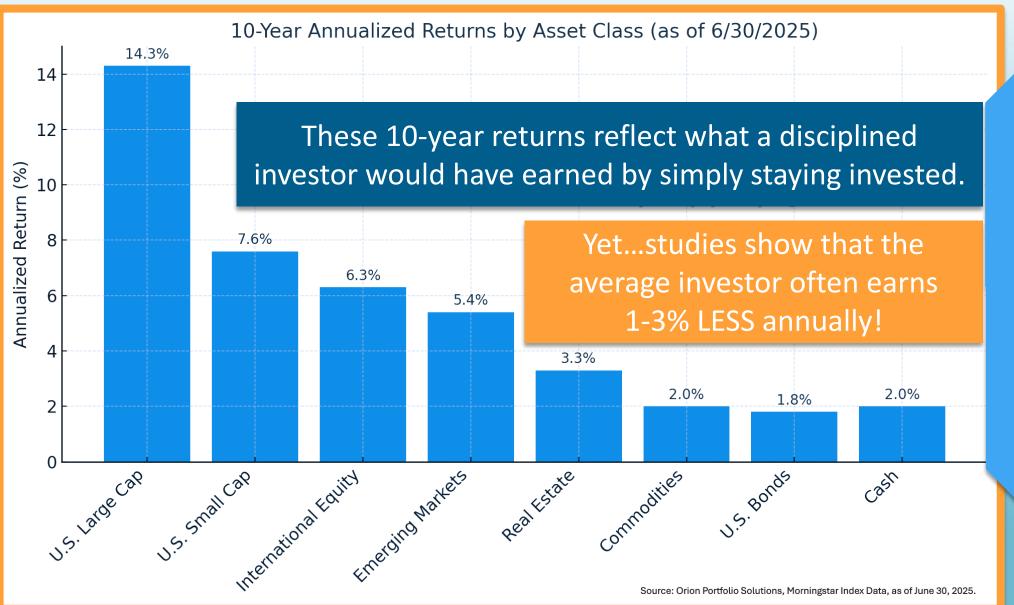

You can tolerate financial speak but unclear if you want to think about this in retirement.

100% I'm Not Doing It!

You are in pursuit of finding the right advisor and relationships matter to you.

Have you ever had someone tell you "Oh it's not hard, you can do it."

Behavior Drives Results
