

Cabinet Features

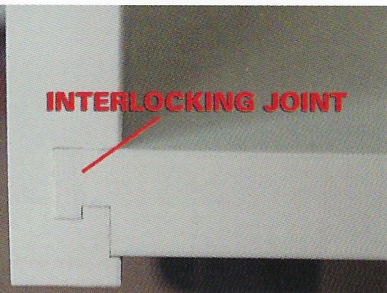

Our cabinets are meant to be outdoors. Our durable, waterproof cabinets are beautiful not only on the outside, but on the inside too. Look closely and you'll see the fine craftsmanship that goes into every cabinet we create. Each impeccably designed cabinet is built to uncompromising standards, using solid High Density Polyethylene (HDPE) that has been engineered specifically for outdoor use.

A WerEver outdoor cabinet truly is **built to last a lifetime.**

★ **Our leveling leg system** allows perfect leveling on sloped or uneven surfaces.

★ **Interior shelves are easily adjustable** with movable pins and a notched design that keeps the shelves from sliding forward.

★ **We use proprietary interlocking joints** which eliminate supporting hardware that could rust or fail outdoors.

★ **Optional toe kick panels** conceal the adjustable legs and are easily removed for cleaning.

★ **Stainless steel connectors** are used to secure adjacent cabinets and are easy to install.

★ **Our unique HDPE to HDPE drawer slides** are hardware-free, glide smoothly, and won't wear out. Hardware-free means there are no metal slides to rust or collect debris.
