

Reconstruction Guide

Validate from the extracted archive root:

```
""bash
python3 scripts/validate_memory.py
""
```

Inspect the memory:

```
""bash
python3 -m json.tool memory/memory.json
""
```

For reconstruction, load:

1. `config/SYSTEM\_PROMPT.txt`
2. `memory/memory.json`
3. `memory/PERSONA.md`
4. `memory/PROJECTS.md`

A private repository is not the same thing as encrypted storage. Do not commit passwords, API keys, private keys, recovery codes, authentication cookies, login QR codes, or financial credentials.
