

THE PROBLEM:

- Over one-third of adults 65+ fall each year.
- Majority of falls involve environmental hazards in the home.
- Two-thirds of those who fell will fall again within six months.
- 20-30% of falls cause moderate to severe injuries.

Aaron Home Care recognizes the seriousness of falls and the role our home caregivers play in preventing them.

SOLUTIONS:

Step 1 – Needs Assessment and Home Inspection

Aaron Home Care does a complimentary, personalized needs assessment and home inspection to ensure safety.

Home Inspection Includes:

- Hygiene- Transfer benches, chairs, hand-held showerhead all need to be assessed.
- Grab Bars- Properly installed in high-risk areas.
- Toileting- Procedures and proximity for ease of use.
- Entrances & Pathways- Getting in/out, reducing tripping hazards.

Step 2- Care Giving Training

A caregiver is chosen based on our needs assessment. Aaron Home Care schedules a training session with the client, caregiver, and therapist. This keeps consistency in transfers and exercise while providing a chance to regain a level of independence.

Step 3- Supervising / Monitoring Progress

A formalized Care Plan is developed and monitored via frequent supervisory visits. This tracks complaints and progress to ensure we are providing the best services as promised!
