

What is included in a Becker Installation?

Since 1956, Becker Boiler has specialized in commercial and industrial boiler repair. Our decades of experience and commitment to providing customers with the highest lifetime value have led us to offering the most reliable and cost-effective solutions. As part of this commitment, all Becker Boiler installations include the following unless otherwise specified.

High-Efficiency Boiler

With 97-98% efficiency—maximizes energy savings and reduces fuel consumption, lowering your monthly heating bills** (Hot Water Boilers)

Primary & Secondary Piping

A full replacement of primary and secondary piping will ensure proper preheating of feedwater leading to the elimination of thermal shock. Thermal shock is a leading source of premature boiler failure.

Dirt & Metal Protection

Prevents dirt and metal contamination from entering the boiler, minimizes corrosion, reducing costly breakdowns. Reduces expensive emergency service calls and extends system lifespan

Relay Control Board

Provides an easy to diagnose control board with visual LED indication for simplified diagnostics. Enables enhanced in-house troubleshooting and phone support, reducing costly service calls

Bladder-Style Expansion System

Superior to a diaphragm system, this system further reduces air buildup in a boiler system, preventing air locks—pockets of trapped air that block water flow. Air locks are a common cause of 'no heat' service calls and contribute to extreme energy inefficiency.

Premium Piping Materials

Premium piping materials (e.g. Type L copper or better) offer superior durability and corrosion resistance. Less prone to leaks or failures, they enhance system reliability and reduce long-term repair costs.

Code Compliance & Safety

While not always required, all work performed by Becker strictly adheres to boiler-related codes and regulations, including ASME codes, CSD-1 per Wisconsin DSPS, and Section 8 for Unfired Pressure Vessels. This commitment ensures system safety, longevity, and compliance while minimizing liability and the risk of fines or regulatory issues.

1-Year Preventative Maintenance Included

Becker provides ongoing support by including the first year of preventative maintenance with every installation.

Proper Sizing Guarantee

All installations are reviewed by our ASME-certified senior boiler engineers to ensure the boiler, piping, and accessory equipment are properly sized for the application, maximizing efficiency and extending boiler lifespan.
