

## VICE MAYOR ROBERT C. WELSH JR. PARK SURVEY

More than 90 community members participated in the Vice Mayor Robert C. Welsh Jr. Park online survey (previously known as Ludlam Glades Park). Participants evaluated the conceptual site plan as shown on the project website, [www.ludlamgladespark.com](http://www.ludlamgladespark.com), and offered their input on features as shown, additional or different features, and general comments, among other questions. The following responses summarize the feedback gathered during the survey process.

### Q1. Please select your TOP FIVE features for this park:

### Q2. There are a few features that will not be in the park, including a pool, splash pad, dog park, nighttime lighting, restrooms, or enclosed facilities to help maintain the neighborhood experience. What other features, excluding those above, would you like to see included?

- another pier/deck to fish off of
- parking
- Fishing
- keep all mature trees remaining on site; add signage explaining the natural features of the area - esp before canals were dug and the land drained for development
- Canoe launch area
- paddle board rental
- Heavily planted with native plants that are appropriate to the site to enhance environmental values. Be a part of "Connect to Protect".
- More natural open space.
- I would like the playground to not be the exact same as brewer and Dante Fassell for toddlers.
- eaduquadiqdg
- Trees!
- Trees with canopies for shade

- posted bird-watching information advising visitors what birds can be spotted in South Miami.
- Shelter over tot area. No on-site parking, so it caters to local, walkable residents
- Splash pad
- Mature NATIVE shade trees
- native plants
- Rock pit like the one at the University of Miami, Bat houses, native pine trees,
- Racquetball half court
- racquetball court
- why not a splash pad when 6 months of the year are extremely hot?
- Restrooms, perhaps make it a large zen garden where people can go to think and just mentally relax
- Outdoor exercise classes
- Water splash in the kids area
- A “natural” area with native plantings. We need GREEN space—not more impervious asphalt/concrete. A “nature park” instead of a basketball court.
- canoe kayak boat ramp
- N/A
- vending area for drinks/snacks, recycling bins
- Trees
- Bicycle station
- Mini splash pond
- Kayak launch
- A walking or jogging padded pathway around the perimeter
- If you're going to build a basketball court, make a full court/
- Benches and restroom
- Park enclosure
- benches
- designated Bike area and racks, water fountain, permanent hammocks
- cafeteria
- Canoeing & kayaking possibilities
- I'd like to re-vamp the landscape with native plants. The hedge along the street of cocoplums is lovely - this is a native plant with edible fruit, a favorite for making jam! and also for wildlife enjoyment. As a former member of the city's urban landscape committee, I would love to help with the design and execution of plantings (and removals/substitutions).
- Butterfly garden
- A feature spot/mural will be a cool spot for IG selfies. Public wifi.
- Walking trails, dog-free zones
- Walking trail, park benches
- Playground should be covered
- Native plants (trees, shrubs, wildflowers) for nature appreciation
- name tags for Florida native plants and trees
- Please describe playground equipment planned and amount
- NO plastic anything. Plenty of trees. :)
- The existing deck structure probably won't meet code.
- Parking
- Tennis Court

**Q6. Which of the following days would be most convenient for you to attend a virtual community meeting?**

**Q7. Please provide additional comments you may have regarding Vice Mayor Robert C. Welsh Jr. Park.**

- Can't wait!
- parking continues to be a huge concern... how about a joint effort with Ludlam elementary to allow park guest to use their east lot to park. Another option would signage and enforcement to keep people from parking all over our lawns...
- Happy to see that South Miami is adding this park!!
- Very cute idea, but renting gazebos for parties may become problem
- There are too many sterile, difficult to maintain parks that offer no real environmental stability or enhancement. The park should be built with long-term stability and low maintenance as the primary considerations. Avoid the distractions and artificiality of our times, and create something that will provide something positive for the natural environment, the biotic community of people and other creatures and plants, and require little energy inputs or chemicals to maintain.
- There is a really nice half court at brewer a few blocks away, I know this is radical but make it open space to play and enjoy the views of waterfront. Open space is so desirable these days.
- Playground needs to be shaded because of heat and hopefully soft playground turf.
- "A playground is good for the community because we have a lot of kids around. A basketball court is unacceptable. The crowd is completely different, and the house can be more exposed to crimes and unwanted visitors. Coming from the grove, basketball courts are more prone to fights and drugs. Something that I will never like to be close to. We moved recently to the area because is quiet and you know the people around. A park with a basketball court is a game changer.
- I use to live in North Bay Village and in Harbor Island they have a park that is the perfect fit for this community."
- Great idea and much needed!
- A sand volleyball court is far more preferable, more visually appealing, and more versatile than a half basketball court.

- Very excited about the park and looking forward to the process starting!
- The park should be aimed towards the need of the immediate neighborhood residents (south of Sunset, north of US 1). Due to increased traffic and the relatively small size of the lot, I would recommend not building any parking spaces and aim the services for residents living with walking distance.
- water fountain for drinking water would be ideal, swings should be part of the children's playground, grills for grilling.
- Excited to have this space in our neighborhood.
- I am so excited to finally get a park in our neighborhood - which is FULL of young kids! So grateful to the City for doing this. The word has spread and the kids are very excited as well.
- The way you have the features listed is too spread out some should be combined like meandering walkway and trellis and fishing dock could all be under one check then people are free to choose the other less natural features they see as important
- This is sorely needed as we do not have a park in this area for our kids without crossing a major street.
- This park space is something us neighbors have lobbied for years. It should be mainly passive—a "tot lot" with appropriate equipment as well as adult exercise equipment along the meandering path. The small shelters and benches are great for small family socializing. This needs to be mainly passive with a nice passive natural area which provides for greater appreciation of our environment and habitat for neighborhood wildlife.
- Costs please
- Good idea however the parks that are already in south Miami need to be managed and taken care of better
- To build the parking area far from the community houses. Keep it distant from our houses.
- Thank you for seeking input.
- Just concerned about parking space.
- Looks GREAT! We are really excited as it's walking distance to us. There should be signs advising the hours it should be open till
- I am really excited to see this park near our home. Thank you.
- Why would we not have nighttime lighting? I think this could present a safety hazard.
- Keep it simple.
- Restrooms is a must! Specially now days with the virus going around. If you are building pavilions, you rent them for an event. You need restrooms.
- Where would we park?
- Canoe launch
- Try to have mostly native plants
- We are so happy this will be a neighborhood park! I think that a big pavilion for rental is a bad idea, especially since there will be no bathrooms, etc.
- The dimensions of the park are not in this survey.
- Love the concept of neighborhood parks
- Respect flora and fauna
- "We please need to find a safe way for half of the community to get to the park. Manor Lane is not safe for our children or us to walk with strollers.
- Also, without parking facilities available, we should not have rental facilities. This was not the purpose of this park and will only create issues with neighbors. We have large parks for rental options."
- No plastic of any kind, no plastic garbage can liners (recycled, post consumer could work). Encourage re-usable water containers. Any signage should be made from wood. Very relieved to hear there will be no lighting. Miami has become a ghastly light-polluted city. It's awful...fewer stars visible every year. =[
- Initial impression, trying to do too much in the space that's given.
- Plant Cypress along the canal. Pine Rockland's everywhere possible. Nix the black olive
- "like to see variety of flowers . .
- place for meditation would look great too . ."

End of Survey Results
