Mission Networks Business Overview

Mission Networks is a large-scale, platform-agnostic **prime solutions integrator** for **safety-critical** and highly secure network infrastructure and enterprise systems.

Resilient Networks

Providing large-scale, multi-component resilient networks

- Telecommunications
- Multi-sensor networks
- Command and control (C2) systems
- Decision support systems
- Air-to-ground data communications and voice systems
- Fixed wireless and configurable network operations across disparate networks

Enterprise Data & Information Services

Delivering enterprise systems for real-time data and information management over hybrid network infrastructure

- Hybrid cloud architectures for enterprise processing
- Secure data and information management
- Data transformation, automation and dynamic data flows
- Large scale data link
- Cross-domain messaging services

System-of-systems Network Solutions

System-of-system solutions for provisioning and control of mission data flows over disparate networks

- Networked cooperative/non-cooperative surveillance systems
- Multi-sensor network infrastructure
- Cross-domain and integrated networks
- Model-based systems engineering for safety-critical systems
- Turnkey or managed services solutions

Large-scale, platform-agnostic prime solutions integrator

- ✓ Proven performance and quals in environments enabling command and control (C2) operations for the safety-critical National Airspace
- ✓ Flexible business models, adapted to customer preferences
- ✓ Able to bridge the gap between commercial practices and government processes
- ✓ Effective program and contractor management processes

L3Harris and FAA – Decades of Partnership

L3Harris has deployed and is operating/managing First-of-its-Kind Infrastructure Solutions for United States Aviation/Air Traffic Control:

- En-Route Voice Control System for all 21 ACCs in US (Supporting through 2040) - VSCS
- First modernized Flight Plan Filing Interface (civil and military) - NADIN II
- First Internet-Protocol Private Network for Air Traffic Control - FTI
- First integrated ADS-B system, maintains network of 700+ ground stations – SBS/SBS II
- First integrated Controller Pilot Data Link Communications network service – Data Comm
- First centralized System Wide Information Management leveraging FTI backbone – SWIM
- First cloud-based information distribution portal for airspace user access to FAA data – SWIFT Portal

- Awarded in 2007
- Spans 9,443 miles
- Processes 1110+ ATC surveillance sensors located @ 700+ ground stations
- Enabling precise tracking to safely increase airspace capacity
- 30% reduction in accident rates in Alaska
- Includes terrestrial, WAM and Space-based ADS-B

Space-based ADS-B Surveillance

For Aireon, the provider of space-based ADS-B surveillance L3Harris provided technology and support for:

- space sensors/antennas that enable space-based ADS-B
- ground system to receive and process space-based ADS-B

Services: Technology Integrator and Service Provider/
Customer: Aireon
Period of performance: 2012 - present

L3Harris built, owns and operates the largest ATC surveillance network in the world

Thank you!
