

## ***Tanis Technologies - Air Filtration ROI's***

---

1. **100% IMPROVEMENT IN AIR CIRCULATION** : Our units are strategically placed to manipulate every cubic foot of air in the building, every other system will leave dead or stagnate air.
2. **100% improvement in consistent air temperature ceiling to floor and wall to wall** : Because of the fact that all of the air is circulated every 10 minutes, a homogenization of temperature occurs.
3. **Up to 50% reduction in heating costs** : This is caused by the deliberate and continuous air pattern created by the units, any heat produced is immediately distributed throughout the building. Superior Fabrication in upper Michigan saves nearly 75% at their latitude.
4. **Up to 50% savings in heat system maintenance** : Because all of the air is filtered all of the time, contaminants that would degrade the performance and service life of the equipment are removed consistently.
5. **Up to 70% reduction in facility maintenance.**
6. **Long term Improvements in employee health**, including skin issues, immune systems, and respiratory issues, and cancer by removing the occupational hazards that cause them.
7. **A more productive work force** and the ability to attract new employees with far better conditions than competitors
8. **Covid 19 transfer risk reduced** by removing particles it may travel on and maintaining immune systems damaged by long term exposure.
9. **Improved lighting conditions** by removing particles that stop light or lumens from making it to lower levels of the room.
10. **World Class Look to Impress and keep valuable customers improve employee morale.**
