Subject: Pathogen Death Wand Testimonial

03-20-2017

We have a Medical Marijuana Facility and have had mildew problems in the growing rooms. In the past, we have used different types of chemicals along with sulfur burner at night to try and alleviate the problem with some results.

On February 24, 2017, we installed a Pathogen Death Wand product in our Medical growing application, at that time we were fighting the mildew problem. After close monitoring, ten days later, March 6 the mildew has completely vanished. Since March 6, the mildew has not returned.

We are stating another grow cycle and excited to watch the positive effects.

Sincerely

Paul Jones
