

# Michigan Deer Harvest Survey Report 2019 Seasons

Brian J. Frawley

#### **ABSTRACT**

A survey of deer hunters was conducted following the 2019 hunting seasons to estimate hunter participation, harvest, and hunting effort. In 2019, an estimated 540,174 hunters spent 7.5 million days afield. Statewide, the number of people hunting decreased significantly by 2.6% between 2018 and 2019. Hunters harvested about 364,000 deer. Harvest did not change significantly between 2018 and 2019. Statewide, nearly 50% of hunters harvested a deer in 2019. About 22% of hunters took an antierless deer and 36% took an antiered buck. Approximately 16% of deer hunters harvested two or more deer of any type. About 6% of hunters statewide harvested two antlered bucks. Statewide levels of satisfaction with the number of bucks seen and the size of the antlers in 2019 increased significantly from 2018. Statewide, 53% of hunters were satisfied with their overall hunting experience in 2019, which was similar to satisfaction in 2018. About 204,160 hunters used a crossbow during the 2019 archery season, and they harvested approximately 77,375 deer with the crossbow. About 19% fewer individuals purchased a deer hunting license in 2019 than ten years ago in 2009. Although the overall number of license buyers declined from 2009, an increased number of people younger than 12 years of age and people older than 56 purchased a license in 2019. About 11% of the license buyers in 2019 were younger than 17 years old. An estimated 135,717 hunters took 162,329 deer to a commercial meat processor in 2019 (i.e., 45% of the harvested deer). About 45% of hunters supported the late urban archery season that occurred in Macomb. Oakland, and Wayne counties, and about 34% of hunters supported expanding this archery season to their preferred hunting area.

### INTRODUCTION

The Natural Resources Commission (NRC) and the Michigan Department of Natural Resources (DNR) have the authority and responsibility to protect and manage the wildlife resources of the state of Michigan. Harvest surveys are one of the management tools used to accomplish this statutory responsibility. Estimating hunter participation, harvest, and hunting effort (hereafter referred to as estimates) are the primary objectives of these surveys. Estimates derived from harvest surveys and information from deer (*Odocoileus virginianus*) harvest check stations, trends in deer-vehicle collisions, population modeling, and input received from the public are used to monitor deer populations and establish harvest regulations.

Although estimating harvest, hunter numbers, and hunting effort were the primary objectives of the deer harvest survey (Appendix A), this survey also provided an opportunity to collect information about management issues. Questions were added to investigate hunter satisfaction with the 2019 hunting season and deer numbers. Deer hunters were also asked whether they supported the late urban archery season, which was established in 2017. This urban archery hunt occurred during January 2-31, 2020, in Macomb, Oakland, and Wayne counties. Hunters also were asked to report whether they used trail cameras to hunt deer. Hunters were asked to indicate the importance of CWD testing and whether the results of CWD testing affected their decision to hunt. Finally, hunters were asked whether they would pay a nominal fee to have their deer tested for CWD.

CWD was discovered among wild Michigan deer in 2015 (Stewart et al. 2016). CWD is a fatal neurodegenerative disease affecting several species of wildlife in the Cervidae family including white-tailed deer. CWD is considered the most important disease currently threatening North American cervids (Gillin et al. 2018). Although no human CWD infections have been reported, human health authorities recommend that hunters avoid consuming any animal that has tested positive for CWD (Gillin et al. 2018).

Deer were grouped into either an antlered or antlerless deer when developing hunting regulations. Antlered deer included deer with at least one antler three inches or longer, and antlerless deer included deer without antlers and deer with antlers less than 3 inches in length. The type of deer that could be harvested by hunters depended upon the area hunted, hunting season, and license purchased (Tables 1 and 2). During 2019, deer could be harvested primarily during nine hunting seasons: Liberty, archery, regular firearm, muzzleloader, early antlerless, late antlerless, Independence, urban archery, and a disease surveillance hunt.

To harvest a deer, hunters had to possess a hunting license (deer, combination, antlerless, or mentored youth license) (Table 2). A harvest tag was issued as part of the hunting license. Deer, mentored youth, and antlerless licenses included one harvest tag, while combination licenses had two harvest tags.

Hunters could purchase a maximum of two licenses for taking antlered deer. Hunters wanting to harvest only one antlered deer could purchase a single deer license (one kill tag), while

hunters wanting to take two antlered deer could purchase a combination license (two kill tags). Hunters who purchased a single deer license could not purchase a second deer license or a combination license.

If a hunter took two antlered deer, one needed to have at least one antler with four or more points (qualifying points must be at least one inch), except for deer taken by mentored youth hunters or in the 16 counties in the CWD Management Zone. A person with a mentored youth license could use their one harvest tag to take a deer of either sex during the archery, regular firearm, muzzleloader, or Liberty seasons.

Antlerless licenses could be purchased in addition to deer, mentored youth, or combination licenses. Antlerless deer licenses allowed hunters to take antlerless deer during any season with equipment appropriate for the season. The use of each antlerless license was restricted to a single DMU designated at the time of purchase. Antlerless licenses were available for most of the state, except in sixteen DMUs (007, 017, 021, 027, 031, 036, 042, 048, 066, 117, 127, 131, 152, 249, 252, and 349) in the UP. A limited number of antlerless licenses were issued specifically for either public or private lands. Public land antlerless licenses were not available in all DMUs that had private-land licenses. A public-land antlerless deer license was required to hunt antlerless deer on Commercial Forest land. The number of licenses available in DMUs open to antlerless deer hunting was established by the NRC (Appendix B). Hunters could apply for an antlerless license through the drawing, purchase a private land license for selected areas without application, or wait to purchase a leftover license after the drawing, if available.

A private-land antlerless deer hunting license was valid for taking antlerless deer only from privately-owned lands within the DMU specified on the license with landowner permission. A private land license was not valid on land enrolled in the Commercial Forest Act program (Commercial Forest Lands).

An additional discounted antlerless license type was available in 2019 that was only valid on private land in the 16-county CWD Management Zone. This license was available at a reduced cost (\$12 versus \$20); however, it expired on November 3, 2019. This discounted license was created to encourage hunters to take an antlerless deer during an early hunting season. This license did not replace the usual antlerless license. Instead, both antlerless license types were available, and a hunter could purchase both types.

A public land antlerless deer hunting license allowed an individual to hunt for antlerless deer upon publicly-owned lands (including state, federal, and county lands) open to hunting and Commercial Forest Lands within the DMU for which it was issued. A public land license was invalid on any privately-owned lands except Commercial Forest Lands.

Deer Management Unit 487 included all of Alcona, Alpena, Iosco, Montmorency, Oscoda, and Presque Isle counties (DMUs 001, 004, 035, 060, 068, 071, and 452). An individual could purchase up to a season limit of 5 private-land antlerless deer licenses statewide, except for licenses valid in the 16-county CWD Management Zone and DMU 487. For these areas, an individual could purchase a maximum of ten antlerless deer licenses until the quota had been

met. Also, there was no seasonal limit for public land antlerless licenses in any DMU where licenses were available.

The Pure Michigan Hunt (PMH) was a unique multi-species hunting opportunity offered for the first time in 2010. Individuals could purchase an unlimited number of applications for the PMH. Three individuals were randomly chosen from all applications, and winners received elk, bear, spring turkey, fall turkey, and antlerless deer hunting licenses and could participate in a reserved waterfowl hunt on a managed waterfowl area. The antlerless deer hunting license was valid for all areas open for hunting antlerless deer and during all deer hunting seasons in which they were eligible to participate.

Deer Management Assistance (DMA) permits were special antlerless permits issued to landowners where the number of antlerless licenses was insufficient to meet the objective of specific landowners (e.g., controlling crop damage). These permits allowed hunters to take one antlerless deer per permit during any deer season on the land where issued or adjacent private lands with the landowner's permission. To use these permits, the hunter also must have purchased a valid deer hunting license for the season in which they were hunting and abide by all other hunting regulations.

Managed Deer Hunt permits were antlerless permits that could be used during special seasons on some public lands (e.g., state parks, state wildlife areas, and some federal land). These permits were issued by special random drawings. To use these permits, the hunter also must have purchased a valid deer hunting license and abide by all other hunting regulations.

The Liberty Season was held during September 14-15 on public and private lands statewide. Youth (less than 17 years old) and hunters with certain disabilities could take no more than one deer during the season. Eligible hunters to participate in this season included hunters issued a permit to use a laser-sighting device or to hunt from a standing vehicle, veterans with 100% disability or rated unemployable as defined by the United States Department of Veterans Affairs, or people who were legally blind. Hunters could take one deer of either sex using a deer or combination license, and antler point restrictions did not apply to taking antlered deer. Only an antlerless deer could be taken with an antlerless license or DMA permit. Youth less than 14 years of age could hunt with archery and crossbow equipment on public or private lands or with a firearm on private or Commercial Forest lands only. All hunters under age 17 hunting with a firearm had to be accompanied by a parent, guardian or someone designated by their parent or guardian. Also, hunters under 10 years of age had to be licensed through the Mentored Youth Hunting Program and accompanied by a qualified mentor.

The archery season occurred statewide on public and private lands. This season was divided into early and late segments (October 1 through November 14 and December 1, 2019, through January 1, 2020). In addition, a January urban archery hunt also was held for the third consecutive year. This archery season occurred during January 2-31, 2020, in Macomb, Oakland, and Wayne counties. Deer licenses, antlerless deer licenses, combination licenses,

mentored youth licenses, and DMA permits could be used to take deer during the archery seasons using archery equipment.

Deer could also be taken in the Independence Hunt during October 17-20, 2019. Hunters could take one deer of either sex on private lands or public lands requiring an access permit. Hunters could use a deer or combination license, and antler point restrictions did not apply to taking antlered deer. Only an antlerless deer could be taken with an antlerless license or DMA permit. Only hunters that were issued a permit to use a laser-sighting device or to hunt from a standing vehicle; veterans with 100% disability or rated unemployable as defined by the United States Department of Veterans Affairs; or people who were legally blind could participate in this season.

The statewide regular firearm season occurred November 15-30. The muzzleloader season was held December 6-15 in the UP and Northern LP, and December 6-22 in the Southern LP. Hunters could take deer on both public and private lands with mentored youth, deer, and deer combo hunting licenses during the regular firearm and muzzleloader seasons. Antlerless licenses (including DMA permits) also could be used during the firearm seasons.

The early antlerless firearm season occurred on private land from September 21-22. Hunters pursuing deer during this season had to purchase an antlerless or mentored youth license, except for hunters in the CWD Management Zone and DMU 487 which could use any valid deer hunting license to take an antlerless deer. The area open to hunting during the early antlerless season was limited to all or portions of 52 counties in the LP (Alcona, Alpena, Antrim, Arenac, Barry, Bay, Benzie, Calhoun, Charlevoix, Clare, Clinton, Eaton, Genesee, Gladwin, Grand Traverse, Gratiot, Hillsdale, Huron, Ingham, Ionia, Iosco, Isabella, Jackson, Kent, Lapeer, Leelanau, Lenawee, Livingston, Macomb, Manistee, Mason, Mecosta, Midland, Monroe, Montcalm, Montmorency, Muskegon, Newaygo, Oakland, Oceana, Osceola, Oscoda, Ottawa, Presque Isle, St. Clair, Saginaw, Sanilac, Shiawassee, Tuscola, Washtenaw, and Wayne counties). Two additional counties (Arenac and Barry) were open in 2019 than in 2018.

The late antlerless firearm season occurred on private land from December 23, 2019, through January 1, 2020. Hunters pursuing deer during this season had to purchase an antlerless or mentored youth license, except for hunters in the CWD Management Zone and DMU 487 which could use any valid deer hunting license to take an antlerless deer. The area open to hunting during the early antlerless season was limited to all or portions of 59 counties in the LP. All counties open during the early antlerless firearm season were also open for the late antlerless firearm season, as well as seven additional counties: Allegan, Berrien, Branch, Cass, Kalamazoo, St. Joseph, and Van Buren. One additional county (Alpena) was open in 2019 than in 2018.

A January firearm deer hunt occurred during January 3-6 and January 10-13 in portions of Alpena County. This special hunt was created to help with disease surveillance (i.e., bovine tuberculosis). The hunt was only held on private land and only antierless deer could be harvested. Antierless deer could be harvested with a deer license, deer combination license, or private land antierless deer licenses for DMU 487.

Crossbows were legal to use during all archery and firearm seasons statewide, except in the UP, where crossbow use was prohibited during the late archery and muzzleloader seasons, unless the hunter was disabled.

#### **METHODS**

The Wildlife Division provided all hunters the option to report information about their deer hunting activity voluntarily via the internet. This option was advertised through the hunting regulation booklet (digest) and on the DNR website, and an email message was sent to all license buyers that had provided an email address to the DNR (172,869). Hunters reported whether they hunted, the days spent afield, and whether they harvested a deer. Deer hunters were also asked whether they used a trail camera to hunt deer, whether they supported the late urban archery season that was created in 2017, and to indicate how important CWD testing was in determining whether they hunted deer. Following the 2019 deer hunting seasons, a questionnaire (Appendix A) was sent to 61,463 randomly selected individuals who had purchased a hunting license (deer, antlerless, mentored youth, or combination deer hunting licenses) and had not already voluntarily reported harvest information via the internet. Hunters receiving the mail questionnaire were asked the same questions as asked via the internet. Hunters were instructed not to report hunting effort and harvest associated with DMA permits because landowners obtaining these permits already were required to report the number of deer harvested to the DNR.

Estimates were based primarily on information collected from random samples of hunting license buyers. Thus, these estimates were subject to sampling errors (Cochran 1977). Estimates were calculated using a stratified random sampling design (Cochran 1977) and were presented along with their 95% confidence limit (CL). In theory, this CL can be added and subtracted from the estimate to calculate the 95% confidence interval. The confidence interval is a measure of the precision associated with the estimate and implies the true value would be within this interval 95 times out of 100. Unfortunately, there are several other possible sources of error in surveys that are probably more serious than theoretical calculations of sampling error. They include the failure of participants to provide answers (nonresponse bias), question-wording, and question order. It is very difficult to measure these biases.

License buyers were assigned to one of five groups (strata) based on the type of license purchased and season that it was valid. The first stratum consisted of people eligible only for the archery, regular firearm, and muzzleloader hunting seasons (N = 371,780). The second stratum consisted of people eligible to hunt during archery, regular firearm, muzzleloader, early antlerless, and late antlerless seasons (N = 168,085). The third stratum consisted of people eligible to hunt during archery, regular firearm, muzzleloader, late antlerless, and Liberty seasons (N = 31,626). The fourth stratum consisted of 8,305 people that were eligible to participate in the special disabled hunts. Beginning in 2013, veterans with disabilities could obtain a free deer hunting license (i.e., Disabled Veteran license type). A unique type of hunting license was not available for non-veteran hunters with disabilities; however, hunters with disabilities younger than 65 years were sold a discounted hunting license (i.e., sold a

senior hunting license). The fifth stratum consisted of 5,006 people that had voluntarily reported information about their hunting activity via the Internet before the random sample was selected. The random sample consisted of 29,335 people from the first stratum; 13,547 from the second stratum; 10,495 from the third stratum; and 8,307 from the fourth stratum. The stratified sampling design accounted for the varying probabilities of being selected from the strata so estimates could be reliably extrapolated from the sample to all license buyers.

Estimates were calculated separately by the area where the hunt occurred. For consistency with previous surveys, the state was divided into eight areas that closely matched the DNR's previous wildlife management administrative units (Figure 1). The state was also divided into three ecological regions (UP, Northern LP, and Southern LP). These regions generally matched major ecoregions (Albert 1995), except in the UP where two ecoregions were combined. Ecoregions are regions having similar soils, vegetation, climate, geology, and physiography. Estimates were also calculated for each DMU (Figure 2, Appendix C). Deer harvested from unknown locations were allocated among areas in proportion to the known harvest.

Statistical tests are used routinely to determine the likelihood that the differences among estimates are larger than expected by chance alone. The overlap of 95% confidence intervals was used to determine whether estimates differed significantly. Non-overlapping 95% confidence intervals were equivalent to stating that the difference between the means was larger than would be expected 95 out of 100 times if the study had been repeated (Payton et al. 2003).

Questionnaires were initially mailed during mid-January 2019, and one follow-up questionnaires was mailed to nonrespondents. To increase the number of questionnaires returned, respondents that returned their questionnaire promptly became eligible to win a firearm or bow. Although 61,684 people were selected to receive a questionnaire, 1,629 surveys were undeliverable resulting in an adjusted sample size of 59,834. Questionnaires were returned by 25,070 people (42% adjusted response rate). In past years, two follow-up questionnaires were mailed to nonrespondents; however, only one follow-up survey was sent this year because the governor had issued restrictions on state government spending (Executive Directive 2020 - 03) as a result of the spread of the novel coronavirus (COVID-19) in Michigan. Thus, the adjusted response declined from 47% to 42% between 2018 and 2019.

Estimates of harvest, hunting effort, and hunter participation are affected by the willingness of people to complete and return their questionnaires. This problem can confound comparisons of estimates made between years if response rates vary greatly. The percentage of people returning their questionnaire this year was lower than in previous years. To reduce bias caused by this lower response rate, an adjustment was made on the 2019 estimates to make them comparable to the adjusted 2018 estimates (adjusted to a 74% response rate). Estimates of harvest, hunting effort, and hunter numbers were reduced by 8.8%, 6.6%, and 2.8%, respectively, to make estimates comparable to 2018. These reductions reflected the

average decline noted between estimates calculated when 42% and 74% of the responses were used in 2000 and 2001 surveys.

## **RESULTS AND DISCUSSION**

In 2019, 584,802 people purchased a license to hunt deer in Michigan. The number of people buying a license in 2019 decreased by nearly 3% from 2018 (601,984 people purchased a license in 2018). Most of the people buying a license in 2019 were male (90%), and the average age of license buyers was 45 years (Figure 3). About 11% (61,699) of the license buyers were younger than 17 years old. About 3% (18,906) of the license buyers were younger than 12 years old.

The number of people buying a license in 2019 was about 19% less than the number of people who purchased a license ten years ago in 2009 (725,190 people purchased a license in 2008). There were fewer license buyers for all age classes between 12 and 56 years of age in 2019, compared to 2009 (Figure 4). However, there were increased hunter numbers among the youngest and oldest age classes in 2019. The increased hunter numbers in the oldest age classes likely represented the rising share of older people in the population as the baby-boom generation aged and life expectancies have increased. Also, the legalization of crossbow use during the archery season probably increased participation among hunters in the oldest age classes. The increased participation among the youngest hunters likely reflected the lowering of the minimum age requirements. In 2012, the minimum age requirement was eliminated to hunt deer with a firearm, while hunters had to be at least 10 years old to participate in 2009.

The number of 2019 deer harvest tags sold for all license types combined decreased by 2.0% from 2018 (Table 3). License buyers purchased an average of 2.1 harvest tags. About 91% of the license buyers obtained three or fewer harvest tags, and about 99% had five or fewer harvest tags (Figure 5). Hunters most frequently obtained antierless and combination harvest tags (Figure 6). About 41% of the license buyers purchased at least one antierless license (238,711 people), and greater than 99% of antierless license buyers purchased three or fewer antierless licenses, public and private licenses combined (Figure 7).

The 2019 antlerless license quota on private lands was nearly the same as the quota in 2018 (Appendix B). The quota for public land antlerless licenses increased from 73,835 to 75,080 between 2018 and 2019 (i.e., 2% increase). Overall, the antlerless license quota for private and public lands combined was about the same as last year, but the number of antlerless licenses sold decreased by 1.2% in 2019 (Table 3).

About 92.4  $\pm$  0.3% (540,174 hunters) of the people buying a license in 2019 spent time hunting deer (Table 4). Statewide, the number of people hunting deer during all seasons combined declined significantly by nearly 3% from 2018. Most hunters (475,038) pursued deer during the regular firearm season (Figure 8).

Significantly fewer people hunted during the regular firearm (-2%), muzzleloader (-5%), archery (-5%), late antlerless (-8%), and Liberty (-12%) seasons during 2019 (Table 4). Participation in the archery, early antlerless, Independence, urban archery, and disease surveillance seasons were not significantly different between 2018 and 2019 (Figure 9).

About 49% of the days that hunters spent pursuing deer throughout the state occurred in the archery season (Figure 10). About 40% of the hunting effort occurred during the regular firearm season. Nearly 10% of the hunting effort occurred in the muzzleloader and late antlerless seasons combined. Statewide, hunters devoted an average of 15.0 days afield hunting deer during all seasons combined (Table 5). Archers had the greatest number of days available to hunt deer (77 days) and devoted the greatest number of days afield ( $\bar{x}$  = 13.6 days/hunter) (Figure 11, Table 5). Statewide, the number of days hunting deer during all seasons combined was nearly unchanged from 2018 (Table 4). Significantly fewer days were devoted to hunting during the Liberty (-11%) and late antlerless (-12%) seasons during 2019 (Table 4). Hunting effort was not significantly different in the remaining seasons (i.e., archery, disease surveillance, early antlerless, Independence, muzzleloader, regular firearm, and urban archery seasons). In 2019, the Liberty and early antlerless seasons occurred on different dates, but these seasons occurred concurrently on the same dates in 2018.

About 370,948 deer were harvested statewide in 2019, which was nearly the same number of deer taken in 2018 (Figures 12-13, Tables 6-7). The number of deer harvested decreased significantly in the Liberty (-15%) and early antlerless (-40%) seasons. The differences in the alignment of the seasons between the years may have contributed to the decline in participation in the Liberty season and the declines in the combined harvest during both seasons. Harvest was not significantly changed in the remaining seasons (i.e., archery, disease surveillance, Independence, late antlerless, muzzleloader, regular firearm, and urban archery seasons). Statewide harvests of both antlered and antlerless deer in 2019 for all the seasons combined were not significantly different from 2018 (Table 6). The counties with the greatest harvest densities for antlered and antlerless deer were generally in the central and south-central parts of the state (Figure 14).

About 54% of the deer harvested (sexes combined) in 2019 were taken during the regular firearm season (Figure 15). Nearly 47% of the antlerless deer and 59% of the antlered bucks were harvested in the regular firearm season. Hunters took 32% of the harvested deer (sexes combined) during the archery season. These archers took 29% of the antlerless deer and 33% of the antlered bucks harvested. Few antlered bucks (5%) were taken in the muzzleloader season. The early and late antlerless and muzzleloader seasons combined accounted for about 22% of the antlerless deer harvested.

About 88% of the deer harvested (sexes combined) in 2019 were taken on private lands (Table 8). Statewide, most of the antlerless deer (89%) and antlered bucks (88%) were harvested on private lands.

Statewide, 50% of deer hunters harvested at least one deer (all deer seasons and sexes combined) in 2019 (Figure 16, Table 9), compared to the 49% successful in 2018. About 22%

of hunters took an antierless deer, and 36% took an antiered buck in 2018. About 16% of deer hunters harvested two or more deer.

Hunters were most successful in taking a deer during the regular firearm (37%), Liberty (35%), and archery (34%) seasons (Figure 17, Table 10). Hunter success was lowest in the muzzleloader (19%), disease surveillance (18%), and urban archery (6%) seasons. Nearly 26% of hunters took an antlered buck and 14% harvested an antlerless deer during the regular firearm season.

Deer hunters were asked to report how satisfied they were with (1) number of deer seen, (2) number of antlered deer [bucks] seen, (3) size of antlers seen, (4) number of deer taken, and (5) their overall hunting experience. Statewide, ≤53% of hunters were satisfied with the numbers of deer seen, bucks seen, size of antlers seen, deer taken, and their overall hunting experience in 2019 (Tables 11-13). Statewide levels of satisfaction increased significantly between 2018 and 2019 for the number of bucks seen and the size of antlers seen. People hunting deer only on private lands were generally more satisfied than people hunting exclusively on public lands (Tables 14-16).

About 204,160 hunters used a crossbow during the archery season, and they harvested about 77,375 deer with the crossbow (Tables 17-19). The number of archers using a crossbow in 2019 did not change significantly from 2018 (202,576 archers in 2018). Harvest of deer by archers using a crossbow was not significantly different from last year (74,671 deer taken in 2018). About 33% of these archers using a crossbow in 2019 harvested a deer with a crossbow in the archery season, versus 32% success in 2018.

An estimated 135,717  $\pm$  3,242 hunters took 162,329  $\pm$  4,407 deer to a commercial meat processor in 2019. Thus, about 45% of the deer harvested in all seasons (162,329 of 363,678 deer) were handled by a processor. This proportion is the same proportion of Michigan deer hunters using a processor in 2018 (Frawley 2019).

Among active hunters in Michigan during 2019, 64% (344,736) indicated that they would continue to hunt deer if all processors stopped handling deer because of CWD (Tables 20 and 21). In contrast, 8% of hunters (44,288) would stop hunting deer. About, 24% of hunters (130,018) were uncertain whether they would continue hunting if processors were not available. Also, about 4% of respondents failed to provide an answer, which represents about 20.995 hunters.

About 45% of the deer hunters statewide used a trail camera to monitor deer activity in their hunt area (Table 22), and hunters in the UP more frequently used trail cameras than hunters in the LP. Although UP hunters more frequently used trail cameras, the mean number of days that they used cameras was less than LP hunters (Table 23). These differences appeared to reflect geographic differences in hunting success (Table 10) and the mean number of days of hunting effort (Table 5). Hunters in the UP had lower hunting success than LP hunters; thus, UP hunters were more likely to use trail cameras to improve their hunting success. Although a lower proportion of hunters in the LP used cameras, the hunters in the LP that used trail

cameras had more opportunities to use cameras than hunters in the UP because they had more hunting seasons and longer seasons (Table 1).

Among the hunters using a trail camera, 97% reported they took a picture of a deer (Table 22). Hunters in the UP were more likely to see bear, fisher, marten, and a wolf than hunters in the LP. In contrast, hunters in the LP were more likely to see coyote and fox than hunters in the UP. Furthermore, bobcats were more frequently seen by hunters in the NLP than either the UP or SLP.

An estimated 3,330 hunters pursued deer during the late urban archery season (Table 4), which occurred during January 2-31, 2020, in Macomb, Oakland, and Wayne counties. Statewide, 45% of deer hunters supported having the late urban archery season; however, support was highest among the hunters where the season occurred in the southeast LP (61% supported) (Table 23). Support for expanding this late archery season to other areas of the state was greatest in areas closest to the southeast LP. Lowest levels of support were expressed among hunters in the UP.

Most hunters (82%) statewide indicated that it was important to monitor the status of CWD in areas where CWD was known to exist (Table 26). Furthermore, 45% of hunters indicated that their decision to hunt in these areas was linked to knowing the status of CWD. Hunters indicated that they may stop hunting in areas when CWD infection rates increased (Table 26, Figure 18). If CWD testing was not available and estimated CWD prevalence was low (<1% infection rate), about 14% of hunters would stop hunting in that area. About 24% of hunters may stop hunting in infected areas if the CWD infection rate was moderate (5%), and 45% of hunters may stop hunting if the CWD infection rate was high (>10%).

Several studies have indicated that a greater proportion of hunters may stop hunting deer as CWD infection rates increased in an area (Gigliotti 2004, Needham et al. 2004, Vaske and Lyon 2010), although the potential hunter drop-out rates were generally lower than suggested by Michigan hunters. For example, Needham et al. (2004) reported that 5% of hunters may stop hunting in a state if CWD was restricted to about 10% of the state and about 10% of the deer in this area was infected by CWD, while 49% of hunters may stop hunting deer in the state if about 50% of the deer were infected throughout the state.

The ability to infer the hunter's future hunting activity from survey results may be limited because the hunter's responses often do not match their actual behavior. Actual drop-out rates in other states have been less than 10% when CWD infection rates have been low (Miller 2004, Vaske et al. 2010). Furthermore, long-term studies suggest that the hunter losses diminish over time (Erickson et al. 2019, Xie et al. 2019, Holland et al. 2020, Pattison-Williams et al. 2020). These studies suggest that hunters may become acclimated to the presence of CWD and imply that most hunters will continue to hunt deer if CWD conditions do not dramatically worsen.

An estimated 38% of hunters indicated that they were willing to pay a nominal fee to get their harvested deer tested for CWD (Table 26), although the amount of the nominal fee was not defined. A nominal fee generally means a price that does not reflect the true value of the

underlying item. This price is normally considered easy for a consumer to afford. Among states that charge a fee for CWD testing in 2019, the minimum fee was \$25 (unpublished data).

#### **ACKNOWLEDGEMENTS**

I thank all the deer hunters that provided information. Theresa Riebow completed data entry. The figure of DMUs was prepared by Marshall Strong. Ashley Autenrieth, Mike Donovan, and Chad Stewart reviewed a draft version of this report.

Table 1. Deer hunting seasons in Michigan, 2019-2020.

Season	Bag limit	Area	Dates
Liberty/Youth Hunt	1	Statewide	September 14-15
Early Antlerless Firearm	1 per kill tag	Portions of the LP	September 21-22
Independence Hunt	1	Statewide	October 17-20
Archery	1 per kill tag	Statewide	October 1 – November 14 and December 1 – January 1
Regular Firearm	1 per kill tag	Statewide	November 15-30
Muzzleloader	1 per kill tag	Statewide	December 6-15 (UP & NLP) and December 6-22 (SLP)
Late Antlerless Firearm	1 per kill tag	Portions of the LP	December 23-January 1
Late Urban Archery	1 per kill tag	Macomb, Oakland, and Wayne counties	January 2-31
Disease Surveillance Hunt	1 per kill tag	Portions of Alpena County	January 3-6 and January 10-13

Table 2. Type of deer that could be taken during the 2019 Michigan deer hunting seasons for each combination of season and hunting license.

Type of license (harvest	· ·	Type of deer that could be harvested <sup>a</sup> and area
tag) or permit  Deer license or deer combination regular license	Season Archery seasons	Antlered deerb throughout the Upper Peninsula (Zone 1), and antlerless deer in DMUs open to antlerless deer licenses.
Deer license or deer combination regular license	Archery seasons	Antlerless or antlered deerb in Lower Peninsula (zones 2 and 3)
Deer license or deer combination regular license	Regular Firearm or Muzzleloader seasons	Antlered deer statewide or antlerless deer in DMU 487 and the Core CWD Areac
Deer license or deer combination regular license	Liberty and Independence seasons	Antlerless or antlered deer statewide
Combination Licensed (Restricted harvest tag)	Archery seasons	Deer that has at least 1 antler with 4 or more antler points, 1 or more inches in length, in the Upper Peninsula and antlerless deer in DMUs open to antlerless deer licenses.
Combination Licensed (Restricted harvest tag)	Archery seasons	Antlerless deer or a deer that has at least 1 antler with 4 or more antler points, 1 or more inches in length, in the Lower Peninsula, except antler point restrictions do not apply in the CWD Management Zone or Core CWD Area
Combination Licensed (Restricted harvest tag)	Regular Firearm or Muzzleloader seasons	A deer that has at least 1 antler with 4 or more antler points (1 or more inches in length); Antler point restrictions do not apply in the CWD Management Zone <sup>e</sup> or Core CWD Area <sup>c</sup>
Combination Licensed (Restricted harvest tag)	Liberty and Independence seasons <sup>c</sup>	Antlerless or antlered deer statewide

<sup>&</sup>lt;sup>a</sup>Antlered deer had antlers at least 3 inches in length; antlerless deer included deer without antlers and deer with antlers less than 3 inches in length. Hunters could harvest a maximum of 2 antlered deer per year (all seasons combined).

blf a person took 2 antlered deer during all seasons combined (except Mentored Youth hunters), one of the antlered deer must have had at least 1 antler with 4 or more antler points, each point being 1 or more inches in length.

<sup>&</sup>lt;sup>c</sup>Core CWD area included Ionia, Kent, Mecosta, Montcalm, and Newaygo counties.

<sup>&</sup>lt;sup>d</sup>Combination licenses included two harvest tags (i.e., regular and restricted harvest tags).

<sup>&</sup>lt;sup>e</sup>CWD management zone included Calhoun, Clinton, Eaton, Gratiot, Hillsdale, Ingham, Ionia, Isabella, Jackson, Kent, Mecosta, Montcalm, Muskegon, Newaygo, Ottawa, and Shiawassee counties.

Youth less than 14 years of age could hunt with archery and crossbow equipment on public or private lands or with a firearm on private or Commercial Forest lands only. Hunters could harvest only 1 deer in the Liberty and Independence seasons.

<sup>&</sup>lt;sup>9</sup>Permits for special hunts on designated public lands (e.g., some state parks, game areas, and federal property). These permits valid only during specific dates, which varied among areas. Permits issued to applicants using a lottery (i.e., random selection). To use these permits, the hunter must also have purchased a valid deer hunting license.

Table 2 (continued). Type of deer that could be taken during the 2019 Michigan deer hunting seasons for each combination of season and hunting license.

Type of license (harvest tag) or permit	Season	Type of deer that could be harvested <sup>a</sup>
Mentored youth deer license	Archery , Regular Firearm, Muzzleloader, or Liberty seasons <sup>c</sup>	Antlerless or antlered deer statewide
Mentored Youth	Antlerless seasons	Antlerless deer only
Antlerless License <sup>e</sup>	All seasons	Antlerless deer only
Deer Management Assistance (DMA) permit <sup>f</sup>	All seasons	Antlerless deer only
Managed Deer Hunt permitg	Specified season	Antlerless deer only

<sup>&</sup>lt;sup>a</sup>Antlered deer had antlers at least 3 inches in length; antlerless deer included deer without antlers and deer with antlers less than 3 inches in length. Hunters could harvest a maximum of 2 antlered deer per year (all seasons combined).

blf a person took 2 antlered deer during all seasons combined (except Mentored Youth hunters), one of the antlered deer must have had at least 1 antler with 4 or more antler points, each point being 1 or more inches in length.

<sup>&</sup>lt;sup>c</sup>Core CWD Area included Ionia, Kent, Mecosta, Montcalm, and Newaygo counties.

<sup>&</sup>lt;sup>d</sup>Combination licenses included two harvest tags (i.e., regular and restricted harvest tags).

eCWD Management Zone included Calhoun, Clinton, Eaton, Gratiot, Hillsdale, Ingham, Ionia, Isabella, Jackson, Kent, Mecosta, Montcalm, Muskegon, Newaygo, Ottawa, and Shiawassee counties.

Youth less than 14 years of age could hunt with archery and crossbow equipment on public or private lands or with a firearm on private or Commercial Forest lands only. Hunters could harvest only 1 deer in the Liberty and Independence seasons.

<sup>&</sup>lt;sup>9</sup>Permits for special hunts on designated public lands (e.g., some state parks, game areas, and federal property). These permits valid only during specific dates, which varied among areas. Permits issued to applicants using a lottery (i.e., random selection). Appendix A. Questionnaire used to collect answers for the 2019 Michigan deer harvest survey.

Michigan Department of Natural Resources – Wildlife Division PO Box 30030 Lansing MI 48909-7530

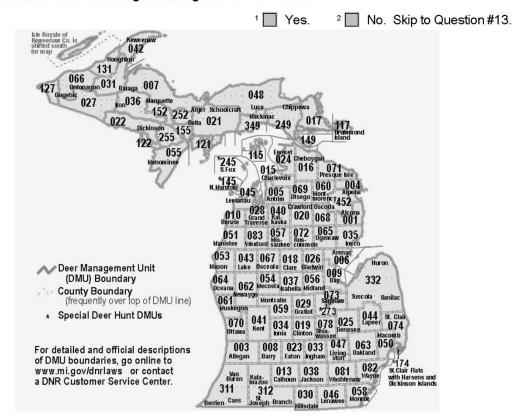

## 2019 MICHIGAN DEER HARVEST STUDY

This information is requested under the authority of Part 435, 1994 PA 451, M.C.L. 324.43539.

It is important that you return this questionnaire even if you did not hunt or harvest a deer. Please report only <u>your</u> hunting activities, and only report taking a deer if <u>your</u> kill tag was attached to it.

1. Did you hunt deer in Michigan during the 2019 seasons?

Questions continued on the next page.

PR2057-18 (Rev. 11/04/2019)

Appendix A (continued). Questionnaire used to collect answers for the 2019 Michigan deer harvest survey.

2. In the following table, please report only <u>your</u> hunting activities and the deer tagged with <u>your</u> deer license. Report harvest and days hunted in different counties on separate rows. For each deer harvested, indicate the type of deer tagged (antlered buck or antlerless), and whether it was taken on public or private land. Antlered bucks have antlers at least 3 inches in length; antlerless deer include deer without antlers and deer with antlers less than 3 inches in length. Do not report hunting effort and harvest taken with Deer Management Assistance Permits.

SEASON HUNTED (Check box if you hunted	(For each sea management uni	ON HUNTED ason hunted, list the t and county hunted on see map on first page.)	NUMBER OF	NUMBER OF DEER HARVESTED (Record by type of deer and land ownership type where each deer was taken.)

<sup>&</sup>lt;sup>a</sup>See Figure 2 for the locations of DMUs.

bNumber of license buyers does not add up to statewide total because hunters could purchase licenses in more than one DMU. Number of licenses sold could exceed the quota because junior licenses sold don't count against the quota.

<sup>&</sup>lt;sup>c</sup>Special deer hunts on public land. Licenses for these DMUs were available on a local basis.

dPortion of a larger DMU.

<sup>&</sup>lt;sup>e</sup>Antlerless license type available in 2019 that was only valid on private land in the 16-county CWD Management Zone. This license was available at a reduced cost (\$12 versus \$20); however, it expired on November 3, 2019.

Appendix C. Estimated number of deer hunters, hunting effort, and deer harvested in Michigan during 2019, summarized by Deer Management Unit.
