

# Michigan Deer Harvest Survey Report 2020 Seasons

Brian J. Frawley

## ABSTRACT

*A survey of deer hunters was conducted following the 2020 hunting seasons to estimate hunter participation, harvest, and hunting effort. In 2020, an estimated 540,174 hunters spent 8.5 million days afield. Statewide, the number of people hunting increased significantly by about 5% between 2019 and 2020. Hunters harvested about 411,000 deer, which was an increase of nearly 13% from 2019. The number of antlered deer taken in 2020 was not significantly different from 2019; however, the harvest of antlerless deer increased significantly by 26%. The increased participation and harvest probably reflected the effects of COVID-19 restrictions that allowed additional people to hunt in 2020. Increased harvest of antlerless deer likely also reflected that hunters with a combination license could take antlerless deer in the entire Lower Peninsula in all firearm and muzzleloader seasons beginning in 2020. Also, the 2020 antlerless seasons included more area and more days than in 2019. Statewide, about 51% of hunters harvested a deer in 2020. About 26% of hunters took an antlerless deer and 35% took an antlered buck. Approximately 18% of deer hunters harvested two or more deer of any type. About 6% of hunters statewide harvested two antlered bucks. Statewide level of satisfaction with the number of deer harvested were unchanged from 2019; however, levels of satisfaction with the number of deer seen, bucks seen, and the size of the antlers in 2020 decreased from 2019. Statewide, 51% of hunters were satisfied with their overall hunting experience in 2020, which was lower than reported in 2019 (53%). Nearly 72% of archers used a crossbow during the archery season (231,000 hunters). These archers harvested approximately 93,000 deer with the crossbow. An estimated 9% of hunters agreed that COVID-19 had made them more likely to buy a license. About 19% of hunters indicated that they increased the amount of time they hunted in 2020 because of COVID-19. About 14% hunted alone more frequently and 8% of license buyers reduced the distance they traveled to hunt. About 5% of hunters indicated that they found it more difficult to locate a hunting area and 8% indicated that they found it more difficult to locate a meat processor to butcher their deer. Deer hunters were asked whether they*

*supported several potential regulation changes. About 48% of hunters supported changing the types of deer that could be taken with the combination license so that only one buck and one doe could be harvested statewide. About 26% of hunters supported eliminating the single deer license. About 51% of hunters supported regional APRs on the buck tag, and about 29% of hunters supported allowing hunters to transfer an unused buck tag.*

## **INTRODUCTION**

The Natural Resources Commission (NRC) and the Michigan Department of Natural Resources (DNR) have the authority and responsibility to protect and manage the wildlife resources of the state of Michigan. Harvest surveys are one of the management tools used to accomplish this statutory responsibility. Estimating hunter participation, harvest, and hunting effort (hereafter referred to as estimates) are the primary objectives of these surveys. Estimates derived from harvest surveys and information from deer (*Odocoileus virginianus*) harvest check stations, trends in deer-vehicle collisions, population modeling, and input received from the public are used to monitor deer populations and establish harvest regulations.

Although estimating harvest, hunter numbers, and hunting effort were the primary objectives of the deer harvest survey (Appendix A), this survey also provided an opportunity to collect information about management issues. Questions were added to investigate hunter satisfaction with the 2020 hunting season and deer numbers. Deer hunters were asked whether they supported several potential regulation changes. The potential changes included (1) changing the types of deer that can be taken with the combination license, (2) eliminating the deer license that only had a single buck tag, (3) adopting regional antler-point restrictions, and (4) allowing hunters to transfer an unused buck tag to another hunter. In addition, hunters were asked to report whether they used trail cameras to hunt deer and report whether they had photographed selected carnivores (bear, bobcat, coyote, fisher, fox, marten, and wolf), deer, and wild pig with their trail camera.

Coronavirus disease (COVID-19) is an infectious disease in humans caused by a newly discovered coronavirus. COVID-19 restrictions were enacted to limit its spread in Michigan during 2020 (e.g., stay at home requirements, travel restrictions, and keeping physical distance), and these restrictions may have impacted deer hunter behavior. Thus, hunters were asked to indicate whether COVID-19 caused them to (1) buy a deer hunting license, (2) spend more time hunting, (3) reduce the distance they traveled to hunt, (4) hunt alone more often, (5) struggle to locate a hunting area, and (6) struggle to locate a processor to butcher their deer.

Deer were grouped into either antlered or antlerless deer when developing hunting regulations. Antlered deer included deer with at least one antler three inches or longer, and antlerless deer included deer without antlers and deer with antlers less than 3 inches in length. The type of deer that could be harvested by hunters depended upon the area hunted, hunting season, and license purchased (Tables 1 and 2). During 2020, deer could be harvested primarily during eight hunting seasons: Liberty, archery, regular firearm, muzzleloader, early antlerless, late antlerless, Independence, and urban archery.

To harvest a deer, hunters had to possess a hunting license (deer, combination, antlerless, or mentored youth license) (Table 2). A harvest tag was issued as part of the hunting license. Deer, mentored youth, and antlerless licenses included one harvest tag, while combination licenses had two harvest tags.

Hunters could purchase a maximum of two harvest tags for taking antlered deer. Hunters wanting to harvest only one antlered deer could purchase a single deer license (one kill tag), while hunters wanting to take two antlered deer could purchase a combination license (two kill tags). Hunters who purchased a single deer license could not purchase a second deer license or a combination license.

If a hunter took two antlered deer, one deer needed to have at least one antler with four or more points (qualifying points must be at least one inch), except in the counties in the core CWD management area (Ionia, Kent, Mecosta, Montcalm, and Newaygo counties in the LP and portions of Delta, Dickinson, and Menominee counties in the UP) and the CWD Management Zone (Barry, Calhoun, Clinton, Eaton, Gratiot, Hillsdale, Ingham, Ionia, Isabella, Jackson, Kent, Lenawee, Mecosta, Midland, Montcalm, Muskegon, Newaygo, Ottawa, and Shiawassee counties). Also, youth hunters (16 years of age and younger) and apprentice hunters (a person who does not have a hunter safety certificate and is 10 years of age or older) were exempted from APRs during all deer seasons.

The mentored youth hunting (MYH) license allowed youth hunters 9 years of age and younger to hunt with an experienced mentor who is at least 21 years of age. A youth with a MYH license could take any deer in most seasons (except Independence season) and deer management unit, except they were required to take an antlerless deer in the early and late antlerless seasons. Antler point restrictions did not apply to hunters with a MYH license.

Antlerless licenses could be purchased in addition to deer, mentored youth, or combination licenses. Antlerless deer licenses allowed hunters to take antlerless deer during any season with equipment appropriate for the season. The use of each antlerless license was restricted to a single DMU designated at the time of purchase. Antlerless licenses were available for most of the state, except in sixteen DMUs in the UP (007, 017, 021, 027, 031, 036, 042, 048, 066, 117, 127, 131, 152, 249, 252, and 349). A limited number of antlerless licenses were issued specifically for either public or private lands. Public land antlerless licenses were not available in all DMUs that had private-land licenses. A public-land antlerless deer license was required to hunt antlerless deer on Commercial Forest land. The number of licenses available in DMUs open to antlerless deer hunting was established by the NRC (Appendix B). Hunters could apply for an antlerless license through the drawing, purchase a private land license for selected areas without application, or wait to purchase a leftover license after the drawing, if available. Beginning in 2020, hunters buying a combination license could also use the two harvest tags to take antlerless deer in the entire Lower Peninsula during the firearm and muzzleloader seasons.

A private-land antlerless deer hunting license was valid for taking antlerless deer only from privately-owned lands within the DMU specified on the license with landowner permission.

A private land license was not valid on land enrolled in the Commercial Forest Act program (Commercial Forest Lands). An individual could purchase up to a season limit of 10 private-land antlerless deer licenses statewide.

A public land antlerless deer hunting license allowed an individual to hunt for antlerless deer upon public lands (including state, federal, and county lands) open to hunting and Commercial Forest Lands within the DMU for which it was issued. A public land license was invalid on any privately-owned lands except Commercial Forest Lands. There was no seasonal limit for public land antlerless licenses in any DMU where licenses were available.

The Pure Michigan Hunt (PMH) was a unique multi-species hunting opportunity offered for the first time in 2010. Individuals could purchase an unlimited number of applications for the PMH. Three individuals were randomly chosen from all applications, and winners received elk, bear, spring turkey, fall turkey, base hunting, and antlerless deer hunting licenses and could participate in a reserved waterfowl hunt on a managed waterfowl area. The antlerless deer hunting license was valid for all areas open for hunting antlerless deer and during all deer hunting seasons in which they were eligible to participate.

Deer Management Assistance (DMA) permits were special antlerless permits issued to landowners where the number of antlerless licenses was insufficient to meet the objective of specific landowners (e.g., controlling crop damage). These permits allowed hunters to take one antlerless deer per permit during any deer season on the land where issued or adjacent private lands with the landowner's permission. To use these permits, the hunter also must have purchased a valid deer hunting license for the season in which they were hunting and abide by all other hunting regulations.

Managed Deer Hunt permits were antlerless permits that could be used during special seasons on some public lands (i.e., St. Clair Flats State Wildlife Area [SWA], Gladwin Field Trial Area, Nayanquing Point SWA, Fish Point SWA, DMU 273 State Game Area, DMU 273 Federal Refuge, and Detroit River Federal Refuge). These permits were issued by special random drawings. To use these permits, the hunter also must have purchased a valid deer hunting license and abide by all other hunting regulations.

The Liberty season was held during September 12-13 on public and private lands statewide. Youth (less than 17 years old) and hunters with certain disabilities could take no more than one deer during the season. Hunters with disabilities that were eligible to participate in this season included hunters issued a permit to use a laser-sighting device or to hunt from a standing vehicle, veterans with 100% disability, or rated unemployable as defined by the United States Department of Veterans Affairs, or people who were legally blind. Beginning in 2020, deaf hunters also were eligible to participate in the Liberty season. Hunters could take one deer of either sex using a deer or combination license, and antler point restrictions did not apply to taking antlered deer. Only an antlerless deer could be taken with an antlerless license or DMA permit.

The archery season occurred statewide on public and private lands. This season was divided into early and late segments (October 1 through November 14 and December 1, 2020,

through January 1, 2021). In addition, a January urban archery hunt also was held for the fourth consecutive year. This archery season occurred during January 2-31, 2021, in Macomb, Oakland, and Wayne counties. Deer licenses, antlerless deer licenses, combination licenses, mentored youth licenses, and DMA permits could be used to take deer during the archery seasons using archery equipment.

Deer could also be taken in the Independence Hunt during October 15-18, 2020. Hunters could take one deer of either sex on private lands or public lands requiring an access permit. Hunters could use a deer or combination license, and antler point restrictions did not apply to taking antlered deer. Only an antlerless deer could be taken with an antlerless license or DMA permit. Only hunters that were issued a permit to use a laser-sighting device or to hunt from a standing vehicle; veterans with 100% disability or rated unemployable as defined by the United States Department of Veterans Affairs; or people who were legally blind could participate in this season. Beginning in 2020, deaf hunters also were eligible to participate in the Independence Hunt.

The statewide regular firearm season occurred November 15-30, and the statewide muzzleloader season was held December 4-13. Hunters could take deer on both public and private lands with mentored youth, deer, and deer combination hunting licenses during the regular firearm and muzzleloader seasons. Antlerless licenses (including DMA permits) also could be used during the firearm seasons. Beginning in 2020, hunters with a combination license could also use the two harvest tags to take antlerless deer in the Lower Peninsula during firearm and muzzleloader season. Also beginning in 2020, the muzzleloader season dates were the same in both the UP and LP. As a result of this consolidation, the muzzleloader season in the SLP during 2020 was seven days shorter than in 2019 (17 days in 2019 versus 10 days in 2020).

The early antlerless firearm season occurred on private land from September 19-20. All license types (i.e., deer, combination, antlerless, mentored youth licenses, and DMA permits) could be used to take an antlerless deer. The area open to hunting during the early antlerless season included the entire LP, except for the island DMUs 145, 245, 115, and 149. Seventeen additional counties (Allegan, Berrien, Branch, Cass, Cheboygan, Crawford, Emmet, Kalamazoo, Kalkaska, Lake, Missaukee, Ogemaw, Otsego, Roscommon, St. Joseph, Van Buren, and Wexford) were open in 2020 than in 2019.

The late antlerless firearm season occurred primarily on private land from December 14, 2020, through January 1, 2021. All license types could be used to take an antlerless deer. In addition, hunters using a muzzleloader could hunt on public lands in the SLP (Zone 3) during the late antlerless season. These muzzleloader hunters on public lands could take either antlered or antlerless deer in Zone 3. All counties open during the early antlerless firearm season were also open for the late antlerless firearm season. Ten additional counties (Cheboygan, Crawford, Emmet, Kalkaska, Lake, Missaukee, Ogemaw, Otsego, Roscommon, and Wexford) were open in 2020 than in 2019. The late antlerless firearm season in 2020 was nine days longer than in 2019 (10 days in 2019 versus 19 days in 2020).

Crossbows were legal to use during all archery and firearm seasons statewide, except in the UP where crossbow use was prohibited from December 1 to March 31 except in the core CWD surveillance area the UP (portions of Delta, Dickinson, and Menominee counties) or unless the hunter was disabled.

## **METHODS**

The Wildlife Division provided all hunters the option to report information about their deer hunting activity voluntarily via the internet. This option was advertised through the hunting regulation booklet (digest) and on the DNR website. Hunters reported whether they hunted, the days spent afield, and whether they harvested a deer. Deer hunters were also asked whether they used a trail camera to hunt deer, whether they supported potential regulation changes, and whether COVID-19 affected their hunting behavior. Following the 2020 deer hunting seasons, a questionnaire (Appendix A) was sent to 62,193 randomly selected individuals who had purchased a hunting license (deer, antlerless, mentored youth, or combination deer hunting licenses). Hunters receiving the mail questionnaire were asked the same questions as asked via the internet. Hunters were instructed not to report hunting effort and harvest associated with DMA permits because landowners obtaining these permits already were required to report the number of deer harvested to the DNR.

Estimates were based on information collected from random samples of hunting license buyers. Thus, these estimates were subject to sampling errors (Cochran 1977). Estimates were calculated using a stratified random sampling design (Cochran 1977) and were presented along with their 95% confidence limit (CL). This CL can be added and subtracted from the estimate to calculate the 95% confidence interval. The confidence interval is a measure of the precision associated with the estimate and implies the true value would be within this interval 95 times out of 100. Unfortunately, there are several other possible sources of error in surveys that are probably more serious than theoretical calculations of sampling error. They include the failure of participants to provide answers (nonresponse bias), question-wording, and question order. It is very difficult to measure these biases.

License buyers were assigned to one of four groups (strata) based on the type of license purchased and for the seasons that these licenses could be used. The first stratum consisted of people eligible only for the archery, regular firearm, and muzzleloader hunting seasons (N = 406,246). The second stratum consisted of people eligible to hunt during archery, regular firearm, muzzleloader, early antlerless, and late antlerless seasons (N = 165,916). The third stratum consisted of people eligible to hunt during archery, regular firearm, muzzleloader, late antlerless, and Liberty seasons (N = 34,714). The fourth stratum consisted of 9,072 people that were eligible to participate in the special disabled hunts. Beginning in 2013, veterans with disabilities could obtain a free deer hunting license (i.e., Disabled Veteran license type). A unique type of hunting license was not available for non-veteran hunters with disabilities; however, hunters with disabilities younger than 65 years were sold a discounted hunting license (i.e., sold a senior hunting license). The random sample consisted of 30,589 people from the first stratum; 12,122 from the second stratum; 10,618 from the third stratum; and 8,864 from the fourth stratum. The stratified sampling design accounted for the

varying probabilities of being selected from the strata so estimates could be reliably extrapolated from the sample to all license buyers.

Estimates were calculated separately by the area where the hunt occurred. For consistency with previous surveys, the state was divided into eight areas that closely matched the DNR's previous wildlife management administrative units (Figure 1). The state was also divided into three ecological regions (UP, Northern LP, and Southern LP). These regions generally matched major ecoregions (Albert 1995), except in the UP where two ecoregions were combined. Ecoregions are regions having similar soils, vegetation, climate, geology, and physiography. Estimates were also calculated for each DMU (Figure 2, Appendix C). Deer harvested from unknown locations were allocated among areas in proportion to the known harvest.

Statistical tests are used routinely to determine the likelihood that the differences among estimates are larger than expected by chance alone. The overlap of 95% confidence intervals was used to determine whether estimates differed significantly. Non-overlapping 95% confidence intervals were equivalent to stating that the difference between the means was larger than would be expected 95 out of 100 times if the study had been repeated (Payton et al. 2003).

Questionnaires were initially mailed in late December 2020, and two follow-up questionnaires were mailed to nonrespondents. To increase the number of questionnaires returned, respondents that returned their questionnaire promptly became eligible to win a firearm or bow. Although 62,193 people were selected to receive a questionnaire, 1,610 surveys were undeliverable resulting in an adjusted sample size of 60,583. Questionnaires were returned by 26,403 people (44% adjusted response rate).

Estimates of harvest, hunting effort, and hunter participation are affected by the willingness of people to complete and return their questionnaires. This problem can confound comparisons of estimates made between years if response rates vary greatly. The percentage of people returning their questionnaire this year was higher than last year. To reduce bias caused by this higher response rate, an adjustment was made on the 2020 estimates to make them comparable to the adjusted 2019 estimates (adjusted to a 74% response rate). Estimates of harvest, hunting effort, and hunter numbers were reduced by 8.3%, 6.2%, and 2.6%, respectively, to make estimates comparable to 2019. These reductions reflected the average decline noted between estimates calculated when 44% and 74% of the responses were used in 2000 and 2001 surveys.

## **RESULTS AND DISCUSSION**

In 2020, 615,948 people purchased a license to hunt deer in Michigan. The number of people buying a license in 2020 increased by about 2% from 2019 (601,984 people purchased a license in 2019). Most of the people buying a license in 2020 were male (89%), and the average age of license buyers was 44 years (Figure 3). About 11% (66,009) of the license buyers were younger than 18 years old. About 3% (21,137) of the license buyers were younger than 12 years old.

In 2020, 935,541 hunting licenses and permits were issued (Table 3), which was an increase of nearly 2% from 2019 (917,826 licenses and permits issued in 2019). Although the overall number of licenses sold increased, the number of deer licenses and antlerless deer licenses sold declined 24% and 5%, respectively. In contrast, the number of combination licenses sold increased by 23%.

Beginning in 2020, hunters buying a combination license could use the two harvest tags to take antlerless deer in the entire Lower Peninsula during the firearm and muzzleloader seasons. Consequently, hunters purchased fewer antlerless and deer hunting licenses, while they increased purchases of combination licenses. It appears that many hunters perceived that the combination license had gained in value because it could be used to take either sex of deer. Allowing hunters to take antlerless deer with the two harvest tags sold with the combination license greatly increased the overall number of harvest tags that could be used to take antlerless deer in 2020 (Table 3).

The number of people buying a license in 2020 was about 12% less than the number of people who purchased a license ten years ago in 2010 (697,527 people purchased a license in 2008). There were fewer license buyers for all age classes between 12 and 55 years of age in 2020, compared to 2010 (Figure 4). However, there were increased hunter numbers among the youngest and oldest age classes in 2020. The increased hunter numbers in the oldest age classes likely represented the rising share of older people in the population as the baby-boom generation aged. Also, the legalization of crossbow use during the archery season probably increased participation among hunters in the oldest age classes. The increased participation among the youngest hunters likely reflected the lowering of the minimum age requirements. In 2012, the minimum age requirement was eliminated to hunt deer with a firearm, while hunters had to be at least 10 years old to participate in 2010.

The number of 2020 deer harvest tags sold for all license types combined increased by nearly 8% from 2019 (Table 3). License buyers purchased an average of 2.2 harvest tags. About 91% of the license buyers obtained three or fewer harvest tags, and about 99% had six or fewer harvest tags (Figure 5). Hunters most frequently obtained antlerless and combination harvest tags (Figure 6). About 34% of the license buyers purchased at least one antlerless license (212,502 people), and greater than 98% of antlerless license buyers purchased three or fewer antlerless licenses, public and private licenses combined (Figure 7).

The antlerless license quota on private lands increased from 322,600 to 353,200 between 2019 and 2020 (9% increase) (Appendix B). The quota for public land antlerless licenses increased from 75,080 to 84,790 between 2019 and 2020 (13% increase). Overall, the antlerless license quota for private and public lands combined increased by about 10% from last year, but the total number of antlerless licenses sold decreased by 5% in 2020 (Table 3).

About  $91.7 \pm 0.3\%$  (565,132 hunters) of the people buying a license in 2020 spent time hunting deer (Table 4). Statewide, the number of people hunting deer during all seasons combined increased significantly by nearly 5% from 2019. Most hunters (488,422) pursued deer during the regular firearm season (Figure 8).

Significantly more people hunted during all seasons except the urban archery season (Table 4). This increase may have been partly explained by Coronavirus disease (COVID-19) restrictions that were enacted in 2020 to limit the spread of COVID-19 (e.g., stay at home requirements, travel restrictions, and keeping physical distance). These restrictions allowed people to have more time to hunt. Additional details about the effects of COVID-19 are presented later in the Discussion.

Participation increased in the early antlerless (92%), late antlerless (74%), Independence (58%), muzzleloader (22%), Liberty (16%), archery (10%), and regular firearm (3%) seasons (Figure 9). The increased participation in the early and late antlerless firearm seasons partly reflected an increase in the area open for hunting. Also, increased participation in the late antlerless firearm seasons reflected an increase in the season length.

About 49% of the days that hunters spent pursuing deer throughout the state occurred in the archery season (Figure 10). About 37% of the hunting effort occurred during the regular firearm season. Nearly 13% of the hunting effort occurred in the muzzleloader and late antlerless seasons combined. Statewide, hunters devoted an average of 15.6 days afield hunting deer during all seasons combined (Table 5). Archers had the greatest number of days available to hunt deer (77 days) and devoted the greatest number of days afield ( $\bar{x}$  = 13.5 days/hunter) (Figure 11, Table 5). Statewide, the total number of days hunting deer during all seasons combined increased significantly by about 14% from 2019 (Table 4). Significantly more days were devoted to hunting during the late antlerless (131%), early antlerless (79%), archery (15%), muzzleloader (10%), and regular firearm (7%) seasons during 2020 (Table 4). Hunting effort was not significantly different in the Independence, Liberty, and urban archery seasons.

About 420,071 deer were harvested statewide in 2020, which was an increase of about 13% from 2019 (Figures 12-13, Tables 6-7). The number of deer harvested increased significantly in the early antlerless (206%), late antlerless (100%), archery (19%), and Liberty (17%) seasons. Harvest was not significantly changed in the remaining seasons (i.e., Independence, muzzleloader, regular firearm, and urban archery seasons). Statewide harvests of antlerless deer for all the seasons combined in 2020 increased significantly by 26% from 2019, while harvest of antlered deer was not significantly different (Table 6). The counties with the greatest harvest densities for antlered and antlerless deer were generally in the central and south-central parts of the state (Figure 14).

The increase in harvest may have reflected by COVID-19 restrictions that allowed additional people to hunt in 2020. The increased harvest of antlerless deer likely also reflected that hunters with a combination license could take antlerless deer in the entire Lower Peninsula during the firearm and muzzleloader seasons beginning in 2020. Also, the early and the late antlerless seasons were open in more areas in 2020.

Also, the muzzleloader season was shortened, and the late antlerless seasons was expanded in Zone 3 from 2019.

Also, the 2020 early and late antlerless seasons were expanded from 2019.

About 48% of the deer harvested (sexes combined) in 2020 were taken during the regular firearm season (Figure 15). Nearly 42% of the antlerless deer and 54% of the antlered bucks were harvested in the regular firearm season. Hunters took 33% of the harvested deer (sexes combined) during the archery season. These archers took 27% of the antlerless deer and 39% of the antlered bucks harvested. Few antlered bucks (4%) were taken in the muzzleloader season. The early and late antlerless and muzzleloader seasons combined accounted for about 21% of the antlerless deer harvested.

About 89% of the deer harvested (sexes combined) in 2020 were taken on private lands (Table 8). Statewide, most of the antlerless deer (88%) and antlered bucks (89%) were harvested on private lands.

Statewide, 51% of deer hunters harvested at least one deer (all deer seasons and sexes combined) in 2020 (Figure 16, Table 9), compared to the 50% success in 2019. About 26% of hunters took an antlerless deer, and 35% took an antlered buck in 2019. About 18% of deer hunters harvested two or more deer (sexes combined).

Hunters were most successful in taking a deer during the regular firearm (36%), Liberty (35%), and archery (35%) seasons (Figure 17, Table 10). Hunter success was lowest in the muzzleloader (15%) and urban archery (11%) seasons. Nearly 25% of hunters took an antlered buck and 14% harvested an antlerless deer during the regular firearm season (Table 10).

Deer hunters were asked to report how satisfied they were with (1) number of deer seen, (2) number of antlered deer [bucks] seen, (3) size of antlers seen, (4) number of deer taken, and (5) their overall hunting experience. Statewide,  $\leq 51\%$  of hunters were satisfied with the numbers of deer seen, bucks seen, size of antlers seen, deer taken, and their overall hunting experience in 2020 (Tables 11-13). Statewide levels of satisfaction decreased significantly between 2019 and 2020 for the number of deer seen, the number of bucks seen, the size of antlers seen, and the overall deer hunting experience. In contrast, satisfaction with the number of deer harvested did not change significantly between 2019 and 2020. People hunting deer only on private lands were generally more satisfied than people hunting exclusively on public lands (Tables 14-16).

Most archers (72%) used a crossbow during the archery season (230,720 hunters), and about 35% of these archers took at least one deer with a crossbow (Tables 17-18). They harvested about 93,034 deer with the crossbow (Table 19). The number of archers using a crossbow in 2020 increased significantly by 13% from 2019 (204,160 archers in 2019). Harvest of deer by archers using a crossbow increased significantly by 20% from last year (77,375 deer taken in 2019). About 35% of these archers using a crossbow in 2020 harvested a deer with a crossbow in the archery season, versus 33% success in 2019.

An estimated  $144,543 \pm 3,409$  hunters took  $179,587 \pm 4,904$  deer to a commercial meat processor in 2020. Thus, about 44% of the deer harvested in all seasons (179,587 of

410,639 deer) were handled by a commercial processor. This proportion is nearly the same as reported in 2019 (Frawley 2020).

About 47% of the deer hunters statewide used a trail camera to monitor deer activity in their hunt area (Table 20), and hunters in the UP more frequently used trail cameras than hunters in the LP. Although UP hunters more frequently used trail cameras, the mean number of days that they used cameras was less than LP hunters (Table 21). These differences probably reflected geographic differences in hunting success (Table 10) and the mean number of days of hunting effort (Table 5). Hunters in the UP had lower hunting success than LP hunters; thus, UP hunters were more likely to use trail cameras to improve their hunting success. Although a lower proportion of hunters in the LP used cameras, the hunters in the LP that used trail cameras had more opportunities to use cameras than hunters in the UP because they had more hunting seasons and longer seasons (Table 1).

Among the hunters using a trail camera, 96% captured an image of a deer (Table 22). Hunters in the UP were more likely to see bears, fishers, martens, and wolves than hunters in the LP. In contrast, hunters in the LP were more likely to see coyotes and foxes than hunters in the UP. Furthermore, bobcats were more frequently seen by hunters in the NLP than either the UP or SLP. A significantly greater proportion of hunters statewide in 2020 captured a photograph of a bobcat (18.6% in 2020 versus 15.9% in 2019), fisher (3.1% versus 2.4%), fox (32.4% versus 28.5%), and wolf (6.9% versus 5.5%) than in 2019 (Figure 18).

Currently, deer hunters that want to take a buck in Michigan can purchase either a single deer license that has 1 buck kill tag or purchase a combination license that has 2 buck kill tags. In the Lower Peninsula, these tags can also be used to take antlerless deer. The DNR considered changing the types of deer that can be taken with the combination license. The new combination license would still have two tags; however, one tag could be used to take only a buck statewide and one tag could be used only to take a doe statewide. Hunters would no longer be allowed to take two bucks with the new combination license. About 48% of hunters supported changing the types of deer that could be taken with the combination license so that only one buck and one doe could be harvested statewide (Table 23). In contrast, 40% of hunters opposed this change. If all combination licenses were changed to one buck tag and one doe tag, the DNR would also consider eliminating the deer license that only has a single buck tag. About 26% of hunters supported eliminating the single deer license, while 61% of hunters opposed this change (Table 23).

If the types of deer that could be taken with a combination license were changed, the DNR would also consider whether antler point restrictions (APRs) would be imposed on the buck tag. The APRs would be designed to protect over 50% of yearling bucks to promote their growth to older age classes. This APRs would vary across the state. A legal buck would have 2 or more points on one side in the Upper Peninsula, 3 or more points on one side Northern Lower Peninsula, and 4 or more points on one side in the Southern Lower Peninsula. About 51% of hunters supported regional APRs on the buck tag, while 35% of hunters opposed these regional APRs (Table 23). In comparison, most Michigan deer hunters (59%) in 2016 supported regional antler-point restrictions on the existing combination license (Frawley 2017).

Currently, an unused deer harvest tag cannot be transferred to another person. The DNR would consider allowing the transfer of an unused buck tag to another hunter so that they could use it to harvest a buck. About 29% of hunters supported allowing hunters to transfer an unused buck tag, while 56% of hunters opposed transferring an unused buck tag (Table 23).

Hunters were asked to indicate whether COVID-19 caused them to (1) buy a deer hunting license, (2) spend more time hunting, (3) reduce the distance they traveled to hunt, (4) hunt alone more often, (5) struggle to locate a hunting area, or (6) struggle to locate a processor to butcher their deer (Table 24). Many people may have had more time to hunt in 2020 because some businesses and schools shut down and people often worked from home because of COVID-19 restrictions. About 9% of hunters indicated that they were more likely to purchase a license in 2020 (Table 24), and about 19% of hunters indicated that they increased the amount of time they hunted in 2020 because of COVID-19. Michigan residents were encouraged to do fewer long-distance trips in 2020 because of COVID-19, and about 8% of hunters indicated that they reduced the distance they traveled to hunt in 2020. People also were encouraged to keep physical distance between themselves and other people in 2020 because of COVID-19, and about 14% of hunters indicated that they hunted alone more frequently in 2020. About 5% of hunters indicated that they found it more difficult to locate a hunting area in 2020, and about 8% of hunters indicated that they found it more difficult to locate a processor to butcher their deer in 2020 because of COVID-19.

Beginning in March 2020, COVID-19 regulations forced many people to work remotely. Among Americans that could work remotely, 71% of these people were working from home all or most of the time (Pew Research Center 2020). Among workers that shifted to remote working, 49% say they had more flexibility to choose when they worked. This flexibility may have allowed more people to pursue recreational activities such as deer hunting.

## **ACKNOWLEDGMENTS**

I thank all the deer hunters that provided information. Theresa Riebow completed the data entry. The figure of DMUs was prepared by Marshall Strong. Mike Donovan and Chad Stewart reviewed a draft version of this report.

Table 1. Deer hunting seasons in Michigan, 2020-2021.

Season	Bag limit	Area	Dates
Liberty/Youth Hunt	1	Statewide	September 12-13
Early Antlerless Firearm	1 per kill tag	Lower Peninsula <sup>a</sup>	September 19-20
Independence Hunt	1	Statewide	October 15-18
Archery	1 per kill tag	Statewide	October 1 – November 14 and December 1 – January 1
Regular Firearm	1 per kill tag	Statewide	November 15-30
Muzzleloader	1 per kill tag	Statewide	December 4-13
Late Antlerless Firearm	1 per kill tag	Lower Peninsula <sup>a</sup>	December 14-January 1
Late Urban Archery	1 per kill tag	Macomb, Oakland, and Wayne counties	January 2-31

<sup>a</sup>The area open to hunting during the early and late antlerless firearm seasons included the entire LP, except for the island DMUs 145, 245, 115, and 149.

Table 2. The types of deer that could be taken during the 2020 Michigan deer hunting seasons for each combination of season and hunting license.

Type of license (harvest tag) or permit	Season	Area	Type of deer that could be harvested <sup>a</sup> and area
Deer license or deer combination regular license	Archery seasons	Upper Peninsula (Zone 1)	Antlered deer (deer with at least 1 antler with 3 or more antler points each 1 or more inches) and antlerless deer. Antlerless deer could not be taken in DMUs 127, 066, 027, 131, 042, 036, and 031. Antler point restrictions did not apply in the core CWD surveillance area. <sup>b</sup>
Deer license or deer combination regular license	Archery seasons	Lower Peninsula (zones 2 and 3)	Antlerless or antlered deer <sup>c</sup>
Deer license or deer combination regular license	Firearm or Muzzleloader seasons	Upper Peninsula (Zone 1)	Antlered deer. Antler point restrictions did not apply in the core CWD surveillance area. <sup>b</sup>
Deer license or deer combination regular license	Firearm or Muzzleloader seasons	Lower Peninsula (zones 2 and 3)	Antlerless or antlered deer <sup>c</sup>
Deer license or deer combination regular license	Liberty and Independence seasons	statewide	Antlerless or antlered deer
Combination License <sup>d</sup> (Restricted harvest tag)	Archery seasons	Upper Peninsula (Zone 1)	An antlerless deer or a deer that has at least 1 antler with 4 or more antler points, 1 or more inches in length. Antlerless deer could not be taken in DMUs 127, 066, 027, 131, 042, 036, and 031. Antler point restrictions did not apply in the core CWD surveillance area. <sup>b</sup>
Combination License <sup>d</sup> (Restricted harvest tag)	Archery seasons	Lower Peninsula (zones 2 and 3)	An antlerless deer or a deer that has at least 1 antler with 4 or more antler points, 1 or more inches in length. Antler point restrictions did not apply in the CWD management zone. <sup>e</sup>

<sup>a</sup>Antlered deer had antlers at least 3 inches in length; antlerless deer included deer without antlers and deer with antlers less than 3 inches in length. Hunters could harvest a maximum of 2 antlered deer per year (all seasons combined).

<sup>b</sup>Core CWD area included Ionia, Kent, Mecosta, Montcalm, and Newaygo counties in the LP and portions of Delta, Dickinson, and Menominee counties in the UP.

<sup>c</sup>If a person took 2 antlered deer during all seasons combined (except youth and apprentice hunters), one of the antlered deer must have had at least 1 antler with 4 or more antler points, each point being 1 or more inches in length.

<sup>d</sup>Combination licenses included two harvest tags (i.e., regular and restricted harvest tags).

<sup>e</sup>CWD management zone included Barry, Calhoun, Clinton, Eaton, Gratiot, Hillsdale, Ingham, Ionia, Isabella, Jackson, Kent, Lenawee, Mecosta, Midland, Montcalm, Muskegon, Newaygo, Ottawa, and Shiawassee counties.

<sup>f</sup>Hunters could harvest only 1 deer in the Liberty and Independence seasons.

<sup>g</sup>Permits for special hunts on designated public lands (e.g., some state parks, game areas, and federal property). These permits valid only during specific dates, which varied among areas. Permits issued to applicants using a lottery (i.e., random selection). To use these permits, the hunter must also have purchased a valid deer hunting license.

Table 2 (continued). The types of deer that could be taken during the 2020 Michigan deer hunting seasons for each combination of season and hunting license.

Type of license (harvest tag) or permit	Season	Area	Type of deer that could be harvested <sup>a</sup>
Combination License <sup>d</sup> (Restricted harvest tag)	Firearm or Muzzleloader seasons	Upper Peninsula (Zone 1)	A deer that has at least 1 antler with 4 or more antler points (1 or more inches in length); Antler point restrictions do not apply in the core CWD surveillance area. <sup>b</sup>
Combination License <sup>d</sup> (Restricted harvest tag)	Firearm or Muzzleloader seasons	Lower Peninsula (zones 2 and 3)	An antlerless deer or a deer that has at least 1 antler with 4 or more antler points 1 or more inches in length. Antler point restrictions do not apply in the CWD management zone. <sup>e</sup>
Combination License <sup>d</sup> (Restricted harvest tag)	Liberty and Independence seasons <sup>c</sup>	Statewide	Antlerless or antlered deer statewide
Mentored youth deer license	Archery, Regular Firearm, Muzzleloader, or Liberty seasons <sup>c</sup>	Statewide	Antlerless or antlered deer statewide. Antler point restrictions do not apply.
Mentored Youth	Antlerless seasons	Statewide	Antlerless deer only
Antlerless License <sup>e</sup>	All seasons	Statewide	Antlerless deer only
Deer Management Assistance (DMA) permit <sup>f</sup>	All seasons	Statewide	Antlerless deer only
Managed Deer Hunt permit <sup>g</sup>	Specified season	Statewide	Antlerless deer only

<sup>a</sup>Antlered deer had antlers at least 3 inches in length; antlerless deer included deer without antlers and deer with antlers less than 3 inches in length. Hunters could harvest a maximum of 2 antlered deer per year (all seasons combined).

<sup>b</sup>Core CWD area included Ionia, Kent, Mecosta, Montcalm, and Newaygo counties in the LP and portions of Delta, Dickinson, and Menominee counties in the UP.

<sup>c</sup>If a person took 2 antlered deer during all seasons combined (except youth and apprentice hunters), one of the antlered deer must have had at least 1 antler with 4 or more antler points, each point being 1 or more inches in length.

<sup>d</sup>Combination licenses included two harvest tags (i.e., regular and restricted harvest tags).

<sup>e</sup>CWD management zone included Barry, Calhoun, Clinton, Eaton, Gratiot, Hillsdale, Ingham, Ionia, Isabella, Jackson, Kent, Lenawee, Mecosta, Midland, Montcalm, Muskegon, Newaygo, Ottawa, and Shiawassee counties.

<sup>f</sup>Hunters could harvest only 1 deer in the Liberty and Independence seasons.

<sup>g</sup>Permits for special hunts on designated public lands (e.g., some state parks, game areas, and federal property). These permits valid only during specific dates, which varied among areas. Permits issued to applicants using a lottery (i.e., random selection). To use these permits, the hunter must also have purchased a valid deer hunting license.

Table 3. The number of Michigan deer licenses purchased and harvest tags issued, 2018-2020.

Appendix A. The questionnaire that was used to collect answers for the 2020 Michigan deer harvest survey.

Michigan Department of Natural Resources – Wildlife Division  
 PO Box 30030 Lansing MI 48909-7530

# 2020 MICHIGAN DEER HARVEST STUDY

This information is requested under the authority of Part 435, 1994 PA 451, M.C.L. 324.43539.

**It is important that you return this questionnaire even if you did not hunt or harvest a deer. Please report only your hunting activities, and only report taking a deer if your kill tag was attached to it.**

**1. Did you hunt deer in Michigan during the 2020 seasons?**

1  Yes.    2  No. Skip to Question #12.

Appendix A (continued). The questionnaire that was used to collect answers for the 2020 Michigan deer harvest survey.

2. In the following table, please report only your hunting activities and the deer tagged with your deer license. Report harvest and days hunted in different counties on separate rows. For each deer harvested, indicate the type of deer tagged (antlered buck or antlerless), and whether it was taken on public or private land. Antlered bucks have antlers at least 3 inches in length; antlerless deer include deer without antlers and deer with antlers less than 3 inches in length. Do not report hunting effort and harvest taken with Deer Management Assistance Permits.

SEASON HUNTED (Check box if you hunted during the season.)	LOCATION HUNTED (For each season hunted, list the management unit and county hunted on separate lines. See map on first page.)		NUMBER OF DAYS HUNTED	NUMBER OF DEER HARVESTED (Record by type of deer and land ownership type where each deer was taken.)			
	Deer Management Unit	County		Antlered Bucks		Antlerless	
				Public Land	Private Land	Public Land	Private Land
<input checked="" type="checkbox"/> <b>Example</b>	1 041	Kent	12	0	1	0	0
<input type="checkbox"/> <b>Archery</b> Oct 1-Nov 14 and Dec 1-Jan 1 (Statewide)	1						
	2						
	3						
<input type="checkbox"/> <b>Regular Firearm</b> Nov 15-30 (Statewide)	1						
	2						
	3						
<input type="checkbox"/> <b>Muzzleloader</b> Dec 4-13 (Statewide)	1						
	2						
	3						
<input type="checkbox"/> <b>Early Firearm</b> Sept 19-20 (Lower Peninsula)	1			Only antlerless deer could be taken on private land during the early firearm season			
	2						
	3						
<input type="checkbox"/> <b>Late Firearm</b> Dec 14-Jan 1 (Lower Peninsula)	1				No bucks allowed on private land		
	2						
	3						
<input type="checkbox"/> <b>Liberty/Youth Hunt</b> Sept 12-13 (Statewide)	1						
	2						
	3						
<input type="checkbox"/> <b>Independence Hunt</b> Oct 15-18 (Statewide)	1						
	2						
	3						
<input type="checkbox"/> <b>Late Urban Archery Hunt</b> Jan 2-31 (Macomb, Oakland, & Wayne counties only)	1						
	2						
	3						

Appendix A (continued). The questionnaire that was used to collect answers for the 2020 Michigan deer harvest survey.

3. Did you use a crossbow to hunt deer during the archery season (Oct. 1- Nov. 14 and Dec. 1 - Jan. 1)?

<sup>1</sup>  Yes      <sup>2</sup>  No. Skip to Question #5.

4. If you used a crossbow to hunt deer during the archery season, how many deer did you take using the crossbow in 2020?

\_\_\_\_\_ Report the number of antlerless deer you took with a crossbow.

\_\_\_\_\_ Report the number of antlered deer (bucks) you took with a crossbow.

5. If you harvested a deer in 2020, how many of your deer were taken to a commercial meat processor for processing?

\_\_\_\_\_ Report the number of deer taken to a commercial meat processor.

6. What is your preferred county to hunt deer in Michigan? Please select one county from the counties you reported hunting during the 2020 seasons in Question #2.

Please write county name

7. On what type of land did you hunt deer in your preferred county in 2020?

<sup>1</sup>  Public      <sup>2</sup>  Private      <sup>3</sup>  Both private and public lands

8. Please indicate how satisfied or dissatisfied you were with the following for the 2020 deer hunting seasons in your preferred county:  
(Select one choice per item.)

	Very Satisfied	Somewhat Satisfied	Neutral	Somewhat Dissatisfied	Very Dissatisfied	Not Applicable
a. Number of deer you saw.	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	6 <input type="checkbox"/>
b. Number of antlered deer (bucks) you saw.	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	6 <input type="checkbox"/>
c. The size of the antlers on the bucks you saw.	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	6 <input type="checkbox"/>
d. Your overall deer hunting experience.	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	6 <input type="checkbox"/>
e. Number of deer you harvested.	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	6 <input type="checkbox"/>

9. Did you use a trail camera to monitor deer activity in the county where you preferred to deer hunt in 2020?

<sup>1</sup>  Yes      <sup>2</sup>  No (If no, please skip to question 12.)

10. If you used a trail camera in 2020, how many cameras did you use and how many days did you use a camera to monitor deer activity in your preferred county?

\_\_\_\_\_ Report the number of trail cameras you used in your preferred county.

\_\_\_\_\_ Report the average number of days you used each trail camera in your preferred county.

11. If you used a trail camera, which of the following animals did you photograph in the county where you preferred to deer hunt in 2020? (Select all that apply.)

- <sup>0</sup>  None      <sup>1</sup>  Bear      <sup>2</sup>  Bobcat      <sup>3</sup>  Coyote      <sup>4</sup>  Deer  
<sup>5</sup>  Fisher      <sup>6</sup>  Fox      <sup>7</sup>  Marten      <sup>8</sup>  Wild pig      <sup>9</sup>  Wolf

Appendix A (continued). The questionnaire that was used to collect answers for the 2020 Michigan deer harvest survey.

**12. Currently, hunters that want to take a buck can purchase either a single deer license (\$20) that has 1 buck kill tag or purchase a combination license (\$40) that has 2 buck kill tags. In the Lower Peninsula, these tags can also be used for antlerless deer. The DNR is considering changing the types of deer that can be taken with the combination license. The new combination license would still have two tags and still cost \$40; however, one tag could be used to take only a buck statewide and one tag could be used only to take a doe statewide. Hunters would no longer be allowed to take two bucks with the new combination license. How much would you support or oppose changing the types of deer that could be taken with the new combination license?**

1  Strongly support    2  Support    3  Neither    4  Oppose    5  Strongly oppose    6  Unsure

**13. If all combination licenses are changed to one buck tag and one doe tag, the DNR would also consider eliminating the single deer license that only has a single buck tag. Thus, a buck could only be taken with the new combination license. How much would you support or oppose eliminating the single deer license and only purchasing a combination license or antlerless license to deer hunt in Michigan?**

1  Strongly support    2  Support    3  Neither    4  Oppose    5  Strongly oppose    6  Unsure

**14. If all combination licenses are changed to one buck tag and one doe tag, the DNR would still need to consider whether minimum antler point restrictions (APRs) would apply for taking a buck. These APRs would protect over 50% of yearling bucks to promote their growth to older age classes. These APRs would vary across the state. A legal buck would have 2 or more points on one side in the Upper Peninsula, 3 or more points on one side Northern Lower Peninsula, and 4 or more points on one side in the Southern Lower Peninsula. How much would you support these regional APRs being applied to the buck tag from the new combination license.**

1  Strongly support    2  Support    3  Neither    4  Oppose    5  Strongly oppose    6  Unsure

**15. How much do you support or oppose allowing hunters to transfer an unused buck tag to another hunter so that they could use it to harvest a buck? This change may increase the overall number of bucks harvested.**

1  Strongly support    2  Support    3  Neither    4  Oppose    5  Strongly oppose    6  Unsure

**16. To what extent do you agree or disagree with each of the following statements regarding the impacts of the COVID-19 pandemic on your deer hunting activity during 2020? (Select one choice per item.)**

	Strongly Agree	Agree	Neither	Disagree	Strongly Disagree	Unsure
a. I was <u>more likely</u> to buy a hunting license because of the COVID-19 pandemic.	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	6 <input type="checkbox"/>
b. I <u>increased</u> the amount of time that I spent hunting deer because of the COVID-19 pandemic.	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	6 <input type="checkbox"/>
c. I <u>reduced</u> the distance I travelled to hunt deer because of the COVID-19 pandemic.	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	6 <input type="checkbox"/>
d. I hunted <u>alone more frequently</u> because of the COVID-19 pandemic.	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	6 <input type="checkbox"/>
e. I found it <u>more difficult</u> to locate a hunting area because of the COVID-19 pandemic.	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	6 <input type="checkbox"/>
f. I found it <u>more difficult</u> to locate a meat processor to butcher my deer because of the COVID-19 pandemic.	1 <input type="checkbox"/>	2 <input type="checkbox"/>	3 <input type="checkbox"/>	4 <input type="checkbox"/>	5 <input type="checkbox"/>	6 <input type="checkbox"/>

*Please return questionnaire in the enclosed postage-paid envelope. Thanks for your help!*

Appendix B. Antlerless deer hunting license quotas, number of antlerless licenses sold, and number of hunters purchasing an antlerless license in Michigan during 2020, summarized by Deer Management Unit and license type (public and private lands).

<sup>a</sup>Harvest estimates do not include deer taken with DMA permits. An additional 9,557 deer were taken with these permits.

<sup>b</sup>Column totals for hunting effort and harvest may not equal regional and statewide totals because of rounding errors.

<sup>c</sup>The number of hunters does not add up to the statewide total because hunters can hunt in more than one DMU.

<sup>d</sup>See Figure 2 for the locations of DMUs.

<sup>e</sup>95 confidence limit.

Appendix C (continued). The estimated number of deer hunters, hunting effort, and deer harvested in Michigan during 2020, summarized by Deer Management Unit.
