

Innovator Fòssięł Inc. Brings 20+ Million-Year-Old Materials to Boston's Interior Design Industry.

Prehistoric is new again thanks to Boston-based Fòssięł Inc. The company aims to revolutionize New England's interior design industry by introducing something rarely seen available – Approximately 22,000,000-year-old fossilized furniture and building materials. Fòssięł's gallery will officially be opening on May 17, 2021 in the nose of Park Plaza Hotel Building Aka The Saunders Building.

Boston, Massachusetts – May 17, 2021 – Discerning homeowners, designers, and architects searching for the perfect unique statements for their homes, commercial properties or hospitality venues now have access to a material extraordinarily rare and never before available at commercial scale thanks to Fòssięł Inc. The company and its affiliates transform ancient, petrified wood into incredible home décor options and opportunity.

“I’m happy to finally be able commercialize my passion and bring this stunning, semi-precious material application to market at broad scale for the first time,” explained Jamie O’Brien, the creative force behind the company. “Fòssięł will be offering products from countries in Southeast Asia, including Indonesia, Thailand, and Burma, as well as other nations, such as Madagascar and Brazil and even from right here from the western United States. My material will be aged between 20,000,000 and 280,000,000 years old.”

Petrified wood was once organic material – ancient, living trees. Over time, minerals slowly replaced the woody tissue in a process known as permineralization, perfectly preserving this once organic material into fossilized stone. Incredibly beautiful, no two pieces are identical, and O’Brien manages to bring out the material’s unique colors and rich textures through special production processes. The result? Incomparable and hyper-unique additions for the home. From one-of-a-kind countertops, sink basins to patio pavers older than the human species and dating back through the times of the dinosaurs.

Fòssięł offers home décor, furnishings, and even landscaping items crafted from petrified wood from the Miocene Epoch, Cenozoic - Mesozoic Eras, and Jurassic - Triassic Periods, transforming raw materials into dramatic home décor and accent pieces, stunning furnishings, and more. For customers with a more DIY attitude, Fòssięł sells slices, slabs, and planks, allowing the creation of customized furnishings.

“In my personal life pursuits for knowledge, cultural immersion and adventure and as a global entrepreneur in the physical commodity trading and bulk logistics space, I have traveled to every continent and visited more than 50 countries. No matter where I am, I keep an eye out for unique niche products and materials to place into the space between spaces,” O’Brien continued. “When

I was first introduced to petrified wood while abroad in Bali, I immediately saw its incredible possibilities and a wider application. Since then, I have built a robust, multi-country supply chain of raw and finished materials which will truly be changing the game.”
