### Client Form For Engine Harness Requirements.

For a standalone engine harness we will need the main engine harness and ECU to test your system once wired

Usually all we require is the main engine harness and engine ECU to perform the wiring modifications to create an OEM standalone system. If you would like for us to change connectors on the sub harness to the starter and knock sensors or service, the front harness on the 1UZ non vvt you can send that as well. Connectors come at an additional cost of around \$ 5 a connector installed. Please do not remove the plastic covers on your harness. In the case of manual application, we remove all wires that are not required for the swap.

Shipping address is:
