# Nebula (\$NEBULA) 360° Review

## Market Placed

In 2022, enterprise spending on cloud infrastructure services reached \$225 billion, growing by \$47 billion from the previous year. The surge is fuelled by organizations seeking modern networking, storage, and database solutions.

To our knowledge, there is no competitor to NEBULA.

## Project Overview

NEBULA transforms cloud computing with easy machines, decentralized storage, and AI. It's about simplicity, collaboration, and user empowerment. The user-friendly dApp ensures easy node setup without any complexity.

## Tokenomics and Performance

- ERC20 token on the Ethereum Blockchain
- Total Supply: 100,000,000
- Tax Allocation: (5%): - 1%Team - 1% Marketing - 2% Infrastructure - 1% Treasury
- Ranked No. 9 on CMC trending projects
- Daily trading volume: \$300,000 at time of writing
- Current Market Cap: \$3 million with huge growth potential
- Holder Base:- 1000 holders and steadily increasing

## Road map

- Machines are now LIVE
- Preconfigured Machines for ETH , KAS and TAO
- Introduction of program execution support
- Expansion of pre-built blockchain options based on user voting
- Support for advanced virtual computing projects
- Ongoing improvements and user-driven feature enhancements

## Smart Contract and Security

- Contract Verified and Audited with Perfect DEXT Score of 99%
- Liquidity Locked for 12 months.
- Contract Renounced
- Audit clear, no Red Flags

## NEBULA Features:

- **Preconfigured Machines:** Simplifies crypto mining & node management.
- **Decentralized Storage:** Empowers users with decentralized storage solutions.
- **AI-Powered Machines:** Guides users, fosters simplicity, collaboration in cloud computing.
- **AI Cloud Computing:** Integrates AI for automation, real-time analytics—user-friendly dashboard enhances control and insights.
- **Validator Node Setup:** User-friendly interface simplifies becoming a validator—streamlining setup for accessibility and ease.
