

316 DURABOND™

TYPE 316 STAINLESS STEEL GROUND WIRE CLIP SET ELIMINATES CORROSION

DuraBond™ provides infinite corrosion protection in harsh industrial applications and the most highly-corrosive, salt-laden marine environments

Ground wire clips, commonly made from Zinc-plated metal and attached to crossarms in utility plants, have a history of failures between 6-months and 3 years in harsh environmental conditions—especially when dissimilar metals are used in the wires and clips. Corroding fasteners can result in broken bonds and create unsightly reddish-brown streaks on crossarms, poles and other attachment locations.

Introducing DuraBond ground wire clip sets, manufactured from Type 316 Stainless Steel, exclusively from Power Manufacturing. Type 316 is impervious to corrosion, providing installations that last a lifetime with no broken bonds or ugly rust streaks. Easy to install, 316 DuraScrew fasteners have self-drilling tips, a specially-designed head with 3 installation options.

Type 316 Stainless Steel is often called “Marine Grade”

Type 316 Stainless contains less Chromium, but more nickel than Type 304. Nickel is well-known for its protective properties. Type 316 also contains an alloying element called Molybdenum which enhances strength, hardness, durability, elevated temperature strength and corrosion resistance when added to steel and cast irons.

Advantages

- Virtually infinite life span
- “Marine-grade” material minimizes failures and resulting replacement costs
- Eliminates unsightly rust stains on crossarms and attachment surfaces
- Enhanced material strength prevents screw heads from twisting off during installation
- Self-drilling points and specially-designed heads for fast and convenient installations

Better Torsion Strength so Heads Don’t Twist Off

316 Stainless comes in different grades. We use Type 316H in our DuraScrew fasteners, a harder form of Stainless that withstands torque created during installation.

DuraBond™ clips are available in T316H Stainless Steel or C110 Copper

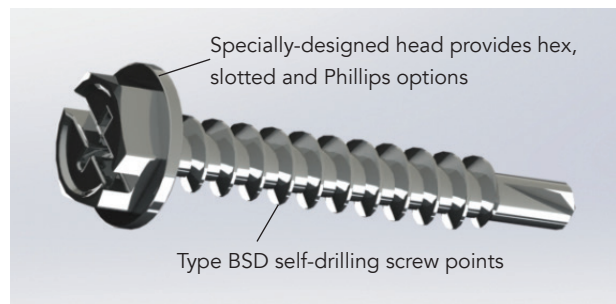

Power Part #	Dimensions	Material	Fastener Size
BC10608AWG-ST	.035" THICK X 1/2" WIDTH	T316 STAINLESS STEEL	#10 BSD SCREW
BC10608AWG-1-ST	.057" THICK X 1/2" WIDTH	T316 STAINLESS STEEL	#10 BSD SCREW
BC10608AWG-CU	.035" THICK X 1/2" WIDTH	C110 COPPER	#10 BSD SCREW
BC10608AWG-1-CU	.057" THICK X 1/2" WIDTH	C110 COPPER	#10 BSD SCREW

Sold as a set...or buy DuraScrew™ fasteners separately for all your corrosion-proof fastening needs

Applications

- Attach bonding clips and other hardware
- Install critical signage
- Attach riser guard and other hardware
- Especially effective for fastening needs in marine, coastal or industrial environments

Fastener Sizes

- Sizes: #4 - #12
- Lengths: 3/4" – 2-1/2"

Manufactured to industry standards in the USA!
