

Learn about your skeleton and good character with X-RAY.

There are **206** bones that make up the human skeleton.

These bones have 3 important jobs:

- They give our body structure
- They provide stability
- They protect our organs

This is an X-ray taken of the human foot.

X-rays use a small amount of radiation, electromagnetic waves that go through your skin, to take a picture of the inside of your body.

Character is how we think, speak, act, and live, when no one is looking. The same way bones hold up our body, **good character** helps to support our life. If we could take a “**CHARACTER X-RAY**” of your heart what would we see?

KINDNESS or **UNKINDNESS**

LOVE or **Hate** **TRUTH** or **LIES**

Responsibility or **Irresponsibility**

FAIRNESS or **UNFAIRNESS**

RESPECTFUL or **DISRESPECTFUL**

Drug Free or **Drug use**
