MODULAR

Reconstruction

Creating a city with 3D Buildings of Cheung Sha Wan

MiC, Changing Cities, and Urban Futures

Buildings used to be static and constant, but what if cities become fluid and dynamic?

With this in mind, we created a rotating city.

Modular Integrated Construction (MiC): construction whereby free-standing modules are manufactured separately and transported for installation in a building (think lego of rooms!)

Narrative

Navigating a Changing City

Our character needs to get to work.

The bus leaves without him and he chases it in vain.

As he runs, he experiences parts of the city out of his daily home-to-work routine.

Why is this city so foreign and overwhelming?
