Details ENERGY & Associates Launches in Tampa Bay, Offering Smarter Energy Solutions for Businesses

Details ENERGY & Associates, a new and dynamic force in the commercial energy consulting space, is proud to announce its official launch in the heart of Tampa Bay. Built on the bold belief that **"Details Ain't Optional™"**, the firm delivers customized energy procurement and strategy services that give businesses a competitive edge in a volatile energy market.

With a portfolio of over 100 vetted energy suppliers and a no-upfront-fee approach, Details ENERGY helps commercial clients reduce costs, optimize energy use, and gain transparency in an often confusing marketplace. Their advisory model is performance-based, meaning clients only pay through embedded supplier rates — no consulting invoices, no surprises.

"Our goal is simple: help businesses stop overpaying for energy by paying attention to the details others ignore," said Clayton Francis, Managing Partner. "We're here to cut through the noise, advocate for our clients, and deliver real, measurable savings."

"The energy market isn't short on supply — it's short on transparency and respect for the end user," added Details Founder. "There's plenty of room in this space for firms that do right by their clients. We're here to prove that you can win in this industry without inflating prices or cutting corners."

The company brings together two decades of experience in deregulated energy markets, delivering services such as:

- Strategic energy procurement
- Rate audits and savings analysis
- Load and demand optimization
- Renewable and efficiency solution alignment

Details ENERGY & Associates is now open to serve businesses across Florida and other deregulated states, with a sharp focus on commercial property owners, industrial facilities, and enterprise-level operations. As well as a critical partnership with EcoFlow, a leading portable power station and solar solutions manufacturer. "Our state has experienced unfortunate challenges from hurricanes. We want to help Florida be ready. EcoFlow continues to push this initiative forward, states Clayton. "We are proud to promote this."
