5 years without clogging  
**21,471 mg**

FLAT™ is an ultimate fusion of art and technology in air purification. FLAT's patented aerodynamic design and versatile filters cater to various needs. It offers:

- Five-year, high dust-holding capacity filter for budget customers, or
- 99.995% ULPA filter for those demanding top air quality, or
- UVC and AUROS™ Photocatalyst, it inhibits coronavirus by over 99.99%.

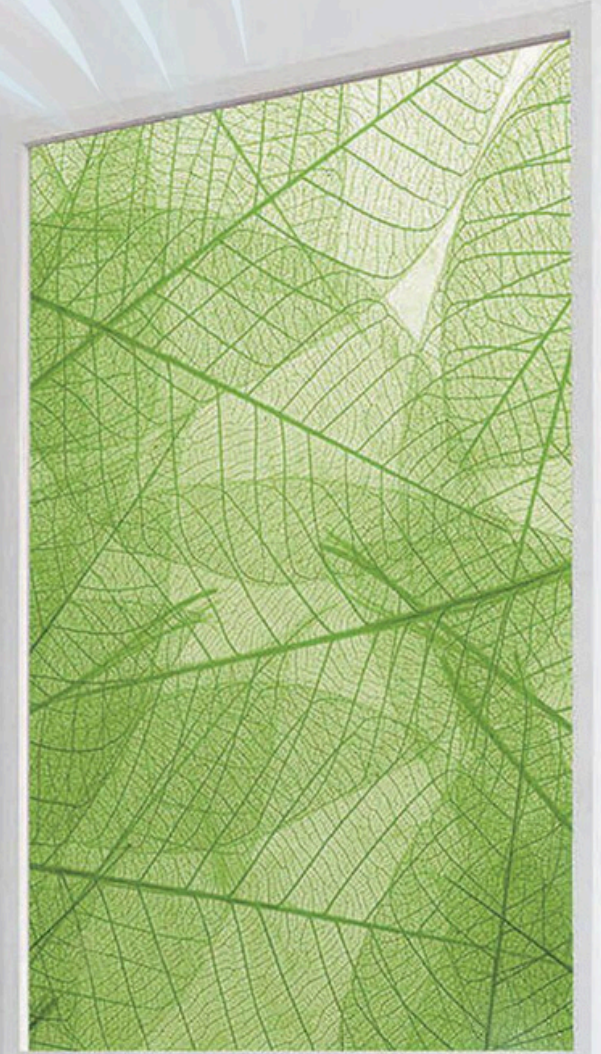

FLAT's wall-mounted design integrates seamlessly into home decor, and its built-in stereo Bluetooth speakers enhance convenience. Experience the future of air purification with FLAT™  
- where innovation meets elegance.

## ClogSense™ TECHNOLOGY

- Precisely monitor the actual airflow decline rate every day.

We abandoned the unscientific usage time countdown to indicate when the filter needs to be replaced. FLAT™ only reminds you of the best timing to replace it according to the actual blockage rate.

You will not replace it too early and waste it, nor replace it too late resulting in a reduced filtration effect.

## Smart Remote Control

- No matter how far away, Hearts are together.

APP remote operation : You can monitor and control it anytime, anywhere in the world.  
Share/Monitor : One FLAT™ can be easily shared with your family members and operated by multiple people remotely.

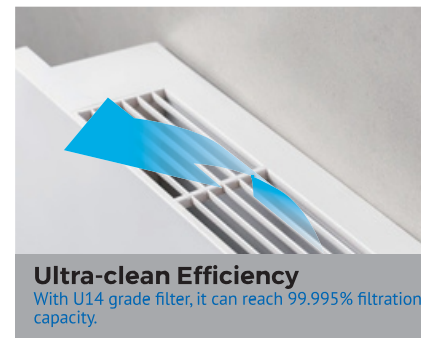

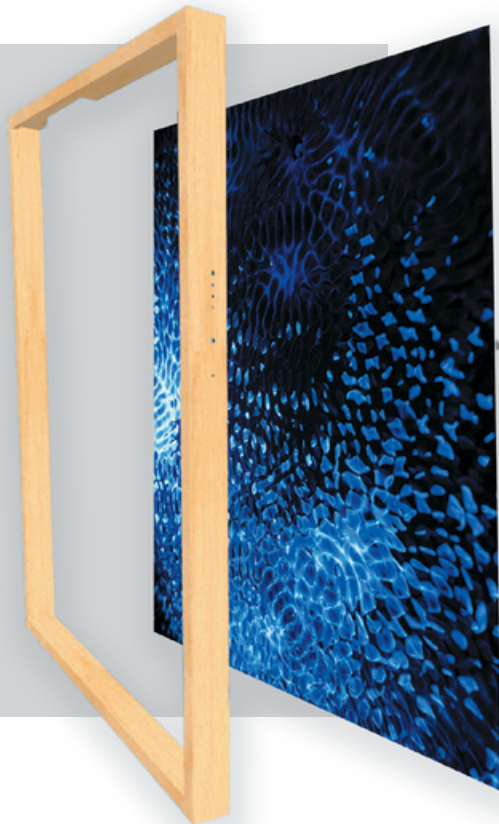

An invisible air purifier with wireless stereo.

Perfectly hidden in the room. Exquisite art for a healthy and smart life.

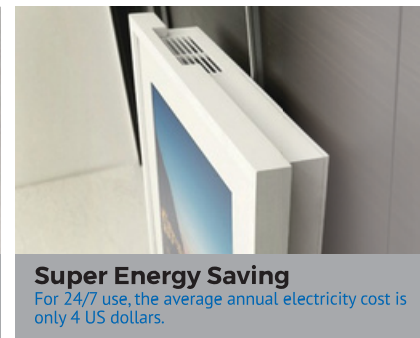

Its dust-holding-capacity (durability) exceeds the highest P4 standards by 1.8 times, reaching 21,471mg, which is 3-6 times that of some best-selling models on the market.

Under normal circumstances, even if the FLAT™ works around the clock, the filter's lifespan can last more than three years long.

Zero harmful ozone. Extremely safe.

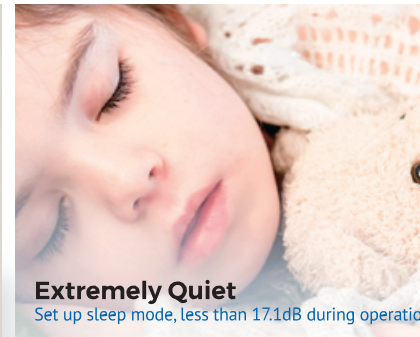

**Ultra-clean Efficiency**  
With U14 grade filter, it can reach 99.995% filtration capacity.

**Super Energy Saving**  
For 24/7 use, the average annual electricity cost is only 4 US dollars.

**99.99% Effective in Inhibiting Viruses**  
With UVC and AUROST™ photocatalytic coated, it inhibits over 99.99% of Coronavirus and 99.9997% H3N2.

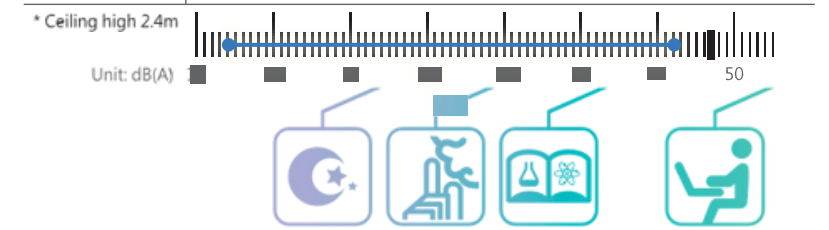

**Extremely Quiet**  
Set up sleep mode, less than 17.1dB during operation.

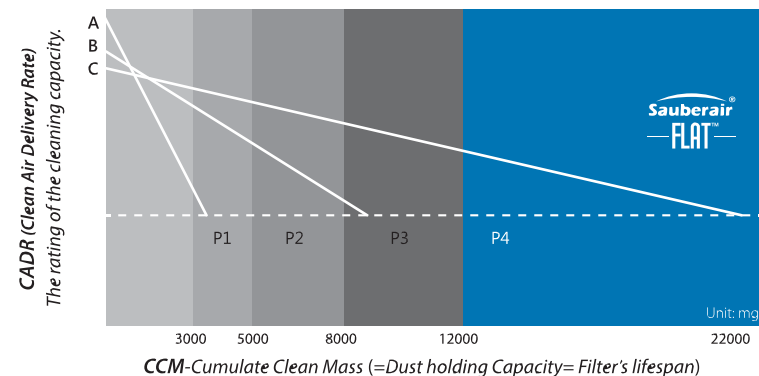

**ClogSense™ TECHNOLOGY**  
World exclusive airflow decline detection technology.

Fan Speed	1	2	3	4	5/ECO	5/Turbo

## 3~5-year-long Service Life Filter. High Dust Holding Capacity.

No harmful ozone. Maintenance free.

As the use time increases, the dust on the filter will increase, and the filter will gradually become clogged. FLAT's high CCM filter guarantees higher filtration effectiveness in long term.

## Accurate Sensing Tech.

- Complete air quality data.

Build-in laser aerosol sensor and German environmental sensor accurately measure PM2.5 / PM1 / Temperature / Humidity / VOCs / CO<sub>2</sub> / Atmospheric Pressure/Airflow.

FLAT™ is like a weather station at home. You can observe all these data from the APP, find out the discomfort you or your family may cause due to weather and air quality change, and respond earlier.

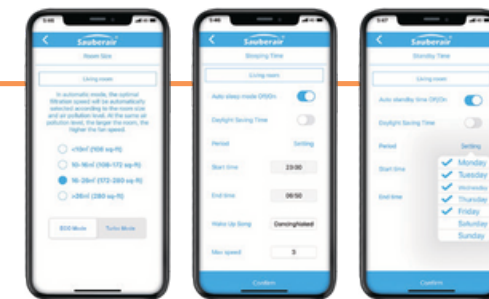

## Automated Schedule Setup

- Let FLAT™ invisibly integrate into your daily life.

The system will automatically adjust the best filtration level according to the air quality change and the room size you pre-setup via the app.

You can also set up the standby time, sleep time, and working/off day, allowing FLAT™ to protect your health by matching your daily schedule.

## We Uphold the Promise of Quality.

We attach great importance to safety and effectiveness.

FLAT™ has passed various national standards and obtains CE, UL, PSE and BSMI certifications. The filtration capacity complies with US and GB standards. FLAT's PM2.5 elimination rate is higher than 99.9%, according to the SGS test report.

Sauberair strictly controls the FLAT's quality from its R&D, production to delivery to your hands. It is our pride that FLAT™ won the "2020 Made-in-Taiwan Golden Select Award", and "2023 Taiwan Excellence Award". These are the strongest guarantee of FLAT's innovation and quality.
