

GRIDMENOW

LOCATION . INFORMATION . ACTION

GridMeNow's customizable mobile platform increases your overall situational awareness, improves your communications and operational efficiencies, and simultaneously enabling and assuring the safety and security of your workforce and assets.

ANYTIME. ANYWHERE. ANY SITUATION.

GridMeNow is a simple to use location-based reporting and communication system. We accelerate workforce adoption rates by using the same smart devices already carried by your workforce.

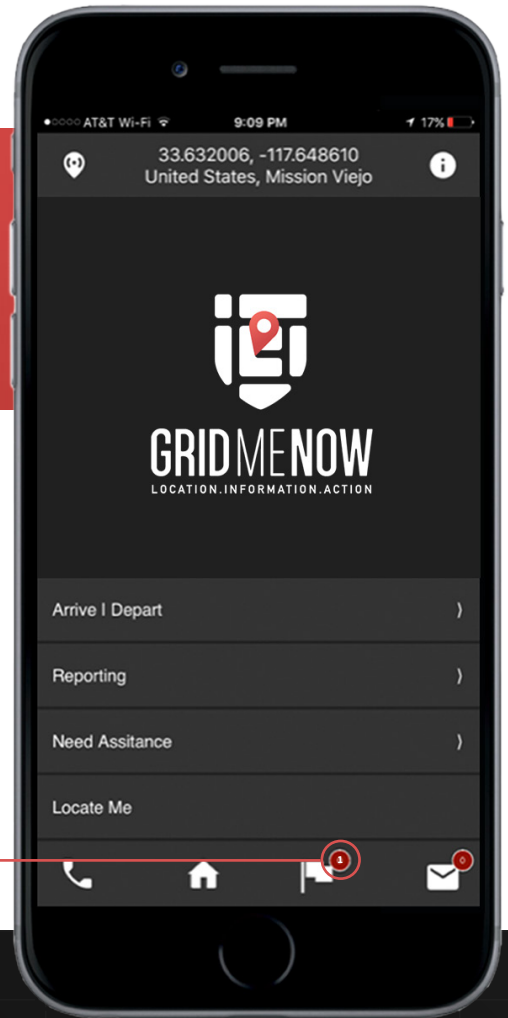

Our technology allows your workforce to quickly and easily share information with you around the globe 24/7 in real time.

GridMeNow utilizes the power of the cloud and smart device technologies to deliver you a digital dashboard displaying what your employees are seeing and experiencing in the moment.

Noble Energy is a great example of a company taking advantage of the power of GridMeNow. They have as many as 6,000 users traveling the world, fully accounted for and in continuous communications with their safety and security team through the GridMeNow platform.

There have been many instances where traveling employees and executives have been notified of an emergency situation in the area they are traveling. After being notified of the emergency situation they have been accounted for safely and given travel guidance and assistance through the GridMeNow platform.

Noble Energy uses multiple Web Management Portal “command posts” in the U.S. and the Eastern Mediterranean to divide up the responsibility of different security teams using GridMeNow.
