# GRID ME NOW
LOCATION.INFORMATION.ACTION

GRIDMENOW™ (GMN) is a simple to use, mobile, location-based communication system that quickly and easily enables 'real-time' information to be communicated between users and decision makers across a wide spectrum of situations and geographic locations. GridMeNow combines cloud computing and smartphone technology to produce a digital dashboard of 'real-time', on scene activities. GridMeNow's customizable mobile platform increases leaderships' overall situational awareness, improves communications & operational efficiencies, while simultaneously overseeing the safety and security of personnel and assets.

GRIDMENOW HAS SUPPORTED GLOBAL OPERATIONS WITH:

- Fortune 500 Companies
- Department of Homeland Security
- Department of Defense
- Environmental Organizations
- Municipalities
- Universities
ACCOUNTABILITY	OPERATIONS	SAFETY & SECURITY
Creation of 'Real-Time' Reports	Controlled by the GSOC or Remote Admins	World Wide Coverage (Cellular & Wifi)
Living Digital Log of All Activities	Real-Time' Situational Awareness	Encrypted Transmissions
Individual and/or Group Coordination	Creation of 'Real-Time' Reports	Digital Musters & Recall of Personnel
Geo-Fencing Capabilities	Bi-Directional Transmissions	Communication Redundancies
Content Stored in the Cloud	Digital Repository of Pertinent Documents	Geographic Trend Analysis

Accountability: An explosion occurs causing damage and destruction. Do you know where your employees are? Have they been accounted for? Is assistance required? GMN technology provides the ability to perform a digital muster of employee groups as compared with the traditional call tree. As employees respond to the "Auto Recall" request, individuals are automatically binned into groups: "Accounted For" or "Unaccounted For". Data is continually updated to provide leadership with an accurate picture of the situation as it unfolds and frees up decision makers to manage the situation vice managing the data necessary to help manage the situation.

Globally Dispersed Assets: A customer recently stated, "I have 4,000 globally dispersed individuals and no real idea where they are at any given time. Can GridMeNow help?" The goal with Asset & Personnel Management is to provide leadership and employees a tool to increase communication efficiencies, provide workforce visibility, and instantly share information from remote locations. No longer is it necessary for employees to describe their location or the level of damage they are witnessing. Remote personnel can capture and share pertinent information with key executives and others located thousands of miles away, with a near real-time view of activities transpiring on the ground.

Employee Lifeline: To support business needs, individuals must often travel or spend significant amounts of time in areas with elevated risks. Global corporations require employees and their families to live, work, and travel to remote and isolated locations. GMN is the perfect solution to increase an organization's situational awareness and has been referred to by customers as their "Overseas On-Star." When a situation arises that requires assistance, employees can instantly submit reports in real-time containing accurate GPS coordinates, text, images, and video. The "Auto-Location" function enables employees in duress to continually transmit their location, like a homing beacon, at defined location or time intervals. Geo spatial reports are visually rendered to assist in expediting the decision-making calculus while simultaneously providing employees with the confidence that a security team is only a push of a button away.For more information please contact:

Increased Operational Efficiency: The 'Geo-fencing' capabilities of the GMN platform creates instant notifications if an employee leaves a 'geo-fenced area. This needs to be investigated and the safety or whereabouts of an employee can be quickly ascertained. Another example is an oil spill. If satellite or cellular connections are not available, the GMN platform can be utilized to record pertinent information and quickly submit an Incident Report with photos and videos of the accident or failure. As these reports are received, they can be easily shared internally and with other agencies to increase their situational awareness, expedite response times and serve as a living digital log of the incident.
