BUSINESS TRAINING FOR IT PROFESSIONALS
at Nashville State Community College

IT skilled-based training is focused on building detailed technical knowledge.

Organizations need IT professionals to not just be technically competent but to feel empowered to clearly communicate ideas and concepts directly to stakeholders and business partners alike as never before. This requires a seismic shift in the ability to work with, communicate and collaborate with members of their own organizations, business partners, and internal and external customers and vendors.

LEARNING OBJECTIVES

Designed to broaden IT professionals' soft skills.

- Review project management best practices
- Create effective communication strategies
- Explore team dynamics
- Execute time management principles
- Develop outcome focused problem-solving techniques

PROGRAM TOPICS

Structured to address five challenges relevant to any business relationship.

1. What does project management mean?
2. What are effective methods of communication?
3. How can I be a team player?
4. Time management is impossible!
5. How do you manage conflict?

LEARNING APPROACH AND LOGISTICS

Each of the five program topics are discrete topics and are each covered in two 4-hour sessions. Registration can be for as few or as many as needed. Multiple formats are available:

- Online
- In-Person
- Hybrid and customizable
