

## 3D Splinting @Perth Integrated Health

Occupational Therapists at Perth Integrated Health use 3D Splinting for accurate, precision fit and rapid turnaround of Hand Splints.

These unique 3D splints are less cumbersome and restrictive than the traditional variety allowing for better breathing of the skin as well as aesthetically more appealing to the eye

Average scanning time is 15 mins and the 3D printing within 20 mins with most Splints available to the client within 24 to 48 hrs.

Costing less than a traditional splint and the perfect rehabilitation device for people with disabilities as well as sports injuries
