

Security in a Transforming Digital World

Scott Klososky

Quotable

“The frequency of the attacks and the potential attack scenarios are becoming so dangerous that we can’t wrap our brains around it.”

– Marina Krotofil, utility-control systems expert

TODAY

HUMALOGY® SCALE

So where is security on this scale?

95%

**Of all successful cyber attacks
are caused by human error**

Source: IBM Cyber Security Intelligence Index

Web 3.0 Future Connected Devices

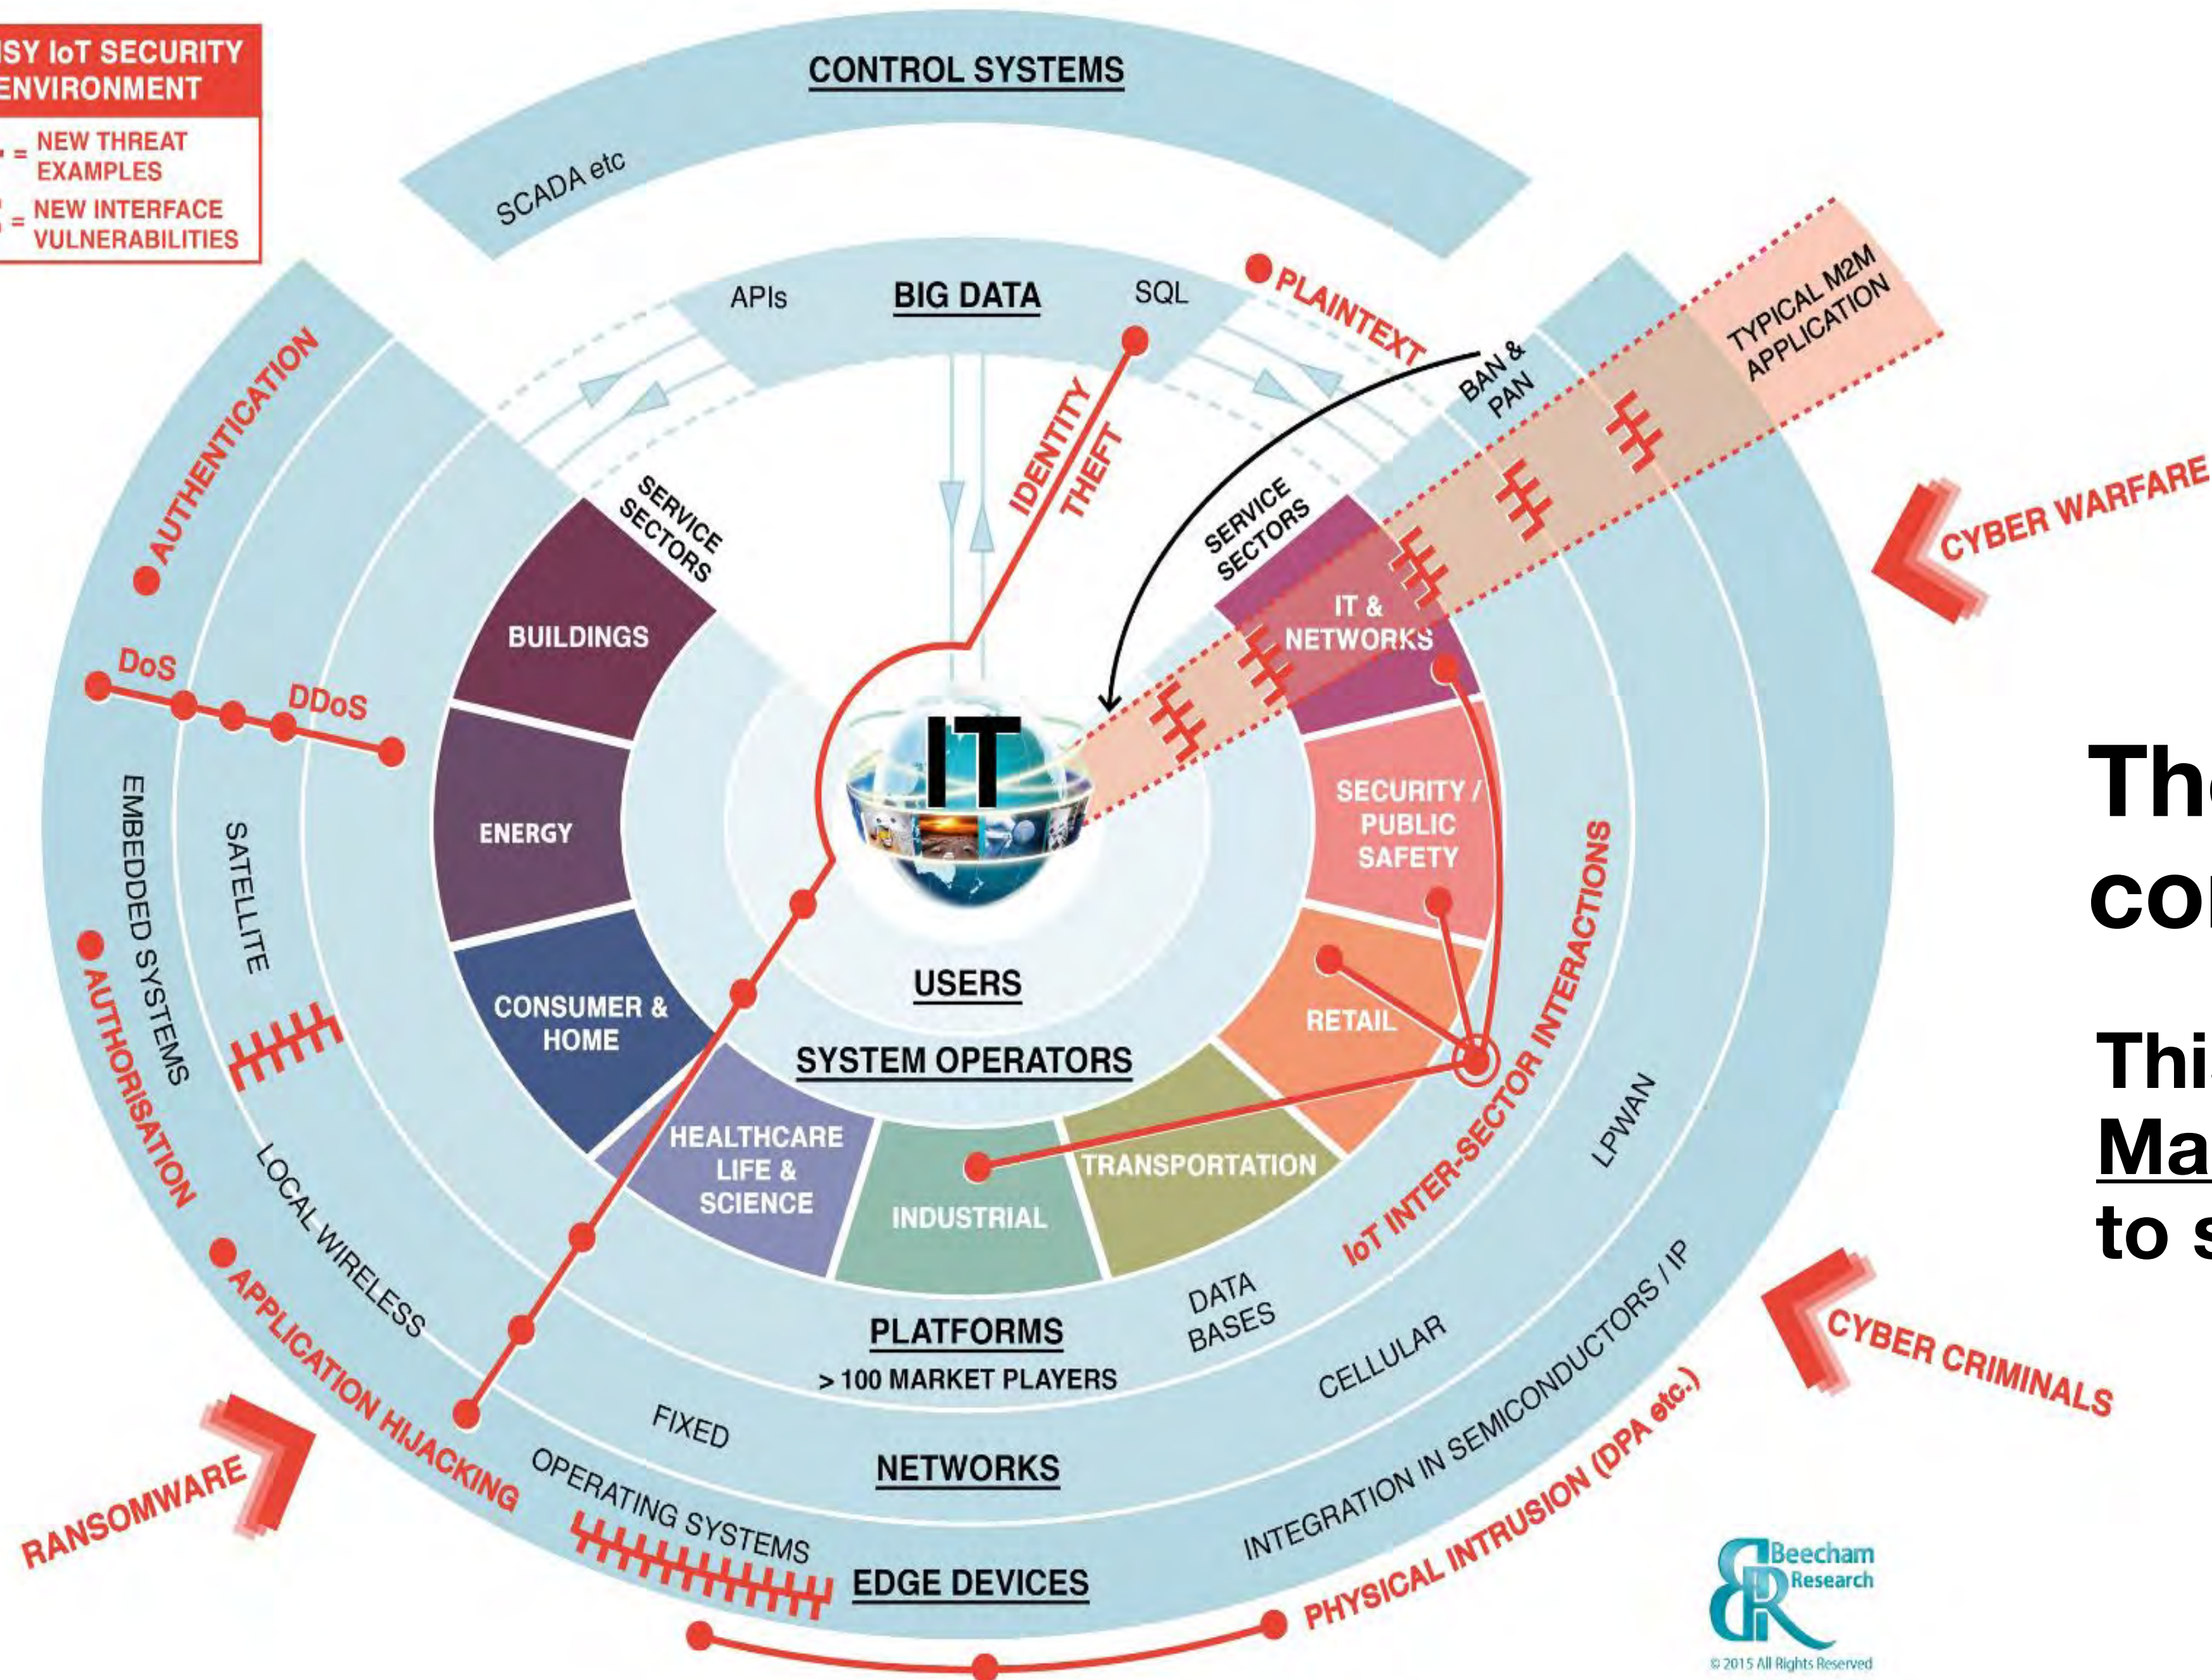

Edge security is getting much more difficult with IoT devices, SCADA, cameras, controls, and smart equipment

IoT Security Threat Map

NOISY IoT SECURITY ENVIRONMENT

- = NEW THREAT EXAMPLES
- ⚡ = NEW INTERFACE VULNERABILITIES

The Attack Surface continues to grow

This will force us to use Machine Intelligence to secure the perimeter

Defining Superpowers: A Massive Fork in the Road for Security

Robotics: Physical & Virtual task handling

Software-Based Intelligence: AI, DSS

Sensing & Recognition: Sensors & Smart Devices

Self Learning Systems: Machine & Deep Learning

Defining Superpowers: A Massive Fork in the Road for Security

**HUMAN
INVOLVMENT**

**TECHNOLOGY
INVOLVMENT**

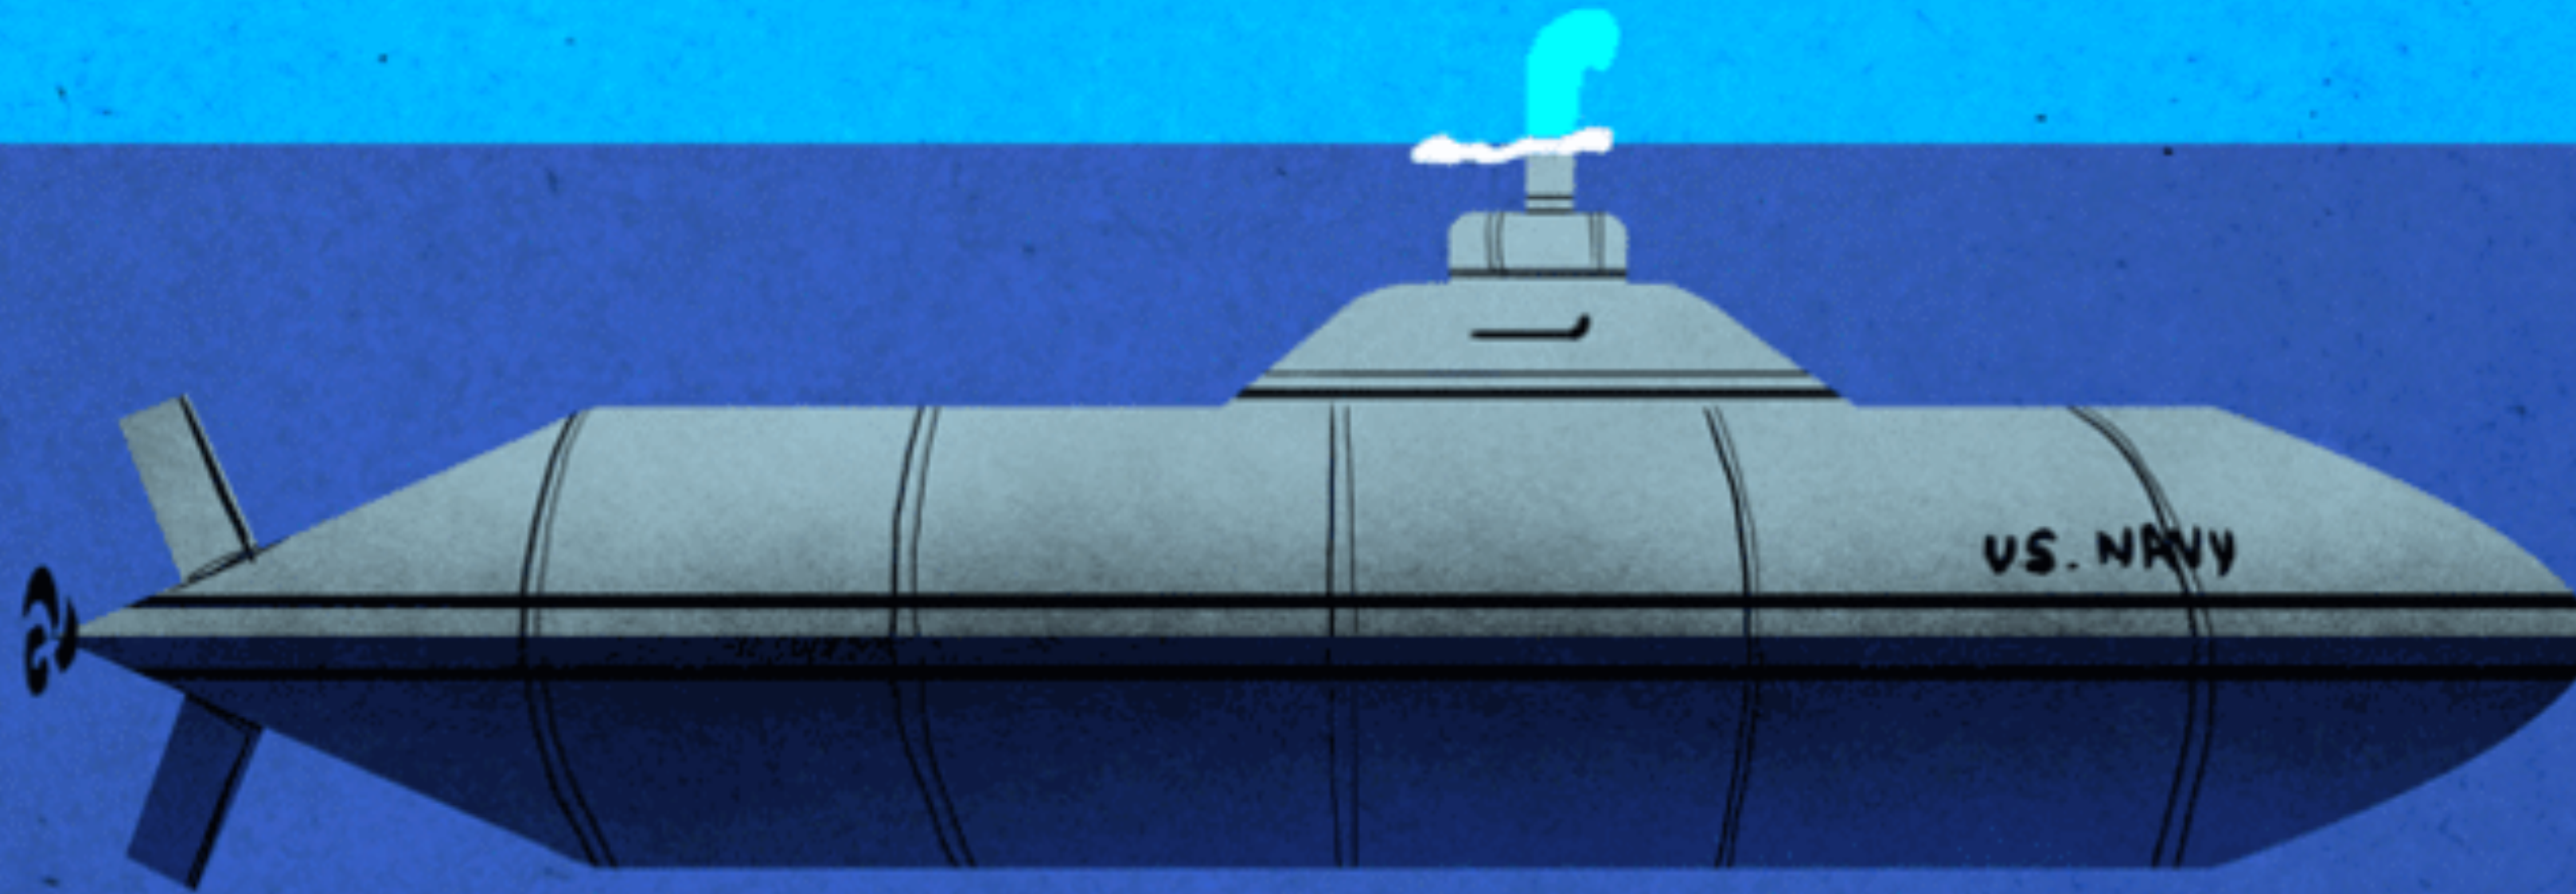

**Adding
Superpowers
to an organization
can shift the Humalogical balance
to the most efficient and secure place**

Defining Superpowers: A Massive Fork in the Road for Security

**Adding
Superpowers
to an organization
can shift the Humalogical balance
to the most efficient and secure place**

Machine Intelligence

David Ferrucci, the developer of IBM Watson, was asked if the system can think...

He answered, "Watson can think like a submarine can swim"

Machine Intelligence Ecosystem

Robotics (Fixed & Ambulatory)

RPA (Robotic Process Automation)

Artificial Intelligence

Voice (NLP), Vision & Text Recognition

Machine Learning

Deep Learning

Recommendation Engines (DSS)

Realtime Predictive Analytics

Cognitive Computing

Machine Intelligence Integration

Robotics + AI + NLP = Smart Machine Sentries

**The combination of intelligent systems
will create machines that can perform
at levels far above humans**

Machine Intelligence Integration

Robotics + AI + NLP = Smart Machine Sentries

**AI + Deep Learning + Predictive Analytics
= Smart systems that can predict attacks**

AI + NLP + ML = Chatbots & Voice Assistants that oversee security

Vision Analytics + AI + ML = Intelligent surveillance & identification

Quote of the Day

“Educating doctors is going to take too long.”

—Rogier Janssens, Beijing-based general manager of a biopharma company, on why China needs to embrace AI, robots, and smartphones in medicine. ([Reuters](#))

*We Desperately
Need Machine
Intelligence in
Order to Advance*

*We Desperately
Need Machine
Intelligence in
Order to Advance*

**To take over jobs that are dangerous for people
(i.e. physical security, violence response)**

**To take over making decisions that require
access to large amounts of ever changing data
(i.e. threat assessment)**

**To reconfigure security capabilities in real-time
based on new attack vectors
(i.e. cybersecurity defense)**

**To solve complex problems at faster speeds
and with a higher rate of effectiveness
(i.e. event management)**

ΔTRICORPS
TECHNOLOGIES

With little in the way of Digital Borders, countries are struggling to balance openness with security, while pondering digital walls for nationalistic purposes

Businesses are being used as Pawns in Cyber Warfare plans. This creates a need to protect themselves, or depend wholly on government defense plans

The scale of Organized Digital Crime is growing quickly and it is getting difficult to discern between criminals and state sponsored groups

Integrated Security is the only path for the industry because physical, electronic & Cyber security cannot defend future attacks on their own

INTSEC MODEL (Integrated Security)

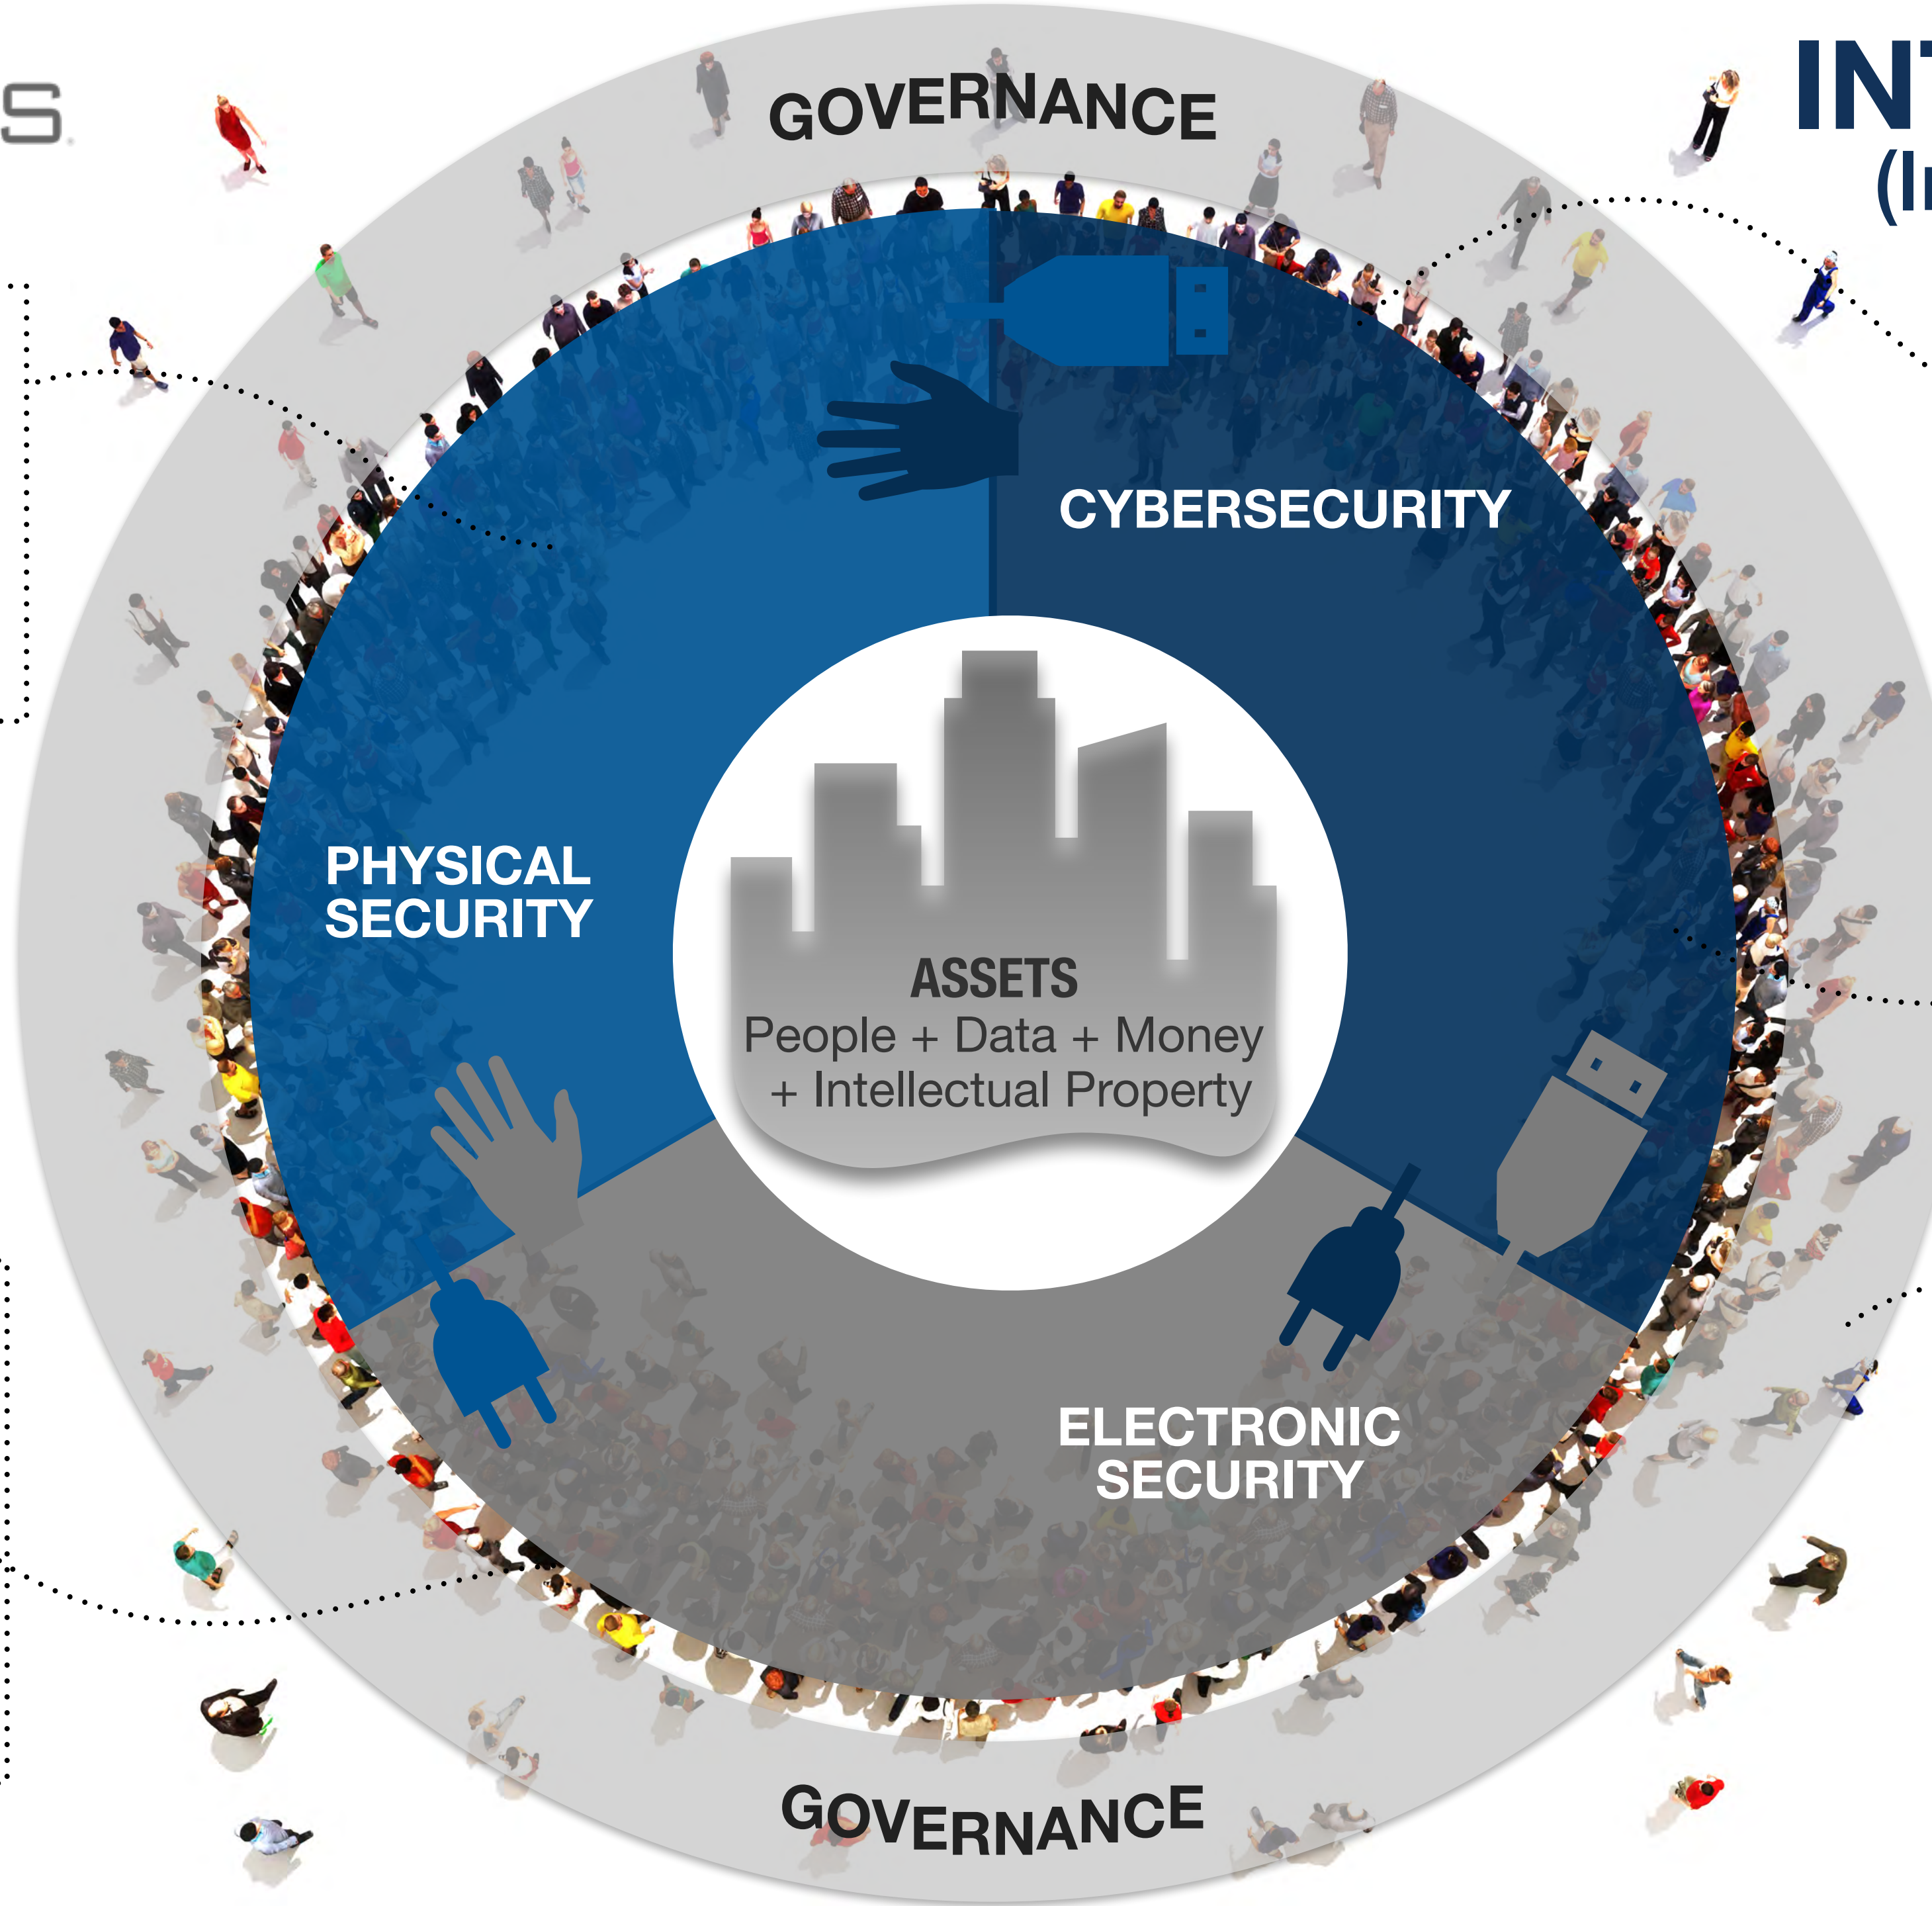

PHYSICAL SECURITY

Buildings, Guards, Gates and other physical measures in place to secure your assets.

The Physical Firewall

ELECTRONIC SECURITY

Devices ranging from surveillance cameras to access control badges, biometric scanners, or facial recognition systems.

HUMANS

The lifeblood in and around your organization that supports the success of your mission, but also the first line of defense from any attack:

The Human Firewall.

CYBERSECURITY

The systems you have in place to protect your electronic data and operational systems

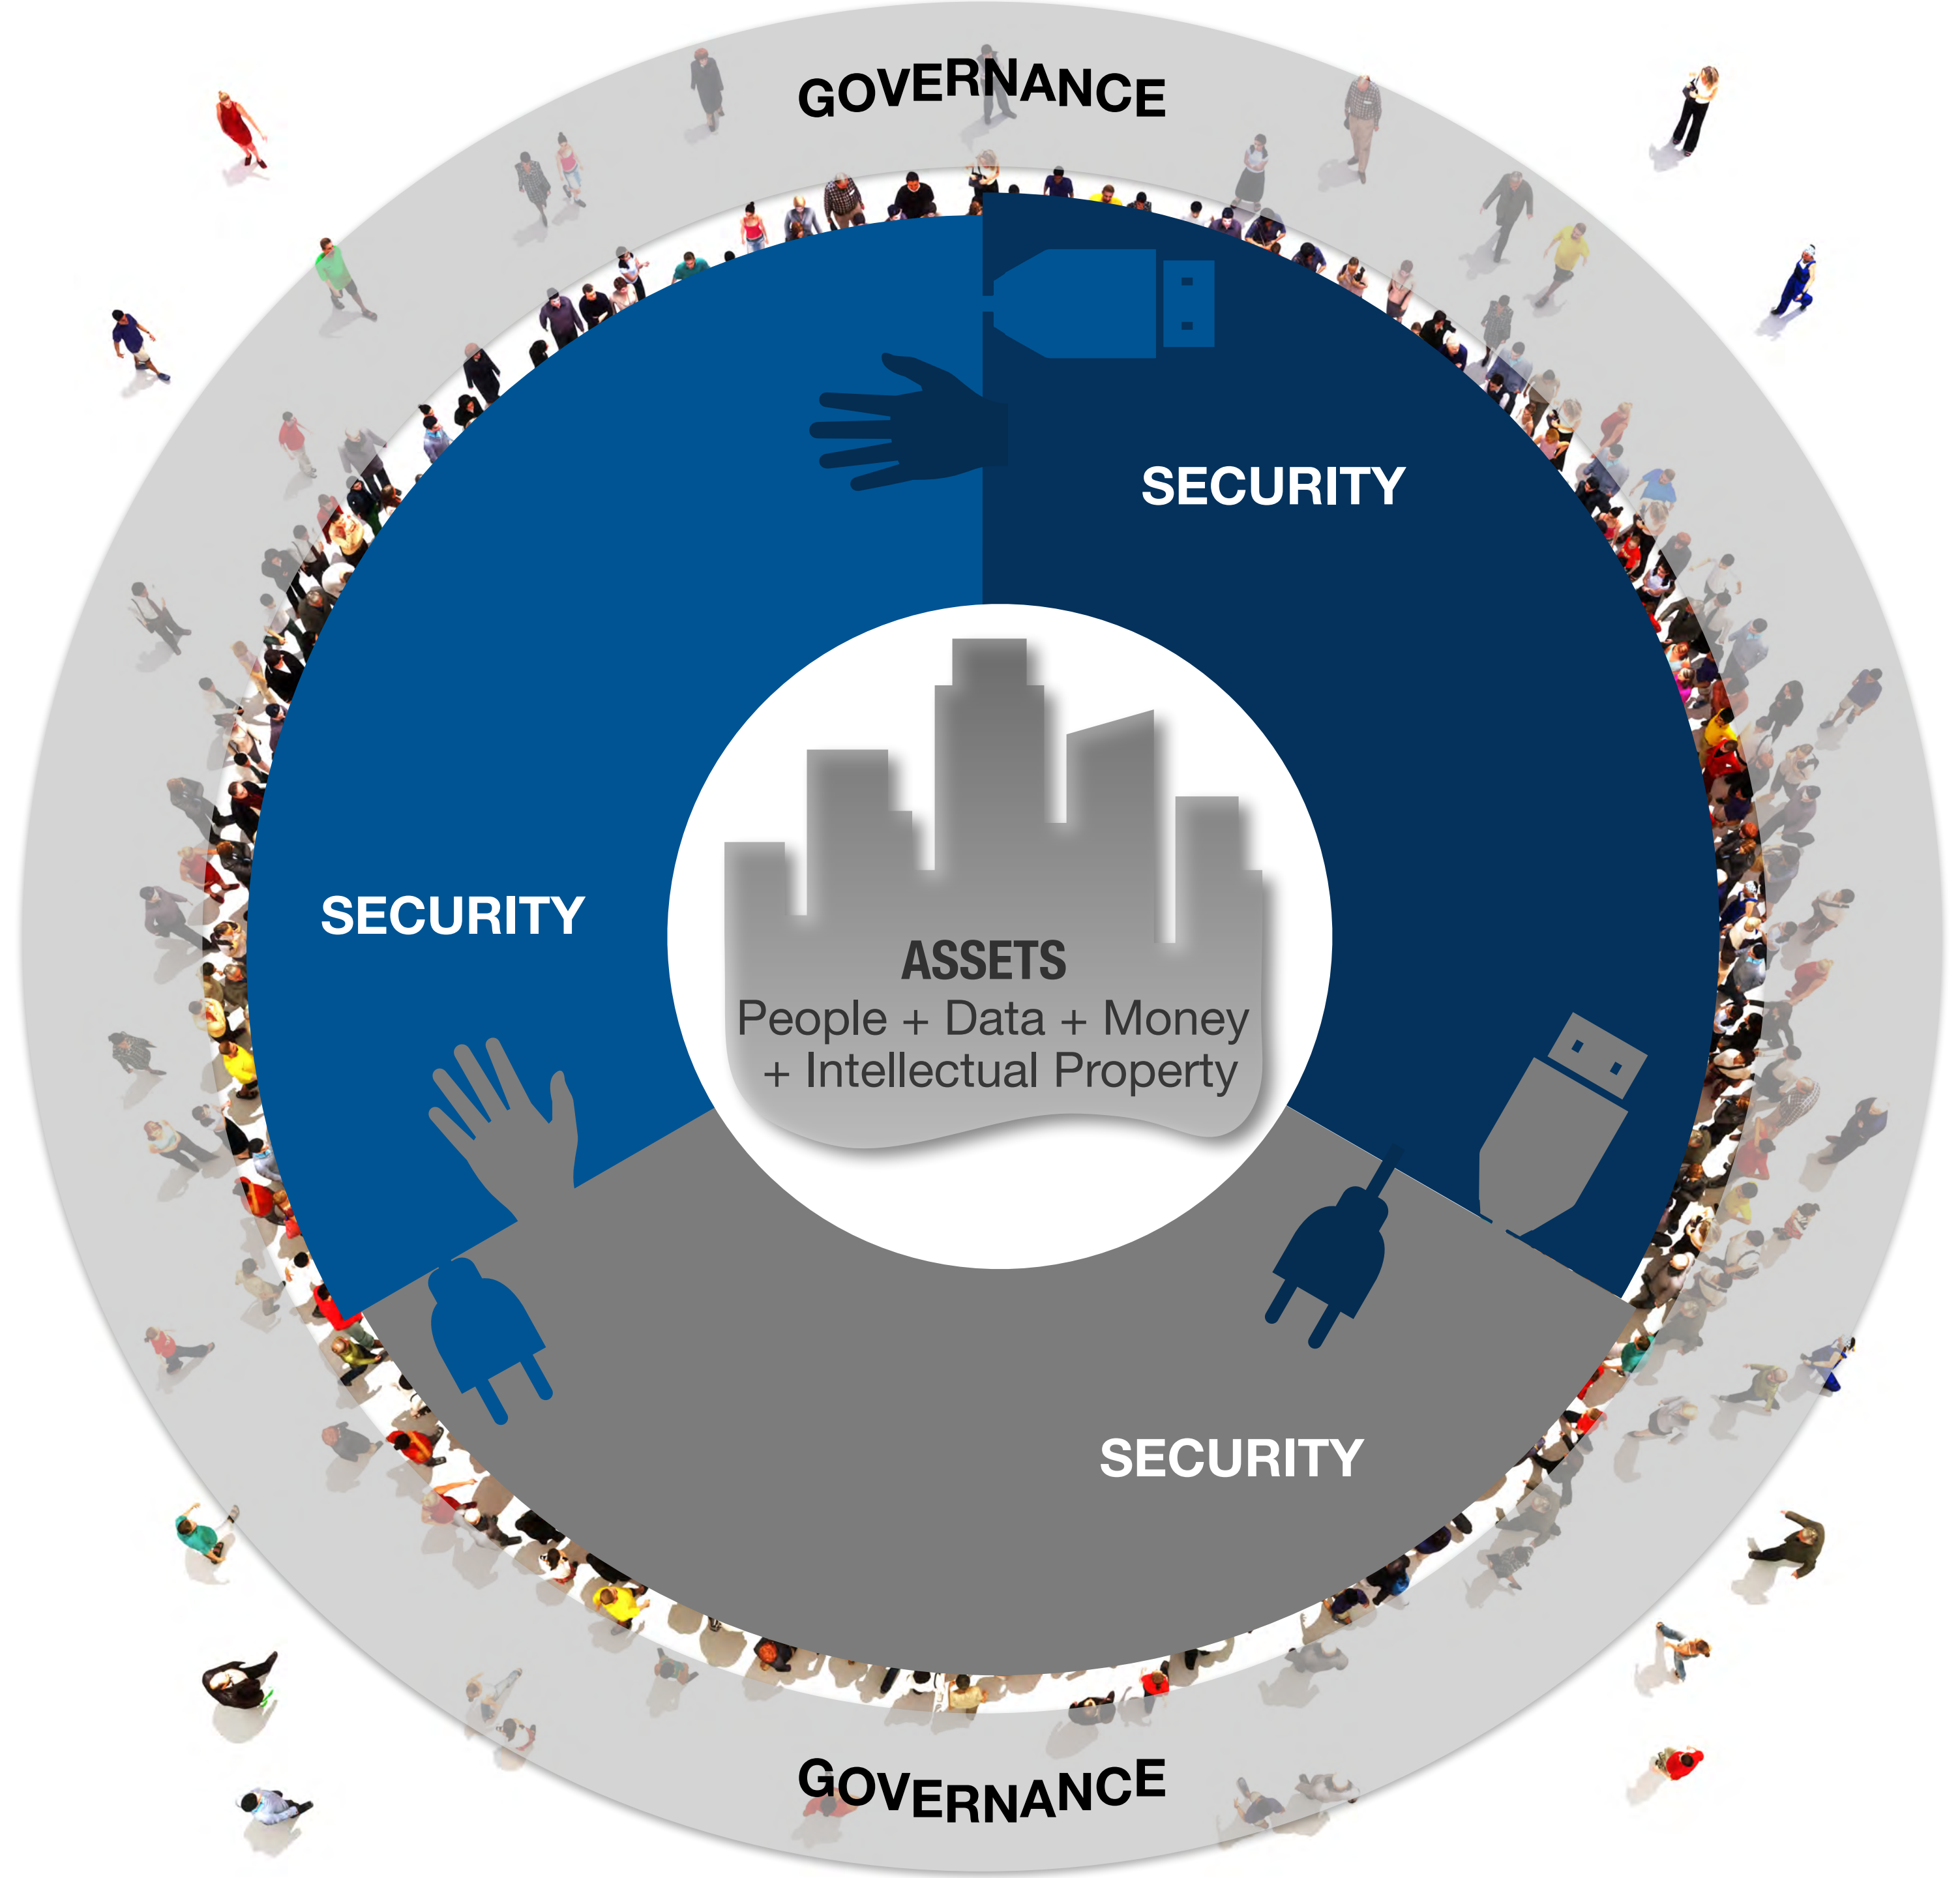

The Network Firewall.

GOVERNANCE

The policies and rules set in place which support ongoing excellent security processes that keep your assets protected.

In the end, there will only be:

- Risk Analysis
- Security
- Event Management

AN INTEGRATED SECURITY MODEL

ALIGN the Security Strategy

with the Risk Strategy

AN INTEGRATED SECURITY MODEL

RISK TOLERANCE (ESRM)

GOVERNANCE (P&P)
