Realistic looking and feeling tissues

FOR PATIENTS

Better outcomes

KEY FEATURES

- Accurate tissue fidelity with realistic skin tissue planes, fat thickness, movement, and puncture forces.
- Unparalleled anatomic fidelity, with patient specific anatomic replica and materials that emulate the look and feel of human tissues.
- Accommodates the most common mistakes, of lateral, superior, and through & through punctures.
- Lateral tracheal movement and frictional forces that supports the stabilization challenges of a realistic pediatric trachea.
- Accurate cricothyroid membrane puncture forces for clinical training transfer.
