

PVC WINDOW JAMB EXTENSION FORM (FLAT WINDOW SURFACE)

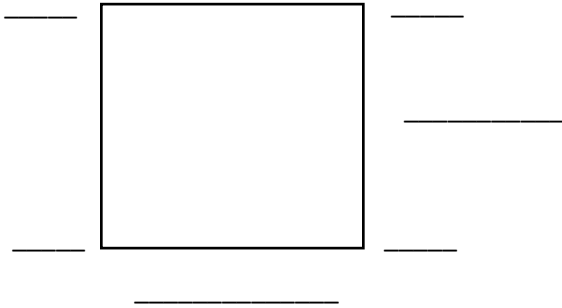

The depth of the wall usually varies from corner to corner. This means that if we did one standard depth for all 4 corners, the installer would have to plane/sand off any material overhang once the jamb is installed. To avoid this hassle, we request the depth of each corner so that we can do our best to achieve a flush window jamb.

Ex. Kitchen South

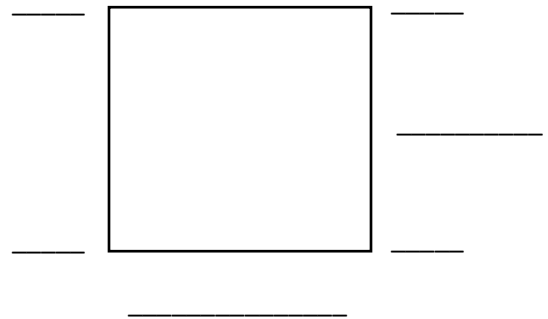

If your windows are without drywall returns (U-Channels), please measure from the outside to the outside of your window. Remember to take the depth measurement from the flat surface of the window out to the drywall for an accurate depth measurement.
