### **Neuroventions Clinic leads the way in compassionate patient care**

**Winter Park, FL, May 1, 2023:** Neuroventions Clinic, an established neurology practice that has been serving the Winter Park community since 2019, is pleased to announce its holistic and compassionate approach to patient care. Founded by Dr. Rekha Gandhi, the practice focuses on comprehensive care for patients across a wide spectrum of neurological disorders.

Unlike other medical practices, Dr. Gandhi incorporates holistic medicine principles into her approach. This approach to patient care focuses on finding root causes of illness rather than only treating symptoms. Through the interplay of genetics, environment and lifestyle factors, Dr. Gandhi is able to create personalized treatment plans that address each patient's unique needs and promote optimal health.

"Our approach to patient care is centered around making every patient feel seen and heard," said Dr. Gandhi. "We believe that by taking the time to really listen to our patients and understand their unique situations, we can better identify the root causes of their neurological conditions and provide more effective treatment."

Dr. Gandhi, a board-certified neurologist with 15 years of medical experience, has a rich history of providing quality healthcare services to patients. She has broad experience in seizures, epilepsy surgery and having established an epilepsy monitoring unit at St. Vincent's Medical Center in Indiana. Prior to starting her practice, Dr. Gandhi served as both a Principal Investigator and Sub-Investigator on multiple clinical trials in various therapeutic indications including Alzheimer's Disease, Parkinson's Disease, migraines, seizure disorders, sleep disorders, ADHD, depression, bipolar disorders, diabetes and NASH. Previously, she was also the Outpatient Director for an outpatient epilepsy monitoring unit at St. Vincent Medical Group. Dr. Gandhi earned her medical degree from St. George's University School of Medicine and completed her neurology residency and Epilepsy Fellowship at Albany Medical Center.

"Our goal is not just to treat our patients' conditions, but to help them achieve a better quality of life overall," said Dr. Gandhi.
