

Collection of Immunization Data for children in childcare centers.

Ontario's Childcare and Early Years Act, 2014 (CCEYA) states that a childcare center must ensure that all children in their center have complete immunization appropriate to their age **prior** to admission to the childcare center. A record of immunization must be kept as part of each child's record and updated as new immunizations are received.

Children in licensed childcare centers in Ontario must be vaccinated against diphtheria, tetanus, polio, measles, mumps, rubella, meningococcal disease, pertussis (whooping cough), varicella (chicken pox), rotavirus, pneumococcal disease, and haemophilus influenza type b.

1. COMPLETE THE FOLLOWING INFORMATION FOR YOUR CHILD

Last name:	First name:	
Date of birth: (yy/mm/dd)	Health Card Number:	Gender:
Address:	City/Town:	Postal Code:
Parent/Guardian's Name:	Home #:	
Childcare Center your child is attending:	Work or Cell #:	

2. ATTACH YOUR CHILD'S IMMUNIZATION RECORD/EXEMPTION

- If your child has already been vaccinated, attach a photocopy of your child's immunization record to this form and return it to the childcare center.
- If your child has already completed an exemption under the Childcare and Early Years Act (CCEYA) attach a photocopy of your child's exemption to this form and return it to the childcare center.
- If you do not want your child vaccinated, visit Northeastern Public Health's website, and follow the steps on obtaining a childcare center exemption. Please note, you will need to complete a different form once your child starts school.

Date: _____ Parent/Guardian Signature: _____

Collection of this information is authorized under the Childcare and Early Years Act, 2014 (CCEYA). This information is used to ensure that all appropriate personal care and public health services are provided, and the necessary statistics are kept. Questions about this collection should be directed to the daycare operator.

Keep our children Healthy and our childcare centers disease-free

It takes all of us to protect each of us! When you vaccinate your children, you protect them from harmful diseases as well as protect other children around them.

PERTUSSIS (Whooping Cough)

Whooping cough is a contagious disease that causes prolonged cough in children, adolescents, and adults. Whooping cough can be serious in infants. This cough can cause children to vomit or stop breathing for a short period of time. It can also cause serious complications such as pneumonia, as well as brain damage and seizures in babies.

VARICELLA (Chickenpox)

Chickenpox is a contagious disease that can cause fatigue, mild headache, fever up to 39°C, chills and muscle or joint aches a day or two before a red itchy, blister-like rash begins. Complications from chickenpox can be serious and include bacterial skin infections, ear infections, and pneumonia.

MENINGOCOCCAL DISEASE

Meningococcal infections can cause diseases, including meningitis. Meningitis is a very serious infection that occurs in people who have either encountered an otherwise healthy person who is a “carrier” or encountered another person sick with the disease. Meningococcal disease can also cause blood poisoning and infections to the brain and spinal cord.

TETANUS

Tetanus or lockjaw is a serious disease that can happen if dirt with the tetanus germ gets into a cut in the skin. It can cause cramping of the muscles and dangerous convulsions.

DIPHTHERIA

This is a serious disease of the nose, throat, and skin. It causes a sore throat, fever, and chills. Diphtheria can be complicated by breathing problems, heart failure, and nerve damage.

POLIO

Polio is a serious disease that people can get from drinking water or eating food with the polio virus in it. It can also be spread from person to person. Polio can cause nerve damage, paralyze someone for life, or cause death.

MUMPS

Mumps is a contagious disease caused by a virus and is characterized by fever, headache as well as swelling of the cheek, jaw, and neck. It can cause complications such as hearing loss and inflammation of the brain.

MEASLES

Measles is a highly contagious viral infection. It causes high fever, cough, rash, runny nose, and red eyes. Measles can cause complications such as ear infections and pneumonia.

Rubella

Rubella is a contagious disease caused by a virus. Rubella may cause fever, rash, headache, mild runny nose, and red eyes (conjunctivitis). It can cause serious complications in pregnant women and their babies, and arthritis in adults.
