

PLANT NAME: FIDDLE LEAF

- **Light Requirements:**
 - Place your Fiddle Leaf Fig in a location that receives bright, indirect sunlight.
 - Avoid direct sunlight as it can scorch the leaves.
- **Watering:**
 - Water your Fiddle Leaf Fig thoroughly but allow the top inch of soil to dry out between waterings.
 - Overwatering can lead to root rot, while underwatering can cause the leaves to wilt.
 - Use room temperature water and ensure proper drainage to prevent waterlogged soil.
- **Humidity:**
 - Fiddle Leaf Figs prefer moderate to high humidity.
 - Increase humidity levels by misting the leaves regularly or placing a tray of water near the plant.
 - Avoid placing the plant near drafts or heating vents, which can cause dry air.
- **Temperature:**
 - Fiddle Leaf Figs thrive in temperatures between 60°F to 75°F (15°C to 24°C).
 - Protect the plant from extreme temperature fluctuations and keep it away from cold drafts.
- **Fertilization:**
 - Feed your Fiddle Leaf Fig with a balanced, water-soluble fertilizer once a month during the growing season (spring and summer).
 - Follow the instructions on the fertilizer package for proper dosage.
- **Pruning:**
 - Trim off any yellow or brown leaves to maintain the plant's appearance.
 - If the plant grows too tall or becomes leggy, you can prune the top to encourage branching and a bushier growth habit.
- **Potting and Repotting:**
 - Use a well-draining potting mix suitable for indoor plants.
 - Repot your Fiddle Leaf Fig every one to two years, or when it becomes root-bound.
 - Choose a slightly larger pot and ensure it has drainage holes to prevent waterlogging.
- **Pests:**
 - Keep an eye out for common pests such as spider mites and scale insects.
 - Regularly inspect the leaves for any signs of infestation, like webs, sticky residue, or small bugs.
 - Treat any pests promptly with appropriate insecticidal soap or horticultural oil.
- **Special Considerations:** Fiddle Leaf Figs can be sensitive to changes in their environment, so avoid moving them frequently. They may also require some time to adjust to a new location or change in lighting conditions.
