ASATERRA

SOLUTION DATASHEET
AWS-hosted SaaS · Coming soon to AWS Marketplace

Operational intelligence for real estate and multi-site facilities

Asaterra brings property and asset information, workflows, monitoring data, and operational records into one shared view, so operators can see what is happening across their portfolio and act on it.

THE PROBLEM

Facility data is usually split across separate tools. Work orders, alarms, inspections, documents, inventory, and asset lists live in different systems, and teams spend time searching, comparing, and re-entering information before they can understand risk or assign action.

KEY CAPABILITIES

One shared property and asset record
Work orders, monitoring data, inspections, inventory, documents, and event history, tied to the property and asset they belong to.

Reliable asset-level history
A consistent portfolio-to-component model ties every event, inspection, document, and signal to its asset.

Modular applications on one foundation
Start with Atlas and the modules a site needs, then add sites, assets, and modules as the portfolio grows.

Works alongside existing systems
An API and integration layer complements the CMMS, building-management, and property-management systems in place.

Configured for each property type
Vertical configurations adjust asset classes, workflow templates, and integrations while the platform core stays the same.

Shared visibility across sites
One view of locations, equipment, status, and history, with fewer manual handoffs and less scattered information.

THE PLATFORM

Atlas	Signal	Vector	Vault	Timeline
Foundation: sites, assets, users, audit	Telemetry, equipment status, alerts	Inventory, movement, consumption, variance	Records, manuals, filings, service evidence	Events, maintenance, incidents, lifecycle

WHO IT'S FOR

Restaurants
HVAC, refrigeration, and fire systems across locations

Shopping and retail centers
Building envelope, electrical, signage, and parking

Petroleum retail and fueling sites
Tanks, dispensers, and site equipment

Other multi-site operators
Real estate portfolios and mixed-use properties

BUILT ON AWS

Asaterra is hosted entirely on AWS, using managed services for compute, data, security, integration, and monitoring. Core services include:

- Amazon ECS on AWS Fargate
- AWS Lambda
- Amazon API Gateway
- Amazon Aurora
- Amazon Cognito
- Amazon CloudFront
- AWS WAF
- Amazon S3
- Amazon EventBridge
- AWS Step Functions
- Amazon SQS
- AWS Site-to-Site VPN
- Amazon CloudWatch
- AWS CloudTrail

On the roadmap: an AI agent built on Amazon Bedrock (planned; not yet available).

COMING SOON TO AWS MARKETPLACE

$1,800 per site / year

Annual SaaS contract. Each site includes Atlas, Signal, Vector, Vault, and Timeline. Private offers available for multi-site portfolios.

Onboarding, configuration, integration, training, and customer success are included from the Asaterra team.
