DESIGN

The Scoundrel Hull has proven itself after 30 years in production with our sister boat line *McKee Craft*. Unlike the traditional *Flat Bottom* Skiff, The Scoundrel has a modified cathedral hull design that does not slide! It's "Vee" Forefront offers a drier, softer ride without sacrificing shallow draft. We know that no one interior layout will suit every boater. So we build the hull to our rugged specifications and add a molded fiberglass cap. This allows you almost total design freedom to layout that perfect boat. The fiberglass cap finally gives you that much needed place to mount rod holders, make hidden wiring runs, and thru bolt hardware. See your dealer today, they will work for you, to bring together the Scoundrel hull, your ideas, and high grade accessories to build that boat you've been looking for!

CONSTRUCTION

At Scoundrel we use only high grade marine resins, fiberglass, and gelcoats to insure you of the highest of quality. Each boat is carefully hand crafted by our skilled builders using our 30+ years of boat building experience. Each Scoundrel has a layer of handlaid 24oz. Woven Roven waterline and below. This is doubled in the keel. Stringers are not only completely glassed in place but bedded in a high strength bonding compound.

All this is backed by our 5 Year Limited Warranty (See Dealer for details) If you are looking for a seaworthy boat built to a standard as high as yours then take a look at the new Scoundrel.
