APPLICATION INFORMATION

Penatec

SOIL PENETRANT-WETTING AGENT-SURFACTANT

APPLICATION:

Initial application may require the full 32 ounces per acre rate. However, the monthly rate should be in the 3 to 10 ounces per acre range. In some cases the rates may need to be increased slightly and in others they may be reduced.

If you have a severe stress problem and extreme compaction or super hydrophobic soils you may need to apply 64 to 128 ounces per acre for the first treatment. After the initial full rate application, you can start normal recommended application rates. In a small number of cases a repeat of the 64 to 128 ounce may be required.

ALWAYS IRRIGATE IMMEDIATELY AFTER SPRAY APPLICATION

As a surfactant and adjuvant add 4 to 6 ounces to your sprayer mixes. Used with products such as iron will result in faster green-up. It will create faster penetration with foliar product applications.
