

PENATEC™

BETTER DUST CONTROL

MAKING WATER WETTER & RETAINING MOISTURE LONGER

Controlling dust with water trucks alone requires multiple trips to maintain moisture. This type of control is costly and time consuming.

PENATEC™ when added to the dust control water will combine with the water forming a viscous solution. The new solution will retain moisture up to 60% longer than plain water. It will produce a surface film that will prevent rapid evaporation and will help to reduce run off.

PENATEC™ also contains soil penetrant. This allows for deeper penetration into the dust bed and the harder substructure.

PENATEC™ is long lasting and will reactivate when water is applied. Using this low cost product will reduce water runs by as much as 50-75%.

PENATEC™ is non corrosive and environmentally safe

PENATEC™ is available in 5 gallon pails, 55 gallon drums, and 275 gallon totes.

Follow label rates and application instructions.
