#### Touchstone<sup>®</sup> TM802 Telephony Modem User's Guide

Get ready to experience the Internet's express lane! Whether you're checking out streaming media, downloading new software, checking your email, or talking with friends on the phone, the Touchstone TM802 Telephony Modem brings it all to you up to eight times faster than standard DOCSIS 2.0 cable modems. All while providing toll quality Voice over IP telephone service.

The Touchstone Telephony Modem provides an Ethernet connection for use with either a single computer or home/office Local Area Network (LAN). The Touchstone Telephony Modem provides for up to two separate lines of telephone service.

Installation is simple and your cable company will provide assistance to you for any special requirements. The links below provide more detailed instructions.

|        |                    |                         |              |                           |       |                 |          |

#### **Safety Requirements**

ARRIS Telephony Modems comply with the applicable requirements for performance, construction, labeling, and information when used as outlined below:

#### CAUTION

**Risk of shock** 

Mains voltages inside this unit. No user serviceable parts inside. Refer service to qualified personnel only!

#### CAUTION

Potential equipment damage Potential loss of service

Connecting the Telephony Modem to existing telephone wiring should only be performed by a professional installer. Physical connections to the previous telephone provider must be removed and the wiring must be checked; there must not be any voltages. Cancellation of telephone service is not adequate. Failure to do so may result in loss of service and/or permanent damage to the Telephony Modem.

#### **CAUTION** Risk of explosion

Replacing the battery with an incorrect type, heating a battery above 75°C, or incinerating a battery, can cause product failure and a risk of fire or battery explosion. Do not disassemble. Do not dispose of in fire. Keep away from children. Recycle or dispose of used batteries promptly and in accordance with local ordinances.

- The Telephony Modem is designed to be connected directly to a telephone.
- Connecting the Telephony Modem to the home's existing telephone wiring should only be performed by a professional installer.
- Do not use product near water (i.e. wet basement, bathtub, sink or near a swimming pool, etc.), to avoid risk of electrocution.

#### FCC Part 15

This equipment has been tested and found to comply with the requirements for a Class B digital device under Part 15 of the Federal Communications Commission (FCC) rules. These requirements are intended to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Changes or modifications to this equipment not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

|        |                    |                         |              |                           |       |                 |          |

#### **European Compliance**

This product complies with the provisions of the Electromagnetic Compatibility (EMC) Directive (89/336/EEC), the Amending Directive (92/31/EEC), the Low Voltage Directive (73/23/EEC), and the CE Marking Directive (93/68/EEC). As such, this product bears the CE marking in accordance with the above applicable Directive(s).

A copy of the Declaration of Conformity may be obtained from: ARRIS International, Inc., 3871 Lakefield Drive, Suite 300, Suwanee, GA 30024.

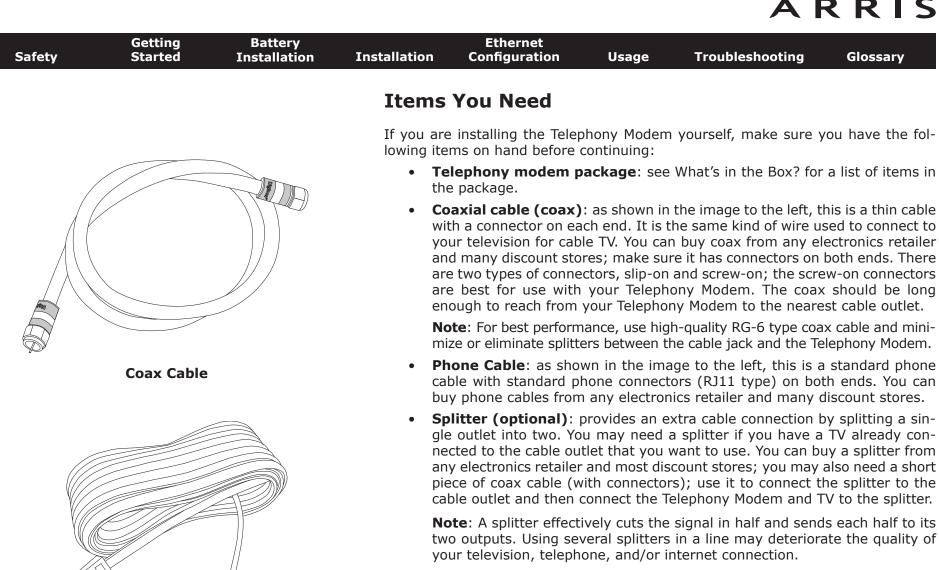

As indicated by this symbol, disposal of this product is governed by Directive 2002/96/EC of the European Parliament and of the Council on waste electrical and electronic equipment (WEEE). WEEE could potentially prove harmful to the environment; as such, upon disposal of the Telephony Modem the Directive requires that this product must not be disposed as unsorted municipal waste, but rather collected separately and disposed of in accordance with local WEEE ordinances.

This product complies with directive 2002/95/EC of the European Parliament and of the Council of 27 January 2003 on the restriction of the use of certain hazardous substances (RoHS) in electrical and electronic equipment.

|        |                    |                         | The Touchstone Telephony Modem operates with most computers. The follow describes requirements for each operating system; see the documentation for system for details on enabling and configuring networking. |                           |               |                     |                  |  |  |  |
|        |                    |                         | To use th  | e Telephony Modem         | n, you need D | OCSIS or Euro-DOCSI | S high-speed In- |  |  |  |

To use the Telephony Modem, you need DOCSIS or Euro-DOCSIS high-speed Internet service from your cable company, as appropriate. Telephone service requires that the cable company has PacketCable or Euro-PacketCable support.

#### **Recommended Hardware**

The following hardware configuration is recommended. Computers not meeting this configuration can still work with the TM802, but may not be able to make maximum use of TM802 throughput.

- CPU: P4, 3GHz or faster
- RAM: 1GB or greater
- Hard drive: 7200 RPM or faster
- Ethernet: Gig-E (1000BaseT)

#### Windows

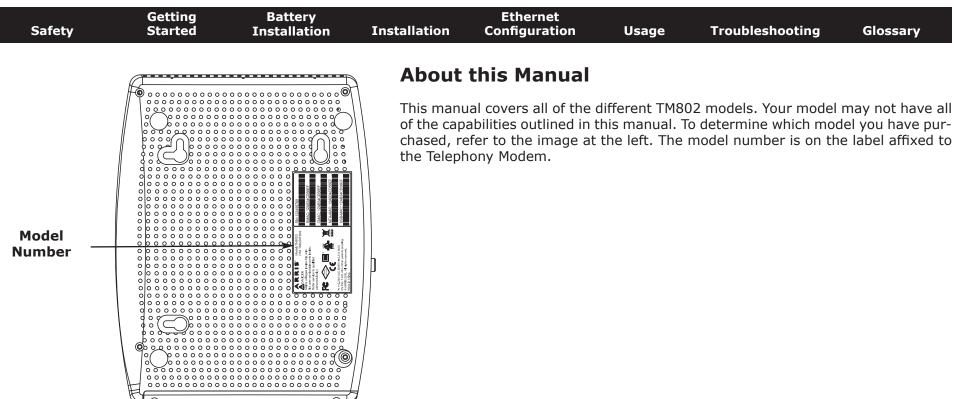

Ethernet connection: Windows 2000, Windows XP, Windows Vista, or Windows 7

#### MacOS

Ethernet connection only: System 7.5 to MacOS 9.2 (Open Transport recommended) or MacOS  $\rm X$ 

#### Linux/other Unix

Ethernet connection only: Hardware drivers, TCP/IP, and DHCP must be enabled in the kernel

#### **Ethernet Connection**

Ethernet is a standard method of connecting two or more devices into a Local Area Network (LAN). Use the Ethernet connection if your computer has built-in Ethernet hardware or you want to share the Telephony Modem connection with several computers. Arris recommends using an Ethernet connection.

**Note**: To connect two or more computers to the Ethernet port, you will need a hub or broadband router (available at computer retailers).

The Telephony Modem package comes with a 6-foot (1.9m) Ethernet cable (the connectors look like wide telephone connectors); you can purchase more cables if necessary at a computer retailer. If you are connecting the Telephony Modem directly to a computer, or to an Ethernet hub or broadband router with a cross-over switch, ask for Category 5e (CAT5e) straight-through cable. CAT5e cable is required for gigabit Ethernet (Gig-E), not regular CAT5 cable.

**Ethernet Cable**

- Use the cable company's mail servers for sending email.
- Avoid using proxy software unless you are certain that it is not open for abuse by other Internet users (some are shipped open by default). Criminals can take advantage of open proxies to hide their identity when breaking into other computers or sending spam. If you have an open proxy, your cable company may suspend your account to protect the rest of the network.
- If you connect your Telephony Modem to a wireless LAN, make sure you enable security and encryption on the wireless hub (for the same reasons that you should run only secured proxies). Consult the documentation and technical support of the wireless equipment provider for help.

**Basic Backup Battery** 

**Extended Backup Battery** 

**Maximum Backup Battery** 

# Battery Installation and Replacement (TM802G Only)

The TM802G Telephony Modem may optionally include a Lithium-Ion battery to provide backup in the event of a local power loss. The battery backup is not intended to take the place of AC power.

**Note:** For safety and regulatory purposes, batteries are shipped outside of the Telephony Modem and must be installed.

The TM802G supports the following battery models:

• **Basic backup battery** — provides up to 6 hours (black) or 8 hours (green) of backup time, depending on your Telephony Modem model and usage. It may be green or black.

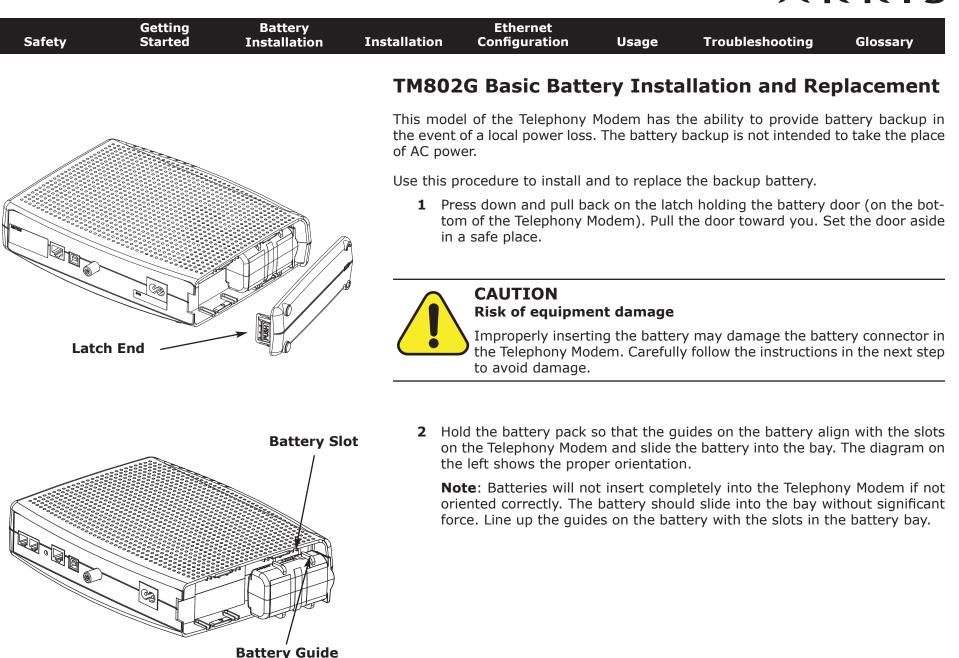

**Basic Battery Installation and Replacement** 

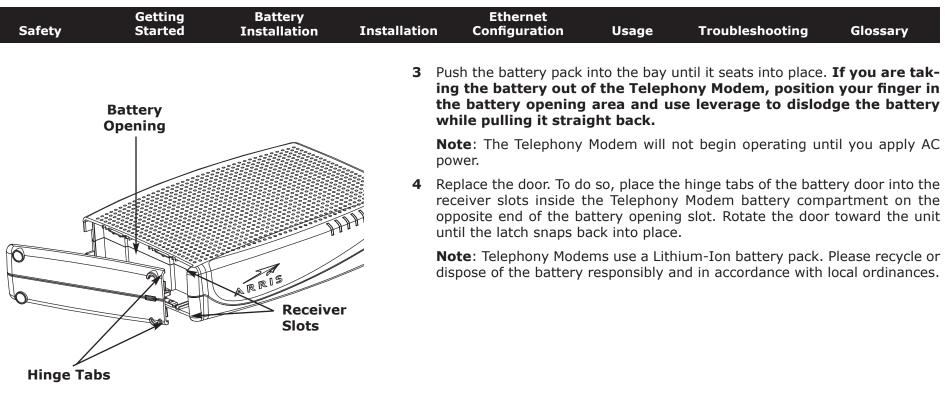

• **Extended backup battery** — provides up to 12 hours of backup time, depending on model and usage. It has a strap between the battery guides. It may be light grey or black.

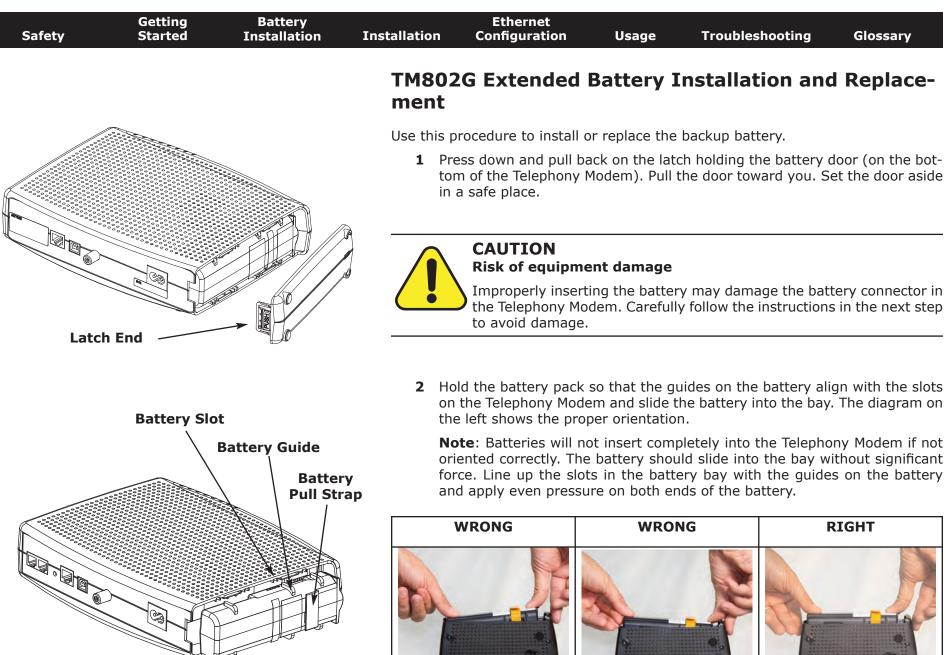

Extended Battery Installation and Replacement

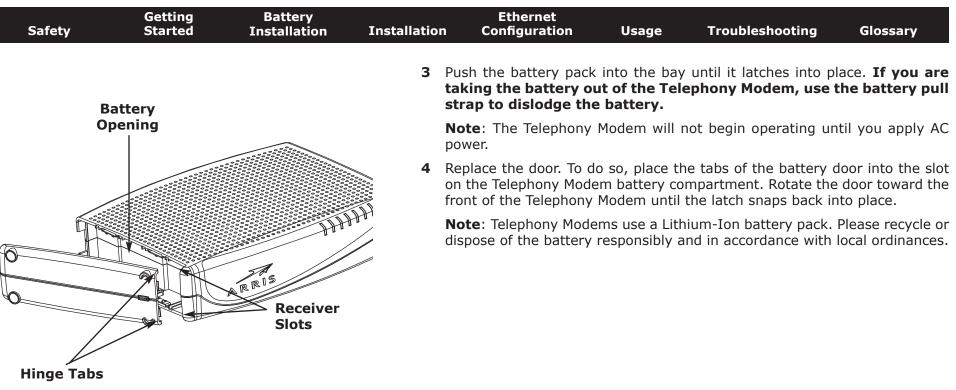

• **Maximum backup battery** — provides up to 18 hours (6-cell) or 24 hours (8-cell) of backup time, depending on model and usage. It replaces the battery door, and increases the height of the Telephony Modem by about 5/8 inch (16 mm).

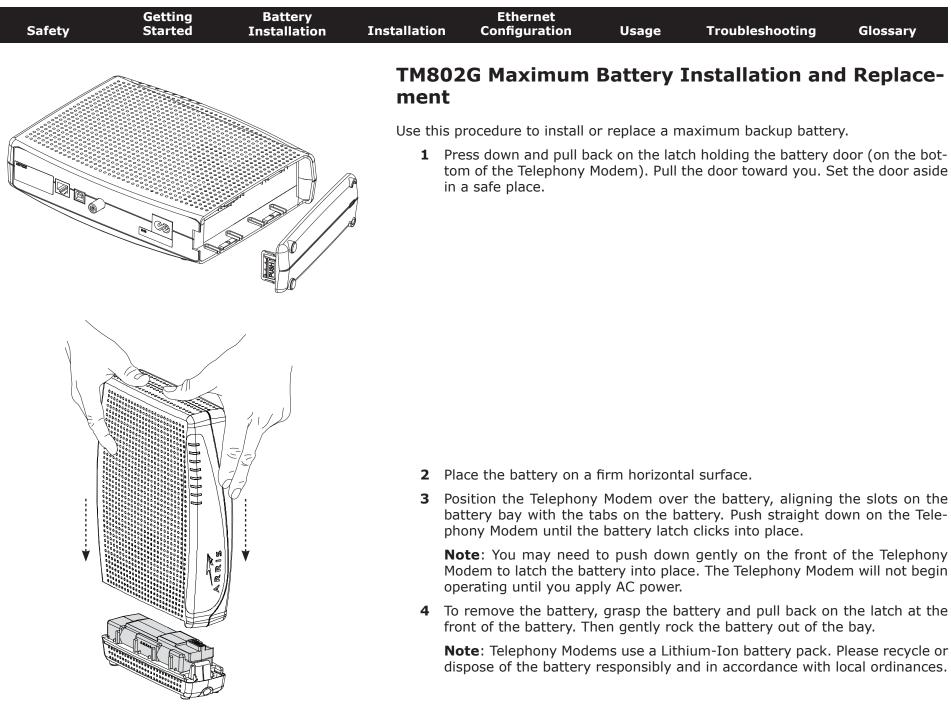

Maximum Battery Installation and Replacement

#### **Installing and Connecting Your Telephony Modem**

Before you start, make sure that:

- You have contacted your cable company and verified that they provide data and telephone service using standard DOCSIS technology.
- You have all the <u>Items You Need</u>.
- Cable, phone, and power outlets are available near the computer. If a cable outlet is not conveniently located, your cable company can install a new one.

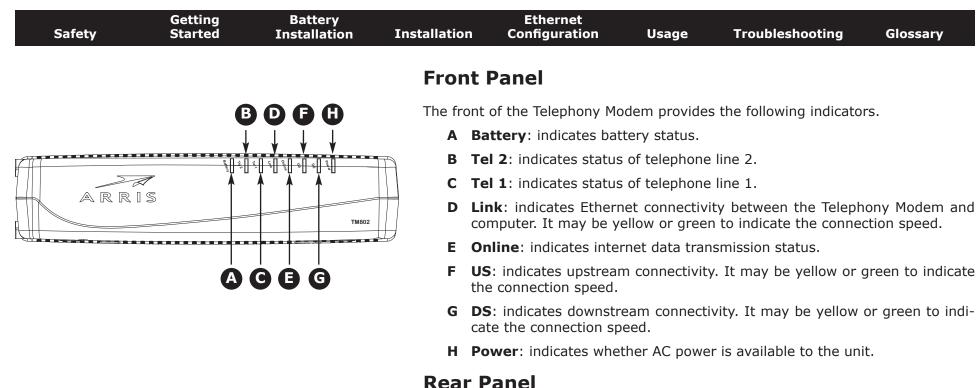

If you have ordered service, your cable company should configure the Telephony Modem automatically. You need only follow the instructions in this section to install and connect the Telephony Modem.

#### CAUTION

#### **Risk of equipment damage**

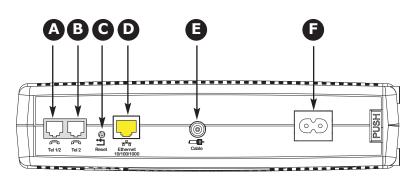

Only qualified installation technicians should connect the Telephony Modem to house wiring. Incumbent telephone service must be physically disconnected at the outside interface box before making any connections.

The rear of the Telephony Modem has the following connectors and controls:

- **A Tel 1/2** (grey): connector for the first phone line (or both lines of a 2-line phone).
- **B Tel 2** (grey): connector for the second phone line.
- **C Reset** button: resets the Telephony Modem as if you power cycled the unit. Use a pointed **non-metallic** object to press this button.
- **D <u>Ethernet</u> connector (yellow): for use with a computer or home network LAN connection.**
- **E Cable**: connector for the <u>coax cable</u>.
- **F Power**: connector for the power cord.

#### Location

Always position the Telephony Modem:

- within reach of an AC outlet. The power cord must reach the outlet without stretching and without adding extension cords.
- near a cable outlet (to avoid long cable runs).

Batterv

contacts the screw shaft. 5 Proceed to <u>Connecting the Telephony Modem</u>.

#### **Desktop mounting instructions**

Ethernet

- **1** Position the Telephony Modem so that:
  - air flows freely around it
  - the back faces the nearest wall ٠
  - it will not fall to the floor if bumped or moved ٠
  - the ventilation holes on the side of the unit are not blocked
- 2 Proceed to Connecting the Telephony Modem.

#### **Making Ethernet Connections**

**3** Connect one end of the yellow Ethernet cable to the yellow port on the back of the Telephony Modem labeled "Ethernet 10/100/1000," (**D**) and the other end to the Ethernet port on a computer, hub, or broadband router.

**Note**: If you are connecting to a computer, use the Ethernet cable included in the Telephony Modem package.

#### **Making Telephone Connections**

**4** Connect one end of the telephone cable to one of the grey telephone ports on the back of the Telephony Modem (**A** or **B**). Connect the other end to the telephone.

**Note:** If you have a phone with two separate lines on a single RJ-14 cord, plug it into the port labeled "Tel 1/2".

|--------|--------------------|-------------------------|--------------|---------------------------|-------|-----------------|----------|
|        |                    |                         |              |                           |       |                 |          |

#### **Configuring Your Ethernet Connection**

If your computer is equipped with a LAN card providing an Ethernet connection, you may have to configure your computer's TCP/IP settings. The steps that follow will guide you through setting your computer's TCP/IP settings to work with the Telephony Modem.

#### Requirements

Make sure you have the following before attempting to configure your Ethernet connection:

- Computer with:
  - $-\,$  one of: Windows 2000, Windows XP, Windows Vista, Windows 7, or MacOS X
  - Ethernet interface
- Ethernet cable (supplied)
- IP address, subnet, gateway, and DNS information for installations not using DHCP

#### How to use this chapter

The following list shows the procedures for modifying the TCP/IP settings on the computer. The procedure is slightly different depending on the operating system that you are using. Please ensure you are using the correct steps for the operating system on your computer. Follow the links below for instructions to configure your Ethernet connection on your operating system.

- <u>TCP/IP Configuration for Windows 2000</u>
- TCP/IP Configuration for Windows XP
- <u>TCP/IP Configuration for Windows Vista</u>
- TCP/IP Configuration for Windows 7
- <u>TCP/IP Configuration for MacOS X</u>

|               | Confi     | gure I | Pv6)          |              |              | 1        |

**4** Choose the TCP/IP tab, if necessary.

If you are using **TCP/IPv4**, go to **step 5**. If your cable provider requires **TCP/IPv6**, go to **step 8**.

- **5** Choose **Using DHCP** from the Configure IPv4 menu.
- 6 If necessary, click the **Renew DHCP Lease** button.
- 7 Close the System Properties application.

TCP/IPv4 configuration is completed.

# Setting up Your Computer to Use the Telephony Modem

Follow the instructions in the information packet supplied by your cable company. Contact your cable company if you need help setting up your computer.

#### **Wiring Problems**

If the Telephony Modem begins flashing all its lights for more than 10 seconds, this indicates a problem with the telephone wiring—the red and green wires may be shorted (touching), or there may be undesired voltage on the lines. If this pattern persists for more than 10 seconds, disconnect the telephone lines from the Telephony Modem, then call a wiring technician for assistance.

#### **Indicator Lights: Startup Sequence**

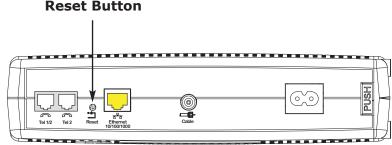

The following table shows the Telephony Modem light patterns during each phase of the startup sequence. There are two phases of startup; the Telephony phase and the cable modem phase. Both are outlined below.

#### **Telephony Modem Start Up Sequence**

| Power, DS,                                  | Telep                   | hone  | Description                                   |  |  |  |  |  |  |
|---|-------------------------|-------|---|--|--|--|--|--|--|
| US, Online                                  | 1                       | 2     | Beschption                                    |  |  |  |  |  |  |
| Off   | Off                     | Off   | No power to Cable Modem                       |  |  |  |  |  |  |
| Flash                                       | Flash                   | Flash | Power-on Self Test                            |  |  |  |  |  |  |
| "Cable Modem Start Up Sequence" Begins      |                         |       |   |  |  |  |  |  |  |
| On  | Flash                   | Off   | Retrieving telephone network in-<br>formation |  |  |  |  |  |  |
| On  | Off                     | Flash | Retrieving telephone line informa-<br>tion    |  |  |  |  |  |  |
| On Flash Flash Activating telephone service |                         |       |   |  |  |  |  |  |  |
|   | Normal Operation Begins |       |   |  |  |  |  |  |  |

**Note:** The **DS** and **US** indicators flash yellow during startup, and turn green if the Telephony Modem establishes an ultra-high speed connection. For some cable companies these colors may be reversed. The **Link** indicator may be yellow or green, as determined by the table on the previous page.

### **Using the Reset Button**

Use the **Reset** button, on the back of the Telephony Modem, to reset the modem as if you power cycled the unit. You may need to reset the Telephony Modem if you are having problems connecting to the Internet. Using this button will be rare.

Use a pointed **non-metallic** object to press this button. The photo to the left shows the location of the **Reset** button. The **Reset** button is recessed to prevent accidental resets.

### **Booting from Battery**

The TM802 supports a "Boot from Battery" feature that allows the Telephony Modem to begin service without AC power.

To start the TM802 from its battery, follow these steps:

- **1** If a battery is already installed in the Telephony Modem, remove it.
- **2** Re-insert the battery into the Telephony Modem (see <u>Battery Installation</u> <u>and Replacement (TM802G Only)</u> for details).
- **3** Press the **Reset** button; the Power light should turn on immediately.
