

Hello Everyone,

I am writing to announce that my second book has been published!

Over the past five years, I have been on an amazing journey guided by secondary education and professional certifications. I started my training in healthcare, then moved to business leadership, and landed in technology. Along the way, I was exposed to different types of people, bodies of knowledge, and passions.

I'm sure it is not new to anyone that the world is continuously changing. There are new social normalcies, incoming generations, and new ways of obtaining information. It is my hope that this book will inspire enthusiasm and passion for the pursuit of knowledge.

"We're just getting started on our goal of connecting everyone." That's the goal of Facebook's founder, Mark Zuckerberg. I share that vision. Information should not be something that only privileged students have access to. It should be provided to everyone.

I am worried about the millions of growing children that do not have access to information. I fear for the dying arts and bodies of knowledge. That is why I am seeking to inspire the next generation to utilize the vast bodies of information that are available at their fingertips and experience the positive impact it can have on their life.

Critics may say that information comes and goes over time, and this is true; however, whatever the duration of availability, whatever the size, a piece of information can have extreme importance and the potential to cause a movement.

"The facts of the present won't sit still for a portrait. They are constantly vibrating, full of clutter, and confusion." – William Macneile Dixon, Professor of Literature

My goal is to paint an unbiased, millennial view of the current world in which we live. There are so many complexities and corners in the fields of Healthcare, Technology, and Business that need to be captured in the literature - all in one place, all in one source.

The Healthcare section applies traditional and contemporary leadership methods to pharmacy practices in retail and institutional settings, explores the collusion of large pharmaceutical companies, and purposeful solutions to the currently flawed healthcare system in America. The Technology section reviews innovation of the day such as artificial intelligence, cognitive science, internet of things, and privacy. The Business section transitions technology innovation into the realm of business.

This book is really two books in one: a book that provides information relevant to the time, and a book that synthesizes and applies the information to the future. The provision of the information provides a framework, and the application provides practical examples for the future.

With information, comes power. We all have a role in the world we live in. Hopefully, upon the exit of my generation, we will have left the world a better place than when we found it. Decades from now, I hope that the generation of the time will look back at my generation and appreciate the progress that has been made and the positive, accepting, and sustainable environment that exists.

The easiest way to get a copy of my second book is through my website www.justindecleene.com. I also offer a bundle deal if both of my books are purchased together on my website. Both of my books are also available on Amazon.

Happy Learning!

Justin DeCleene MBA, MIS, PBM-CT, CPhT
