

VIGION

Laparoscopic Universal Smoke Evacuator

Experience enhanced surgical clarity with VIGION — providing superior vision and efficient smoke evacuation throughout the entire procedure. Designed for use with both standard electrosurgical and high-energy devices.

Immediate evacuation from the proximal end

Instant smoke removal from the rear-end of electrode.

No additional machine needed

Connected to the essential suction machine in the operating room, without additional unit.

One-finger intensity control

The innovative design is protected by domestic and international patents. Effortless control with just one finger.

Compatible with all energy devices

Instantly converting a standard ESU into one with smoke evacuation capabilities.

Watch  introduction

Revolutionize Your Surgical Environment with VIGION Technology

VIGION Technology is dedicated to transforming the surgical experience in minimally invasive procedures. Inadequate visibility from surgical smoke can lead to interruptions, especially during bleeding, increasing risks and impact on patient outcomes.

Our Solution: Proximal Smoke Evacuation

By positioning the exhaust point at the front of the electrocautery device, VIGION instantly removes smoke at the source, reducing smoke density by 86%, improving image clarity, and purifying 99% of carcinogenic volatile organic compounds (VOCs).
