Best American Beauties Native Plants® for NATIVE BIRDS

NATIVE PLANTS.

Make your garden come alive!

Best American Beauties Native Plants® for NATIVE BIRDS

Native plants are essential if native birds are to survive and thrive. Native plants have evolved with native birds and provide (3) vital elements that non-native plants can't.

- Caterpillars (C) Essential live food for rearing of young
- Fruit & Seed (FS) Essential food when live food sources are not available
- Cover (CV) Essential predator protection and nesting sites to raise young

Best American Beauties Native Plants® for NATIVE BEES

Make your garden come alive!

Best American Beauties Native Plants® for NATIVE BEES

Native plants are essential if native bees are to survive and thrive. Native plants, including trees (T), shrubs (S) and perennials (P) have evolved with native bees and are better than non-native plants at providing the nutritional support in the form of nectar needed to sustain the native bee life cycle. Native bees are essential pollinators that, along with other pollinators, are responsible for one third of the world's food supply.

Make your garden come alive!

Best American Beauties Native Plants® for NATIVE BUTTERFLIES

Native plants are essential if native butterflies are to survive and thrive.

Native plants, including trees (T), shrubs (S) and perennials (P) have evolved with native butterflies and are better than non-native plants at providing vital nutrition and protection to sustain the native butterfly life cycle. In fact, without many of the plants listed, certain species of butterflies would cease to exist!

Native butterflies add beauty to the home landscape and, along with native bees and other pollinators, are responsible for one third of the world's food supply.
