* The Leap Day (Sep 30, Sunday) can be the World Astronomy Day														Leap Year Double Sunday ↗ = Sep 30 (Leap Day) + Oct 1							Annual Double Sunday ↗ = Dec 31 + Jan 1											

The World Enduring Calendar (**WEcalendar**) concisely combines the first 9 months of 2012 with the last 3 months of 2017, and then... let it repeat annually...

All quarters of the year always begin on **Sunday** with exact 13 weeks in 3 months.

Both the New Year's Day and the New Year's Eve are always on **Sunday** .

* It overcomes the drawbacks of the redundant annual calendar renewal.

* It is the most practical civil calendar for governments and any business.

* It is the simplest and most considerate calendar for all strata of society.
