

Monitoring Global Supply Chains

How Jambo anticipates, detects, and converts global disruptions into actionable intelligence.

Meet Jambo

Your Product Intelligence Assistant

Ask questions grounded in your own product data.

Understand products, suppliers, risks, compliance and carbon.

Turn product intelligence into better business decisions.

© 360platform

What Can You Ask Jambo?

Examples

Which suppliers expose this product to geopolitical risk?

Is this product compliant with ESPR or CBAM?

What documentation is missing?

Which materials drive carbon emissions?

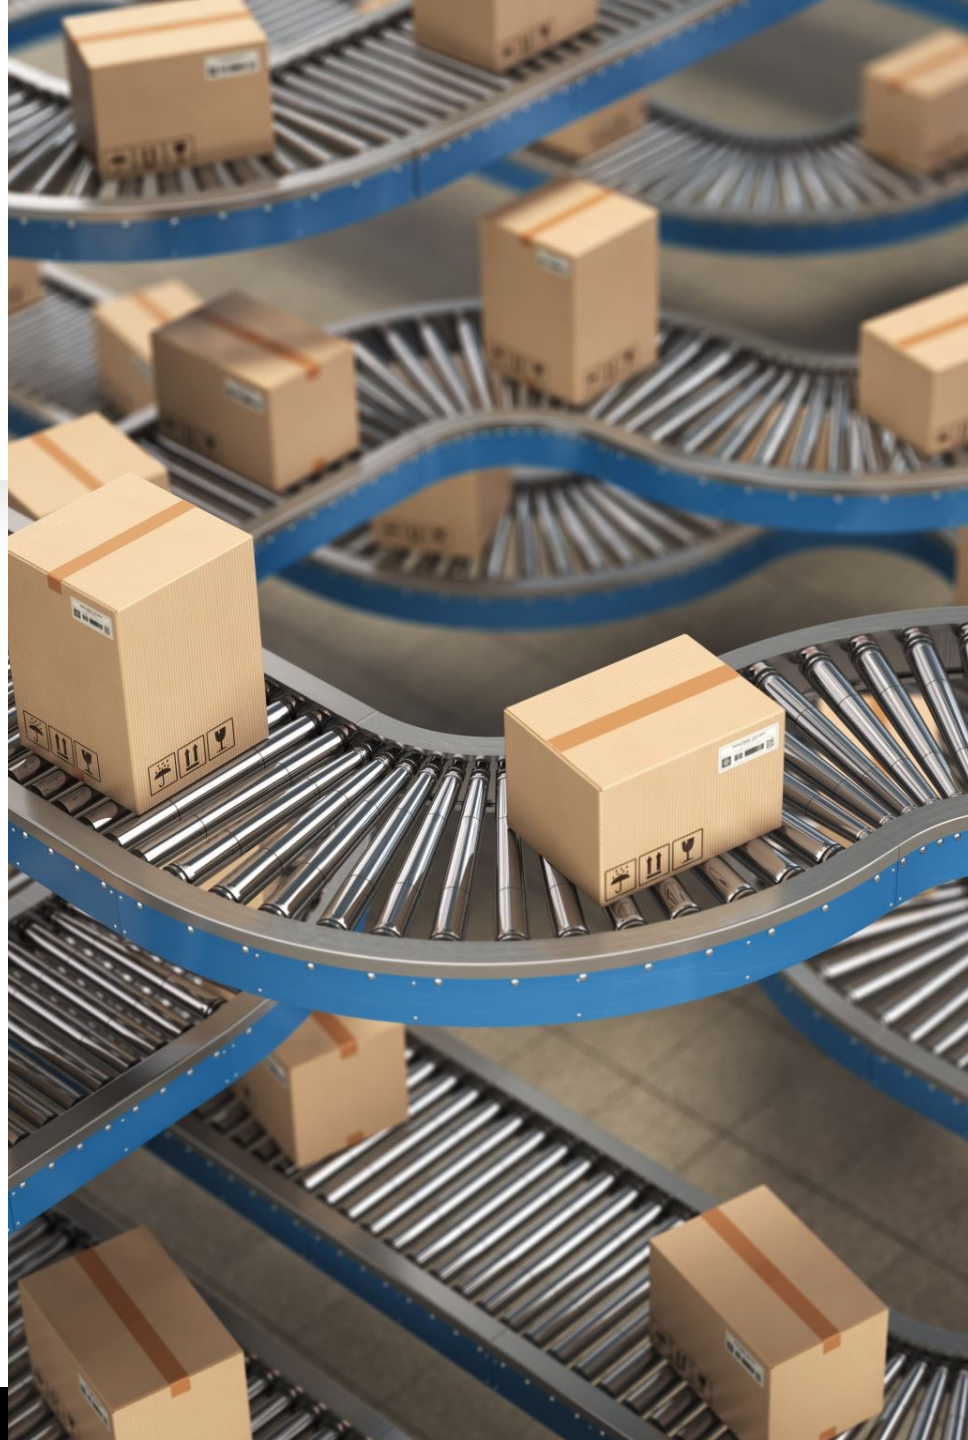

Which alternative suppliers reduce cost and risk?

© 360platform

Why Product Intelligence Matters

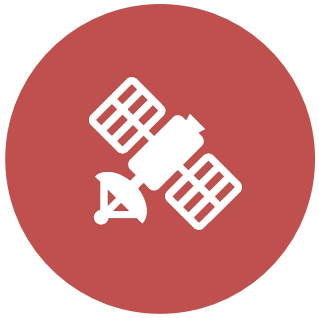

Beyond Traditional Systems

- ERPs manage transactions.
- PLMs manage engineering data.
- Jambo understands the product and its entire supply chain.

© 360platform

Three Intelligence Capabilities

SENTINEL — DETECTS GLOBAL EVENTS

ANALYST — EXPLAINS IMPACTS & RECOMMENDS ACTIONS

VISIONARY — MODELS FUTURE SCENARIOS (30–180 DAYS IMPACTS)

© 360platform

Sentinel

From Global Events to Product Impacts

Monitors geopolitical, environmental, cyber and regulatory events.

Correlates events with suppliers, materials and logistics.

Provides early warnings.

© 360platform

Analyst

Decision Intelligence

Prioritizes affected products.

Scores risks.

Recommends mitigation actions and alternative sourcing.

© 360platform

Visionary

Scenario Planning

Models stabilization, escalation and prolongation scenarios.

Forecasts delays, costs and supply risks.

What Jambo Is Not

Not a black-box or generative AI system
Not a news aggregator or generic alerting feed
Not dependent on U.S. or ITAR-sensitive infrastructure
Not a replacement for analysts — but an intelligence amplifier

© 360platform

Why Jambo Is Not a Generative AI System

Deterministic analytics — not language prediction

Jambo processes structured geopolitical, supplier, and material datasets. It does not generate text or probabilistic content.

Fully explainable and auditable

Every risk score, correlation, and prediction is traceable back to real data sources and transparent algorithms.

No hallucinations, no uncontrolled outputs

Jambo does not infer or “imagine” anything. It computes validated outcomes using rule-based and statistical models.

ITAR-free, sovereign, non-LLM architecture

No foreign inference servers, no LLM dependencies, and all processing occurs in secure environments.

© 360platform

Trust & Sovereignty

Explainable analytics

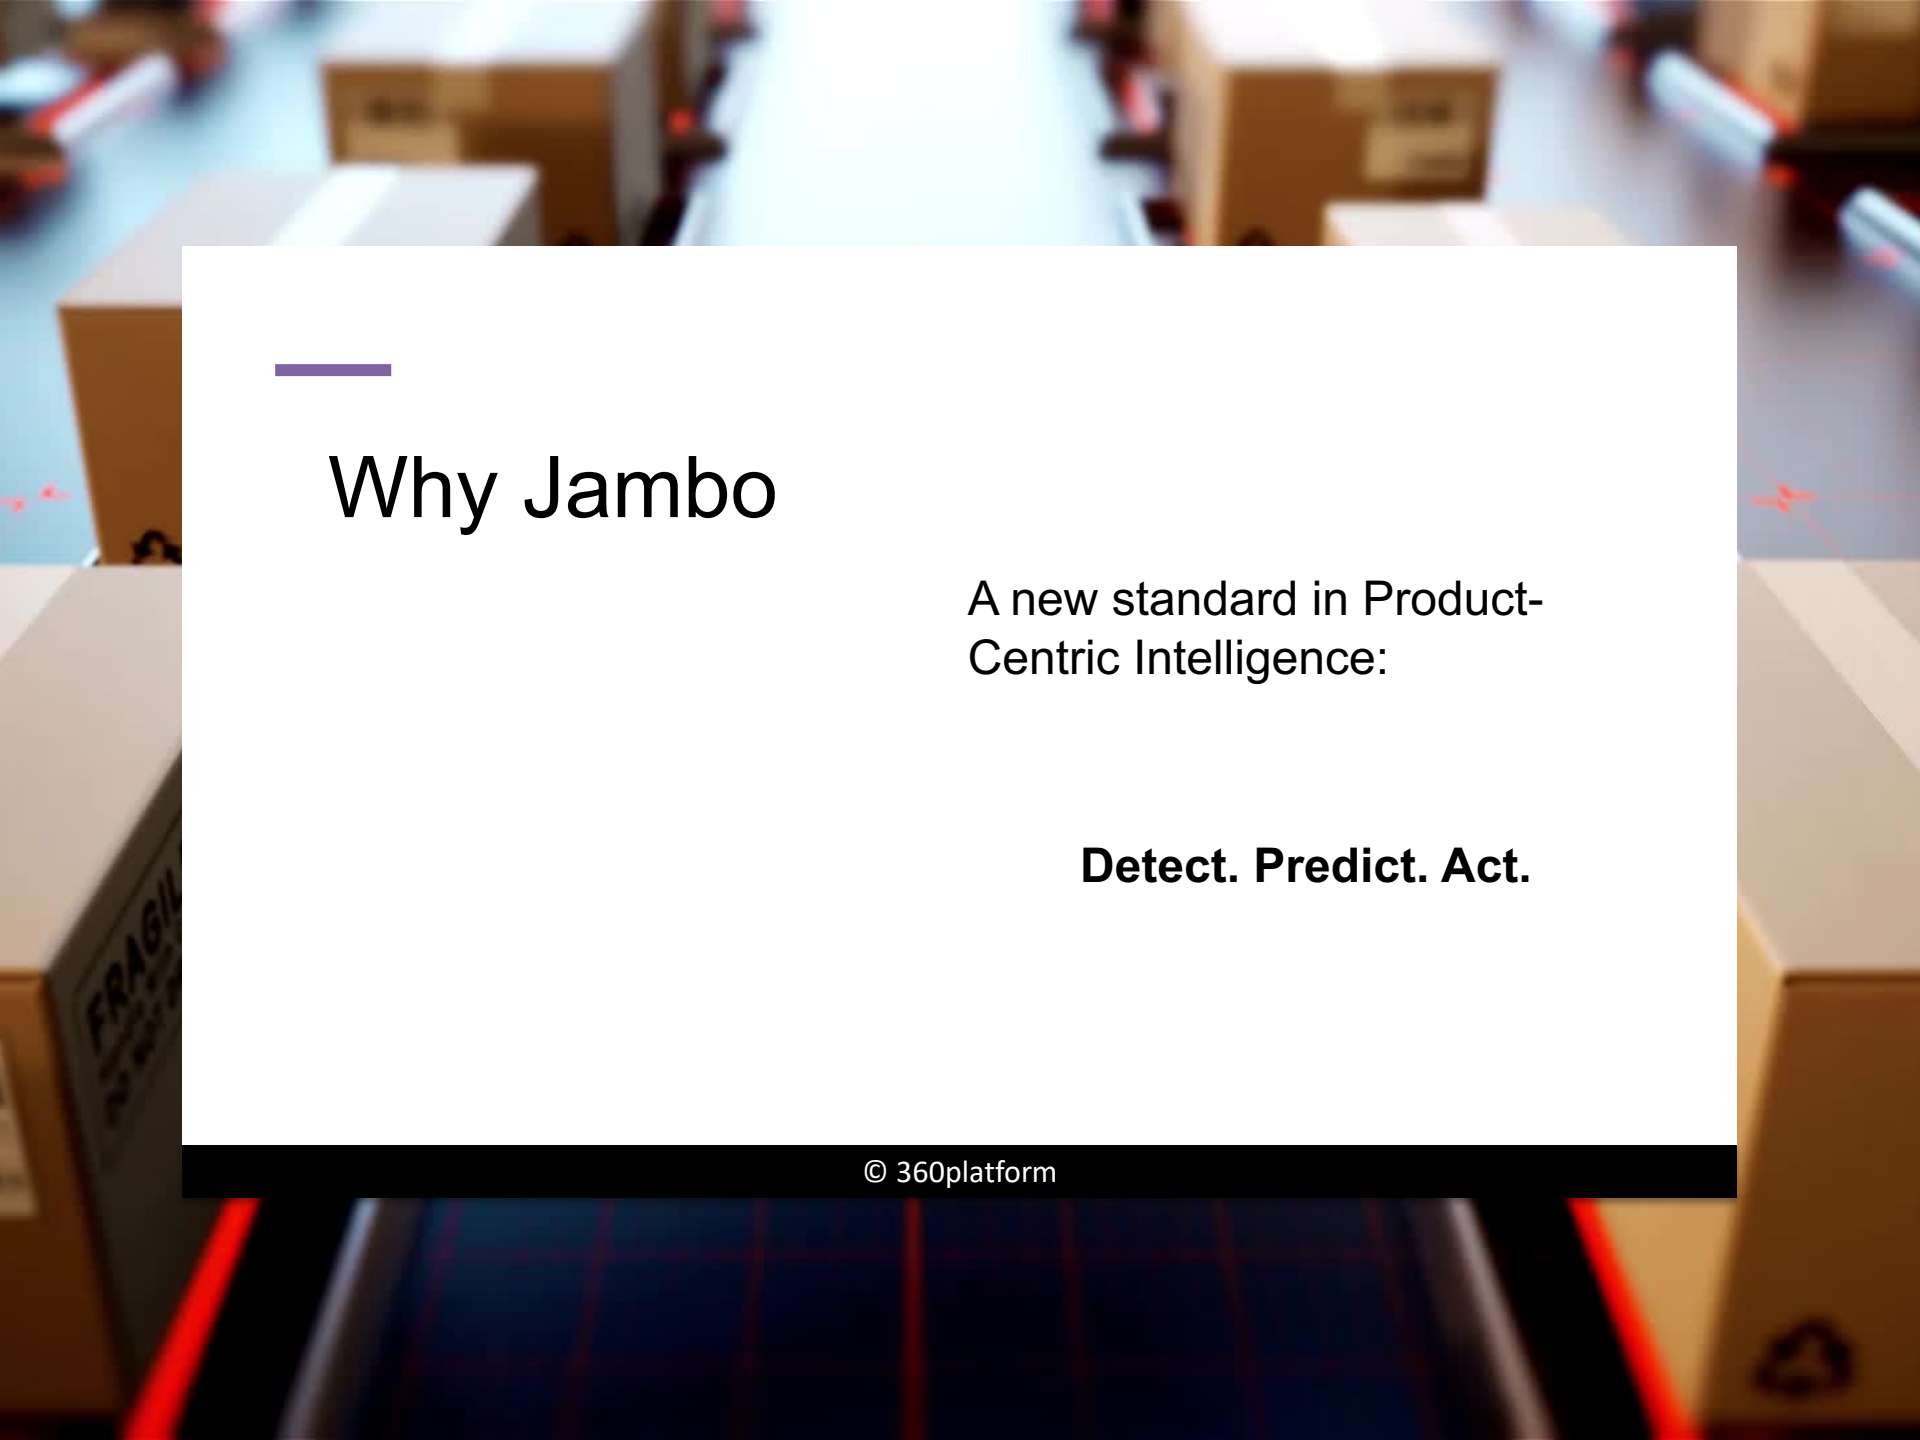

Customer-selectable data residency

Customer-owned encryption keys

Transparent processing

Enterprise Ready

© 360platform

Why Jambo

A new standard in Product-Centric Intelligence:

Detect. Predict. Act.
