

# CULVERT INFORMATION

**As you are aware, the Hamlet has annual spring drainage and is in a potential flood zone. The culverts within the Hamlet are a crucial part of drainage and water flow. It is very important to keep them clear of rock and debris.**

We appreciate the beautiful designs homeowners have shown; however, it's very important to keep the bottoms of the culverts clear of rocks or any other debris.

Having rocks and debris at the bottom of the culverts can prevent the speed of water flow or restrict flow completely.

Should you see any blockages in the culverts, please call the office at 306-232-4393 to have this addressed.

If your culvert has any debris or rocks blocking, we kindly ask you have them removed.

**WE APPRECIATE YOUR ASSISTANCE IN KEEPING THE DRAINAGE PATH CLEAR.**
