ULA INTERNSHIPS

ULA's summer intern program offers paid engineering and business positions designed to provide students with real-world work experience and exposure to life at the nation's premier space launch company. Interns are encouraged to generate and share new ideas while delivering work products that impact ULA's missions, methodologies and processes. Interns are evaluated for potential employment opportunities with ULA after graduation.

INTERN ROCKET PROGRAM

LAUNCH JULY 20, 2024

Summer interns at many ULA sites have the option to design, build, refurbish and launch sport rockets. The tradition began in Colorado and branched out to interns across the company supporting multi-year rocket projects. Now, volunteer interns and mentors build rockets at their own sites – a hands-on opportunity to work with hardware and get to know more experienced industry professionals. Interns of all backgrounds, experience levels and job function can participate – mentors work with everyone to create safe, hands-on experiences for everyone.
