

Award for Carbon Credits Issued to GEC Organics Corp. by Gold Standard Foundation, Geneva Switzerland

8 March, 2017 – GEC Organics Corp., (“GECO”) is pleased to announce that after much effort over many months, it has been approved by The Gold Standard Foundation, Geneva Switzerland for the issuance of Carbon Credits. These emission reduction credits have been awarded to GECO through the production of its USDA Certified Organic Compost at its Castleberry, Alabama location.

The Company has undergone a rigorous process to obtain a ten year validation from the Gold Standard which is the most highly regarded carbon registry in the world. Additional credits are granted automatically as raw material is processed by GECO. The sale of these Carbon Credits will provide GECO with an additional revenue stream to complement the sale of its all-natural soil amendment, O.N.E™ (“Organic New Earth”).

GECO is the only compost production project approved by the Gold Standard worldwide and is now doing its part to ensure a clean environment through the reduction of Greenhouse Gas (“GHG”) emissions. Several Carbon Brokerage Firms worldwide have expressed interest in the purchase of these VERs (“Verified Emission Reduction”) Credits for their clients now and in the future.

About GEC Organics

GEC Organics is an organization dedicated to restoring soil for a sustainable environment. Established in 2011, the company has developed a 70 acre site in Southern Alabama for the creation of an all-natural soil amendment. The company's products include O.N.E™, a "high potency" and nutritious soil amendment with the capacity to restore any soil and make it a balanced growing medium.
