

About PICOFocus

PICOFocus effectively targets and breaks down a range of skin pigments, including freckles, age spots, and hyperpigmentation.

PICOFocus can effectively target these pigments by emitting light at a specific wavelength. The energy from the laser turns the pigments into tiny particles that is eliminated through the body's natural process. As a result the pigments and skin become lighter.

PICOFocus targets and breakdowns pigments without damaging the skin.

Minimized Risk and Minimized Discomfort

The ultra-short pulses also optimize the delivery of energy directly to the target with least amount of heat transfer into the skin, you'll feel minimal discomfort throughout the procedure.

Introducing PICOFocus

**BEAUTY AND
BODY BY FLORA**
state-of-the-art laser
technology to treat
brown spots, fine lines,
wrinkles, and sun
damage, along with
stimulating collagen and
elastin production.

PICOFOCUS USE

PIGMENTATION and MELASMA

Pico laser can target and break down problem skin pigment or particles, which are then eliminated naturally by the body.

This can help improve skin tone and texture, and reduce the appearance of melasma.

ACNE SCARRING

PICOFocus can break down acne scars. Used on all types of acne scars, including ice pick and rolling scars. Quick, painless, and effective treatment for aggressive acne and acne scarring.

TATTOO REMOVAL

Latest and most effective innovation in tattoo removal. Pico laser can break down tattoo pigments and often show results immediately. Complete removal achieved in as little as 8-12 sessions.

WRINKLES

Laser technology replaces damaged tissue with new collagen and elastin to improve the appearance of wrinkles and other signs of aging.

TATTOO REMOVAL

Effective shattering of most pigment/ink colors, on the widest range of skin types. Its four wavelengths - 1064nm, 532nm, 650nm and 585nm - target 9 of the most frequently used tattoo colors ranging from light orange to dark black.

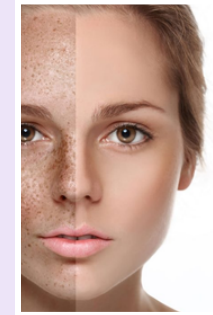

TREAT ACNE SCARS, PIGMENTATION AND WRINKLES

PICOFOCUS features a focus array lens indicated for the treatment of acne scars and wrinkles, also could improve skin texture as rejuvenation. The treatment could stimulate the production of new collagen and elastic fibers, which result in reducing fine lines and pores size, increasing skin elasticity and improving skin condition.
