RSVP BELOW BY JULY 22ND

After RSVP date, preregistration
& parking information will be sent

FIRE ALARM CONTROL PANEL 101

Receive a foundational understanding of how fire alarm systems operate and how to navigate a fire alarm control panel (FACP). Participants will learn to identify common panel components, interpret alarm, supervisory, and trouble conditions, review event histories, understand system annunciation, and recognize the role of initiating and notification devices. The class equips Fire Marshals & Inspectors with the knowledge needed to efficiently assess system status, support inspections and investigations, and coordinate effectively with building personnel and fire alarm service providers.
