

PA 100

Design Guide

PA 100

PA 100 was developed according to the principles of modern partitioning. Its versatile structure allows for a wide range of finishings for the opaque version, as well as several modulation schemes, making it a perfect solution for dynamic spaces.

PA 100 follows our principles of versatility, that we feel every partition should have, in order to fit the most unique project. Thus, the acoustic performance of our PA 100 Partition, can be worked in order to fit the most demanding projects.

PA 100
Design Guide

PA 100 GLASS

TYPE

Modular demountable partition, composed of double independent panels, allowing access points throughout all its length. Total thickness of 108 mm

STRUCTURE

Freestanding, composed of vertical and horizontal elements in anodized or lacquered aluminium.

FLOOR AND CEILING VIEW

Floor and ceiling track, in aluminium with a view of 30mm.

PA 100
Design Guide

PA 100 - OPAQUE

MODULES

19mm melamine panels with various finishes (natural wood veneer, HPL, Magnetic and Melamine) with a 1 or 2mm PVC edge banding. Acoustic insulation through 60mm mineral rock wool with a density of 70 kg/m³.

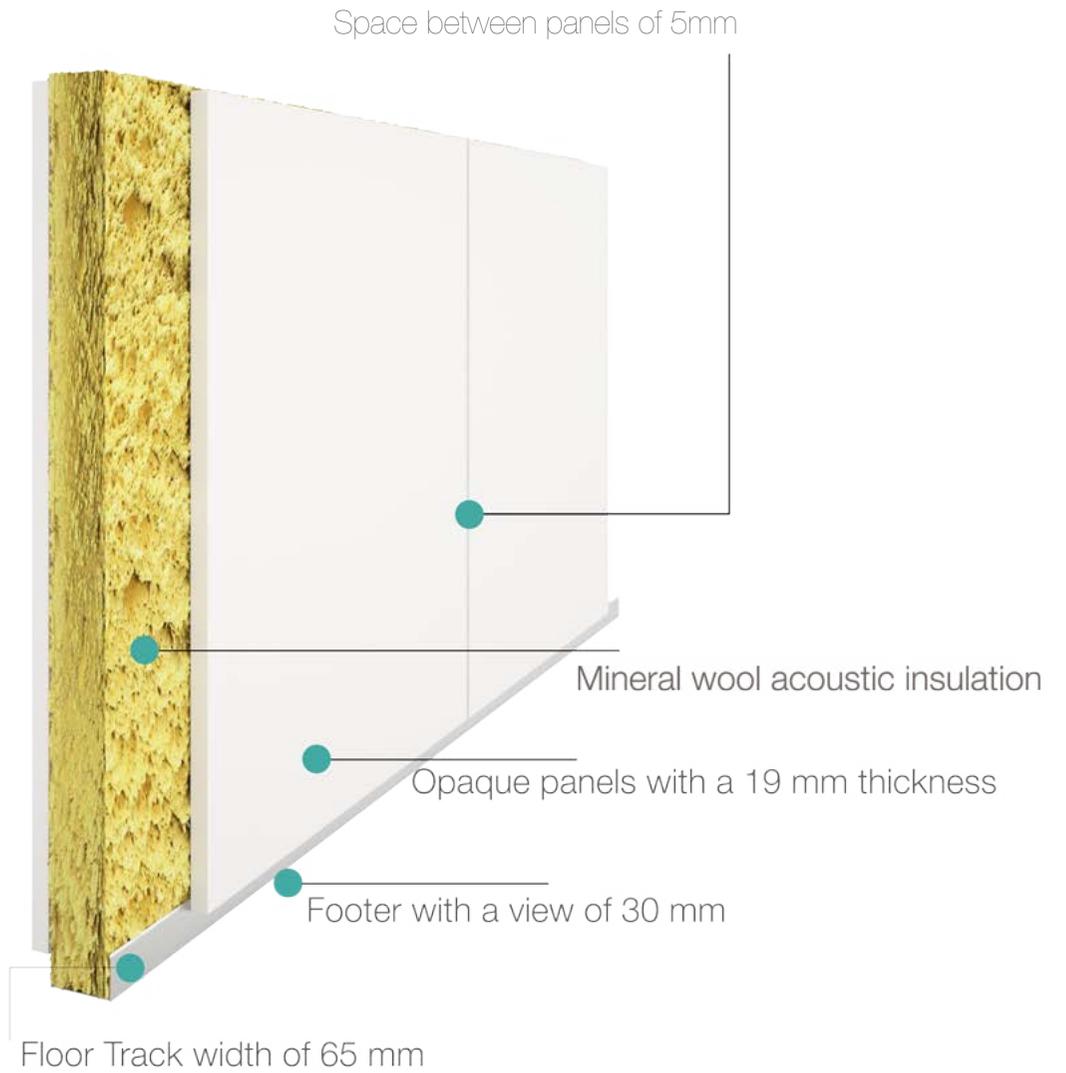

The panels are placed through Line Systems clip and fix system (keeping a hidden structure), allowing for an easy and quick installation and the creation of access panels. Space between panels of 3 to 5 mm.

PA 100 - OPAQUE

ACOUSTIQUE INSULATION

Certified by the Portuguese National Engineering Laboratory, with an acoustic insulation of 46 to 53 dB Rw

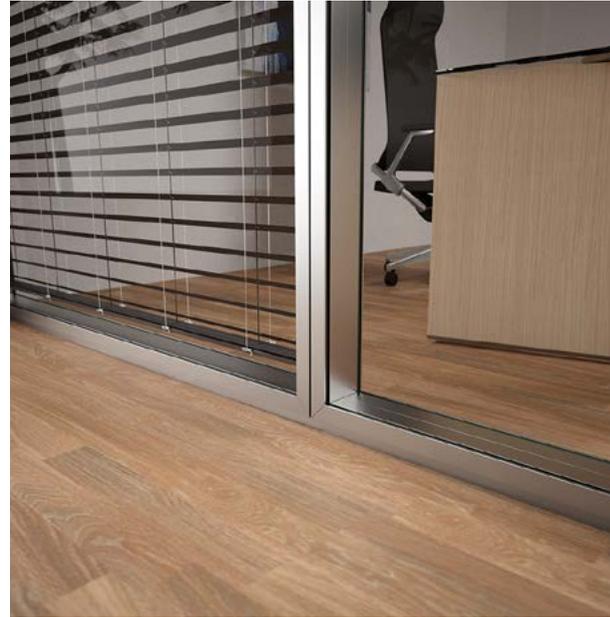

PA 100
Design Guide

PA 100 - GLASS

MODULES

Double glazed framed modules, with glasses of 6mm with an interior space between glasses of 80mm, allowing the incorporation of blinds.
