Construction

Effectively manage projects with software designed specifically for the construction industry.

# Construction key challenges + what MYOB Acumatica delivers

## Modern, single source of truth available where it is needed

- Existing construction solutions are on premise and not able to deliver information when and where it is required.
- According to a report from the Australian Chief Economist, only 22.5% of construction companies are actively leverage all the benefits of cloud computing
- Acumatica Construction being fully cloud based and available on all devices provides relevant information where you need it, when you need it

## Construction is high value with associated high risk

- A high level of certification, insurances and other compliance related documentation needs to be maintained and kept current
- Through a combination of compliance tracking, notifications and dashboards, MYOB Acumatica Construction ensures that the right people are aware of any compliance related action items

## Management of variations can make the difference in project profitability

- Variations can occur for several reasons and can impact costs and project schedules. Delays in a project can result in penalties to the contractor.
- The combination of the various project management tools including the daily field report, project issues, RFI's, Change Requests and Change Orders with the relevant approval workflows provides the ability to track and manage the impact of project variations

# Construction key requirements + what MYOB Acumatica delivers

## Back-office

- High \$, high volume transactions
- High risk operations, if something goes wrong it has a big impact
- Generally multiple legal entities involved - bigger companies will spin up new entity for each project.

This brings challenges with:

- Consolidations
- Cash flow management
- Intercompany transactions
- Require input and feedback from numerous stakeholders
- Document approval from PM's & supervisors

## Field

Project managers

- Visibility over multiple projects
- Accurate tracking of costs and alerting of issues and payment claims
- Risk management tracking and mitigation and managing compliance
- Coordination of multiple project deadlines and requirements
- Site safety

Supervisors

- Tracking daily happenings onsite
- Employee management & site safety

Employees

- Site safety & time sheeting

## Stakeholders

Customers

- Visibility on progress
- Risks
- Cost and forecasts

Subcontractors

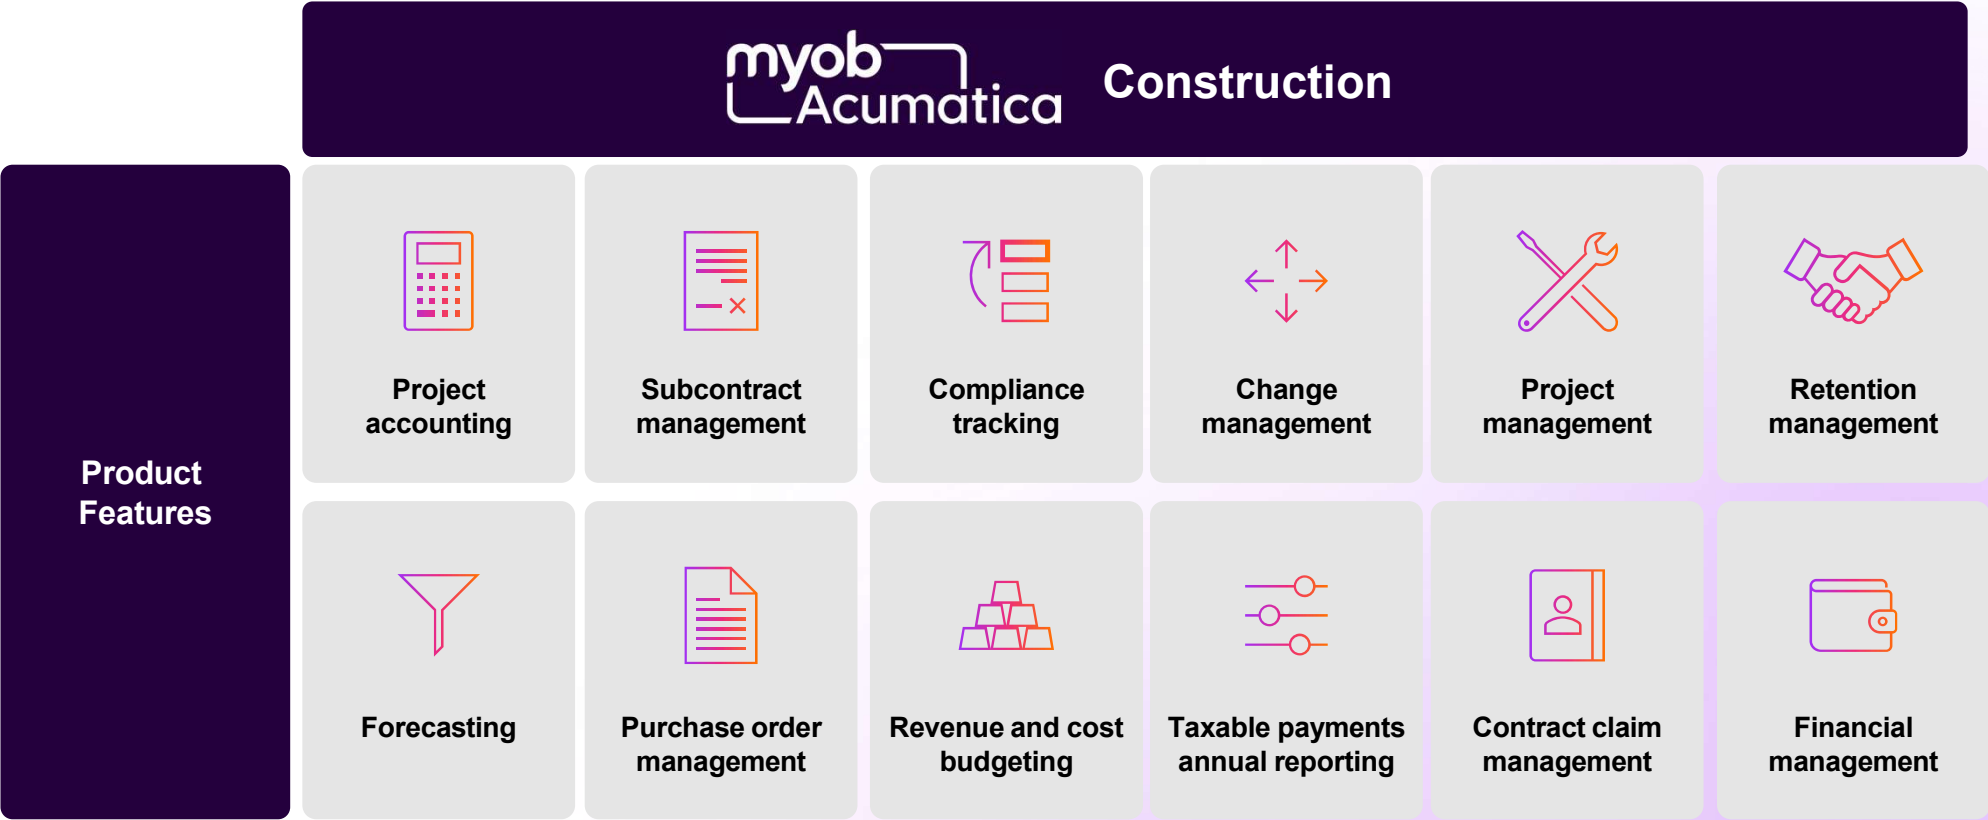

- Requirements
- Payment claims
- Retentions
- Recording work completed and upcoming commitments

Interested parties

- Visibility on progress
- Tracking areas of influence
