Safe Passage offers a low-cost Virtual Remote Security Guard Service specializing in capturing and using license plate information to expedite, control, and track traffic.

- Safe Passage works with police departments to solve crime. Officials can leverage our deep collection of license plates, video footage, and reporting capabilities to locate and find people of interest.

- Safe Passage captures the driver's license and face of drivers.

- Signature license plate recognition so robust it can work seamlessly on your residential lane.

- Expedited visitor processing using our signature license plate recognition on the visitor lane for returning pre-authorized guests.

- Tailgate reporting at the time of the incident.

- Mobile apps for visitor management on Android and Apple.

- Don't want to use another mobile app? We offer a 24/7/365 concierge service for visitor management.

- Live telephone help desk support 24/7/365.

SAFE PASSAGE VIRTUAL ATTENDANT SERVICES

In the fast-paced world of security solutions, Safe Passage Solutions introduces Virtual Guard Services. We aim to redefine security measures for diverse communities and facilities. These Remote Security Services bring forth efficiency, accuracy, and an unmatched commitment to customer service.

- **Live Attendants.** Our attendants respond immediately once the kiosk button is pressed. No wait time.

- **Next Gen Kiosk.** High weather durability, dual microphone speaker, night vision, 135-degree view, with two-way audio.

- **Customizable Services.** Our Virtual attendants will be dedicated to servicing the unique needs of your community.

- **Visitor Lane LPR.** Our LPR cameras will automatically process visitors that have been pre-registered. We will perform a log entry saving the time, destination, tag information. Next, we send text message notification of guest arrival to the resident and open the gate all in just a few seconds of visitor arrival time using Safe Passage technology. Optionally, you can place our LPR System on your residential lane.

- **No Visitor Down Time.** We have multiple virtual attendants processing visitor activities. Our attendants are always available.

SAFE PASSAGE LICENSE PLATE RECOGNITION

Our Automated License Plate Recognition system is your key to hassle-free entry. No more juggling for access cards or struggling with manual processes. We've designed a license plate recognition camera system that works with license plate numbers. Thus, making the entry process swift and straightforward. As a result, the gate processing time is significantly expedited. Also, this automated process lowers the number of accidental entries. This approach to access control can reduce the overall maintenance cost associated with access control as license plates do not require the same level of maintenance other access control technologies do.

- **Verification:** Our specialized software processes these images to extract the license plate numbers accurately. The recognized license plate number is then compared against a database of authorized plates. If there's a match, the system grants access to the vehicle; otherwise, it denies access. LPR systems enhance security by ensuring that only authorized vehicles gain access to restricted areas.

- **Access Control:** Our system can automatically open gates, barriers, and garage doors for authorized vehicles while logging entry activity.

- **Convenience:** LPR eliminates the need for physical access cards or key fobs, making entry smoother for authorized vehicles.

- **Robust Camera:** Our LPR cameras are waterproof and work great when the light is low and are built to last. Details like license plate numbers, images are recorded along with the date and time of occurrence as well as destination — this makes a complete record. In case you've already purchased an LPR camera please check with us as we may be able to reuse it!

SAFE PASSAGE VIDEO MONITORING

Safe Passage Video monitoring uses cameras or surveillance systems to observe and record activities in a specific area or location. This technology is commonly used in various settings for security, safety, and surveillance purposes. Safe Passage supports car dealerships, construction sites, museums, warehouses, HOAs, condos & apartments, education, hotels & resorts, office buildings, parking garages, and shopping centers.

Safe Passage Video monitoring systems typically consist of one or more cameras connected to a recording device, such as a digital video recorder (DVR) or a network video recorder (NVR). These cameras capture live video footage of the monitored area, which can be viewed in real-time or recorded for later review. Safe Passage Video monitoring deters criminal activity, monitors unauthorized access, and helps with investigations dealing with theft, vandalism, or trespassing. It can help monitor potentially hazardous areas, detect safety violations, and provide evidence in case of accidents or emergencies.

- **Enhanced Security:** One of the primary benefits of Safe Passage video monitoring is its ability to enhance security. Video cameras act as a deterrent to criminal activity and provide valuable evidence in the event of incidents such as theft, vandalism, or unauthorized access.

- **Crime Prevention:** Video monitoring systems can help prevent crimes by deterring potential offenders. Cameras can discourage individuals from engaging in illegal activities, thus contributing to a safer environment.

- **24/7 Surveillance:** Video monitoring systems enable continuous surveillance of a location, allowing for real-time monitoring and response to potential security threats or emergencies.

- **Evidence Collection:** Video footage captured by monitoring systems can be valuable evidence in legal proceedings, insurance claims, and internal investigations. High-quality video evidence can help authorities identify suspects, prove liability, and resolve disputes more effectively.

SAFE PASSAGE ON-SITE GUARD

Looking for a guard visitor management system? Safe Passage introduces a cutting-edge security guard management system designed for on-site guards. It seamlessly combines technological sophistication with user-friendly features. Guards equipped with tablets, headsets, and phone capabilities gain comprehensive visibility into residential visitor information. This cloud-based gate management software empowers guards to update visitor and residential data with ease.

- **Real-time Updates:** The system allows security guards to access up-to-date information about scheduled visits, any changes, or cancellations.

- **Resident Database:** Safe Passage maintains a comprehensive database of residents, including contact information, unit numbers, and authorized vehicles. This database should be easily accessible and editable by authorized personnel.

- **Visitor Check-in:** Enable security guards to check-in visitors upon arrival efficiently. This is done through a simple interface that records arrival times.

- **Reporting and Analytics:** Generate reports on visitor activity, including statistics on the number of visitors, peak visit times, and any security incidents. This data can help identify trends and improve security protocols.

- **Mobile Accessibility:** The system is available on a tablet or mobile device, allowing security guards to manage visitor information and monitor activity from anywhere on the premises.

- **User Permissions and Audit Trails:** Safe Passage uses roles and permissions to control access to sensitive information within the system. It also maintains audit trails to track visitor and resident data changes.

- **Data Security and Compliance:** Safe Passage has robust security measures to protect visitor and resident data stored in the system.

- **Make Direct Calls Through the App:** Make phone calls directly from the visitor management system.

- **Integrated LPR:** Retrieve and use translated License plate numbers for tracking visitor and residential information.

SAFE PASSAGE RESIDENTIAL VISITOR MANAGEMENT

Safe Passage visitor management system provides a secure and efficient system for managing guest access. You can efficiently manage your visitors from a browser, our concierge service, or our mobile apps. See below features.

- **Visitor Management:** Allows the resident to add their visitor's information.

- **Text Message Notification Management:** Stay in the loop with text message notifications. Text Messages enhance communication and awareness for residents. This feature ensures that residents are promptly informed about their visitors entering the community.

- **Remote Gate Entry:** Open gates remotely in unique scenarios from our mobile app. This provides added control and convenience for enhanced security measures. This feature is designed to cater to various entry scenarios, ensuring the ultimate level of flexibility.

- **One-Time Entry:** Grant visitors a 'One Time Entry.' This strikes a balance between security and convenience for residents. This feature allows residents to provide one-time access.
