who we are

Secure your association and strengthen community value with cost-efficient solutions designed for the unique needs of neighborhoods, residential developers, and property managers. Envera Systems provides technology-based security systems for community entrances and amenities without being obtrusive to the quality of life for residents. From installation through system implementation, monitoring by our licensed virtual guards, and service, residents can access their lives with Envera as a community's full-service provider.

our solutions

- **virtual gate guard**

Community visitors and vendors are efficiently verified at an entrance with Envera's Virtual Gate Guard. Advanced technology, cameras, and our proprietary software enhance an on-site security guard or allow licensed virtual guards to greet and screen all visitors. Residents of Envera-secured communities easily update their guest lists with MyEnvera, instantly syncing with the system for the guards to see who is and is not authorized.

- **video surveillance**

Provide peace of mind for residents with virtual video surveillance solutions that cover amenities, entrances, and other community assets. Envera's passive camera system captures area footage, including license plates, 24 hours a day. Prevent trespassing and damage at amenities with Active Video Surveillance. This system alerts our virtual guards to after-hours trespassers and allows the guards to voice-down to anyone in the area.

- **access control**

Regulate community access points and resident entrances with Envera's web-based Access Control system. Our database technology allows community staff and property managers to control who is authorized to enter an area and what times they are permitted. Envera's virtual guards help maintain the community database, keeping it up-to-date and accurate.
