

GRTHealth: Empowering Seniors to Age with Dignity and Independence

GRTHealth delivers innovative aging-in-place technology solutions that enable seniors to maintain independence while receiving necessary support. Our comprehensive ecosystem addresses the challenges of an aging population by providing intelligent monitoring, emergency response, and healthcare management tools that work together seamlessly.

Comprehensive Service Offering

At the core of GRTHealth's solution is the **GRTInsight™ Monitoring Platform**, a secure, hardware-agnostic software platform that integrates multiple monitoring devices and systems into a single cloud-based solution. This intelligent system allows a client's health and wellness characteristics to be centrally monitored, enabling the identification of anomalous events historically, proactively, and in real-time. The platform's flexible and modular approach ensures adaptability as technology evolves and the client's needs change.

The **OdysseyGO™ Personal Alert Device** provides seniors with freedom and independence to move securely both at home and away. This cellular-based wearable offers comprehensive protection with GPS location tracking, two-way voice communication, geofencing capabilities, fall detection, and waterproof construction. The device creates a mobile safety net that travels with the user, ensuring help is always available at the touch of a button.

The **GRTH3™ Home Health Hub** delivers integrated 24/7 vital signs monitoring through FDA-approved medical devices. The system monitors critical health parameters including SPO2, weight, blood pressure, pulse, respiration, temperature, and blood glucose. This continuous health monitoring allows for proactive management of chronic conditions and early intervention when concerning trends emerge.

GRTHealth also offers the **Oasis™ In-Home Passive Monitoring**, which utilizes advanced sensor technologies to monitor an individual's interactions with their environment without intrusion.

Sensors can monitor egress points to track a senior's location in a room, activity levels, and potential falls.

For medication management, GRTHHealth offers two solutions that provide 24/7 visibility on medication compliance with remote caregiver support. The system assists in administering complex medication profiles while minimizing incorrect dispensing, with notifications sent to assigned caregivers if medications are missed.

GRTHHealth has partnered with **Sensitek** to provide cellular connectivity for the Odyssey Personal Alert Device and Home Health Hub's tablet, ensuring reliable, high-speed 5G connectivity across the United States. This partnership provides enhanced response time, reliable connectivity, improved location accuracy, seamless data transmission, extended battery life, and a future-ready platform.

Use Case Example: Riverside Senior Living

Riverside Senior Living, a premier senior care facility with 200 residential suites, who implements GRTHHealth's comprehensive solution to enhance resident safety and quality of care while optimizing staff resources.

The facility deploys 350 OdysseyGO™ Personal Alert Devices, ensuring that each resident has access to immediate assistance both within the facility and during outings. For couples, both individuals receive devices, providing personalized protection tailored to each resident's unique needs. The wearable devices have proven particularly valuable for residents with mobility challenges and those who enjoy independent activities outside their suites.

To support residents with chronic health conditions, Riverside incorporates 25 GRTH3™ Home Health Hubs into their care model. These units were strategically placed in suites occupied by residents requiring regular vital signs monitoring, enabling the nursing staff to track health parameters remotely and identify concerning trends before they become emergencies.

For comprehensive environmental monitoring, 100 Oasis™ In-Home Passive Monitoring kits were installed throughout the facility. These systems provide invaluable insights into resident activity patterns, sleep quality, and potential safety concerns without intrusive cameras or microphones. The nursing staff reports that the system has already helped identify several residents showing early signs of cognitive decline through changes in nighttime activity patterns.

To address medication adherence challenges, Riverside deployed 25 Spencer™ Medication Dispenser devices for residents with complex medication regimens. These smart dispensers ensure accurate medication administration while providing staff with real-time compliance data. The system reduces medication errors and decreases the time staff spend on medication management.

All devices connect to the GRTInsight™ platform, creating a unified dashboard that allows Senior Living's care team to monitor resident wellbeing comprehensively. Through this implementation, Senior Living has transformed its approach to resident care, creating an environment where technology supports both independence and safety. The modular nature of GRTHHealth's solution allows the facility to expand capabilities as resident needs evolve, ensuring a future-proof investment in quality care.

Pricing

The table below reflects MSRP pricing as of March 2025.

GRTHealth Portfolio	One Time Cost	Monthly Cost Per Device
Platform		
GRTInsight™ Monitoring Platform	\$13,000.00	INCLUDED
Personal Alert Pendant		
OdysseyGO™ Personal Alert Device	-	\$59.00
Clinical Monitoring		
GRTH3™ Home Health Hub per Kit	\$1,075.00	\$52.00
In Home Monitoring		
Oasis™ Passive Home (up to 5 sensors)	-	\$98.00
Oasis™ (per additional sensor)	-	\$21.00
Medication Adherence		
Karie™ Medication Dispenser	-	\$199.00
Spencer™ Medication Dispenser	-	\$325.00

Take the Next Step

Transform your approach to senior care with GRTHealth's comprehensive solution. GRTHealth's technology empowers seniors to maintain independence while providing caregivers with the tools they need to deliver exceptional care efficiently.
