

Resident Communication & Traffic Management

Included price of your project is full resident notification and traffic management.

Frustration Alleviated

We find that most residents are pleased when they are made aware that their community is investing in the preservation of roadway assets. However, they are not pleased if they find out the day of the project while dodging orange cones on a closed road.

Holbrook Asphalt provides notification to each resident's home 24 to 72 hours prior to the any road closure with a target of time of 48 hrs. The notifications include maps of the areas being closed with specific timetables of reopening.

We go to great lengths to ensure Property Managers and HOA Board Members are not receiving calls about the project in your community. If residents have questions, the notification flyers delivered to each home have at least two mobile phone contact numbers for Holbrook Asphalt personnel responsible for your project.

Managing Closures

Ensuring that residents are disrupted as little as possible is paramount. We go to great lengths to systematically close roads in a manner that maximizes traffic flow and resident access.

The notification flyer delivered to each resident includes a map identifying road closures in the community to eliminate wasted time navigating around road closures.
